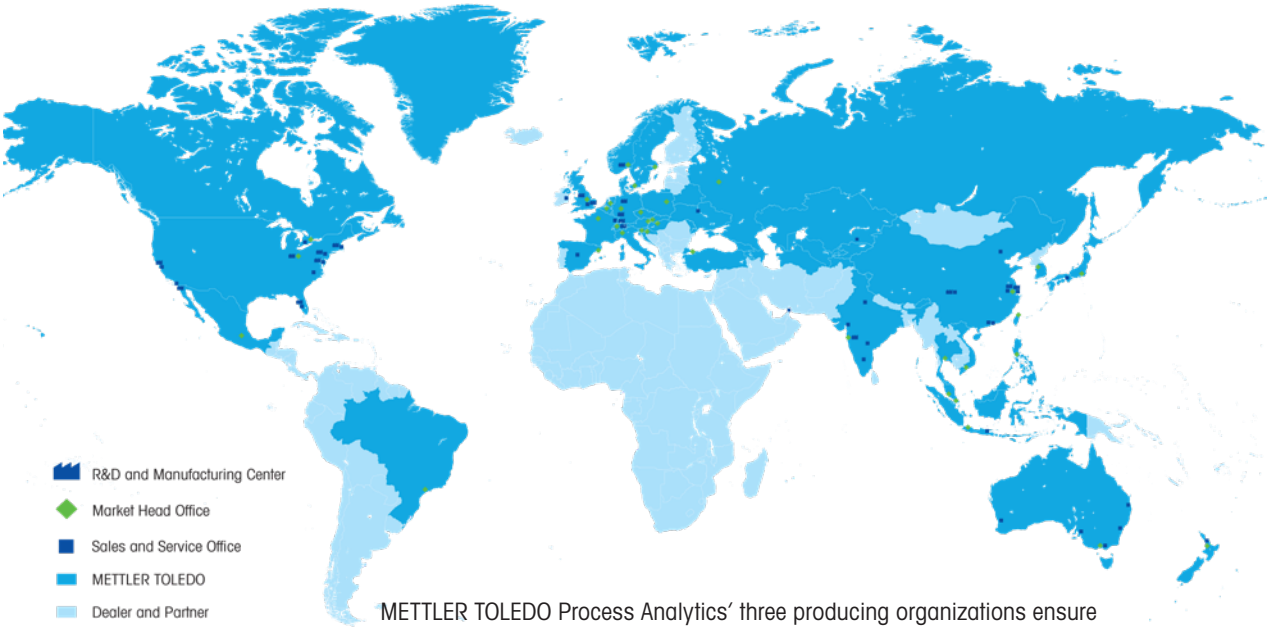
Process Analytics Measurement Solutions
for Industrial Applications

METTLER TOLEDO

METTLER TOLEDO's Distribution Network
Worldwide

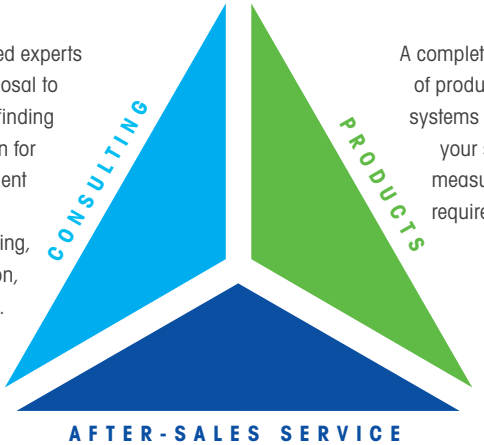
METTLER TOLEDO provides full sales and service coverage worldwide. Wherever our customers are, we are the competent partner. Many global manufacturers rely on our long-standing experience to ensure the highest levels of product and process quality control.



METTLER TOLEDO Process Analytics' three producing organizations ensure faster logistics and response time to market demands in all global regions.

Distribution network
Based at several global production sites, with more than twenty market organizations, and numerous sales representatives, METTLER TOLEDO maintains a distribution network all around the world. Satisfaction of our customers is based on three pillars:
– Consulting
– Products
– After-sales service

Our highly skilled experts are at your disposal to support you in finding the best solution for your measurement application, including planning, product selection, and installation.



A complete range of products and systems to meet your specific measurement requirements.

With our customized, lifelong service management, we are able to assist in managing measurement loops throughout their entire life cycle.

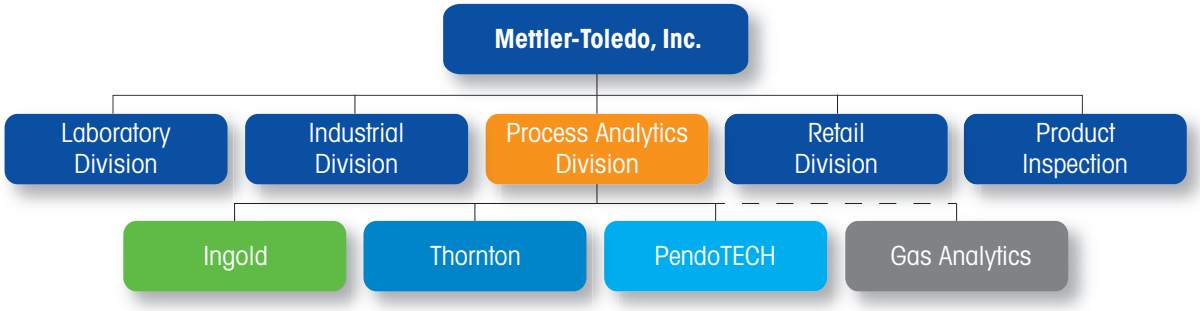
METTLER TOLEDO
The Leader in Process Analytical Measurement

METTLER TOLEDO Group
METTLER TOLEDO specializes in providing precision instruments with the most comprehensive range of services on a global level. With more than 18,000 employees, the company generates annual sales of over US$ 3.9 billion. Mettler-Toledo International Inc. has been listed on the New York Stock Exchange since 1997 (MTD).

METTLER TOLEDO instruments are used for critical research and development applications and also for quality control purposes. The pharmaceutical, microelectronics, chemical, food & beverage, and cosmetic industries are among the principal users.
METTLER TOLEDO enjoys an excellent reputation as an innovator, and currently invests more than US$ 120 million per year in research and development, having increased overall R & D spending. METTLER TOLEDO makes every effort to meet the highest quality standards, resolutely applying Total Quality Management at both the product and process level, but specifically as part of our support for customers to comply with international guidelines.



METTLER TOLEDO Process Analytics
Within the METTLER TOLEDO Group, the Process Analytics division concentrates on analytical measurement solutions for industrial manufacturing processes. The division consists of three business units: Ingold, Thornton and Pendotech, each recognized as leaders in their respective markets and technologies.
Ingold is a worldwide leader in pH, dissolved oxygen, CO_2, conductivity and turbidity solutions for process analytical measurement systems in chemical, food & beverage, biotechnology and pharmaceutical industries. Its core competence is high quality in-line measurement of these parameters in demanding chemical process and hygienic and sterile applications. They also provide an innovative series of TDL gas analyzers for in situ gas monitoring in industrial applications.
Thornton is the leader in pure and ultrapure water monitoring instrumentation used in semiconductor, microelectronics, power generation, pharmaceutical, and biotech applications. Its core competence is the in-line measurement of conductivity, resistivity, TOC, bioburden, dissolved oxygen and ozone in determining and controlling water purity.
Pendotech is a a leader in single-use technology for bioprocessing, with a diverse offering of pressure sensors, control systems and software for measuring, monitoring and data collection in bioprocess applications.

Ingold – Leading Process Analytics

Ingold has a long track record of innovative high-quality solutions for demanding process analytics applications.

Ingold was founded in 1948 by Dr. Werner Ingold. Today, Ingold provides the broadest range of in-line analytical measurement solutions for industrial processes in the biotechnology, pharmaceutical, chemical, and beverage industries. Ingold offers systems for the measurement parameters of pH/ORP, dissolved oxygen (DO), dissolved CO_2, conductivity and turbidity.
Latest developments include optical DO sensors and intelligent in-line sensor management solutions for optimized maintenance management in demanding applications.

Thornton – Leading Pure Water Analytics

Thornton is the market leader in critical ultrapure and pure water analytics, where accuracy and reliability are essential.

Thornton Inc., founded in 1963 by Dr. Richard Thornton, a Professor at Massachusetts Institute of Technology, has been part of the Process Analytics Division since 2001. Thornton offers innovative analytical instruments and sensors for the measurement of resistivity, conductivity, TOC, bioburden, pH, dissolved oxygen (DO), sodium, silica, phosphate, chloride, sulfate and ozone.

Thornton instrumentation is trusted globally in the pharmaceutical, biotech, power generation and microelectronics sectors. With the introduction of its microbial contamination analyzer, Thornton is the world's only producer of conductivity, TOC and bioburden measurement solutions for USP-regulated ultrapure waters.

Gas Analytics – Measure where it really matters

Providing innovative in situ TDL solutions for compact installations, alignment-free and easy-to-use.

In Gas Analytics we provide a broad range of in situ and at-line analytical measurement solutions for industrial processes in the chemical, petrochemical, refining and pharmaceutical industries.
Our innovative sensors and analyzers cover oxygen, carbon monoxide, carbon dioxide, hydrogen sulfide, hydrogen chloride, methane, ammonia and water vapor, with more parameters to come.
The employed tunable diode laser and optical technology combine high measurement accuracy with ease of installation and use.

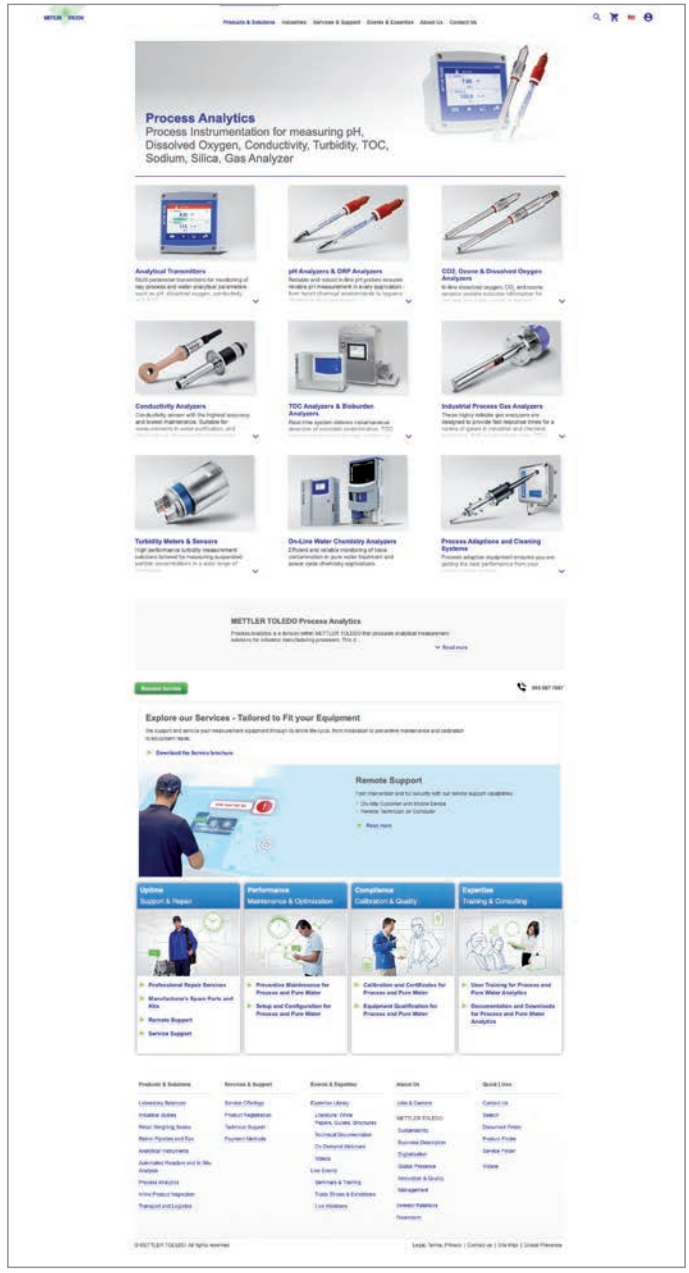
Fast and Competent On-line Support

Visit our website at any time for fast and competent information. The very latest, updated product and support documentation is available in many different languages.

Unlimited access

What you need:
- Fast access to product documentation
- Suitable process analytical solution
- Access to certificates

What we offer:
- Information on products and measurement solutions
- Success stories about our solutions in your industry
- Country specific information and service offerings
- Personalized access
- Multilingual information
- Extensive download offerings



Comprehensive Expertise

www.mt.com/library

When you need analytics expertise to help you with your analytical project, METTLER TOLEDO's Expertise Library provides the content you need. In the Expertise Library includes:
- Customer Case Studies
- Expert Webinars & Interviews
- Technical White Papers
- Practical Application Notes
- Competence Guides
- Product Brochures & Datasheets

Find information on:
- Pharmaceutical processes
- Biotech and hygienic processes
- Chemical and petrochemical processes
- Water purification processes
- Wastewater applications

Customer Service/Technical Service
Seven Reasons to Choose METTLER TOLEDO

Customer service at METTLER TOLEDO strives to provide you with added value including professional product services as well as leading edge technical support.

Our focus is customer success
The METTLER TOLEDO organization has the largest, best-trained global service network in the industry. Our worldwide presence and reputation for outstanding quality make us the logical choice not only to provide classical services but also for services that go far beyond those of other providers.
We understand that customers today are interested in value-added solutions that give them competitive advantages in the marketplace.
And that is what we endeavor to deliver. Providing the highest levels of service and customer satisfaction is very important to METTLER TOLEDO Ingold/Thornton and we understand that you expect not only the highest quality products, but also superior customer and technical support when you need it.
Service from METTLER TOLEDO goes far beyond the initial purchase. We pride ourselves in being available for you, whether it is to answer a technical question, provide details on system operation or to manage requests for service.

When you purchase products from METTLER TOLEDO you have the satisfaction of relying on proven products in your process and having a world class service organization standing behind them.

METTLER TOLEDO offers comprehensive, tailored service plans to meet your needs. Please contact your local METTLER TOLEDO representative for your individual solution.
www.mt.com/contacts

Our customers benefit from
- **Quicker repairs and calibration**
- **Reliable, professional, efficient service**
- **Fast response time**
- **Higher system "uptime"**
- **Innovative and leading edge support services that meet future needs**
- **Regulatory compliance**
- **Improved productivity and enhanced competitiveness**

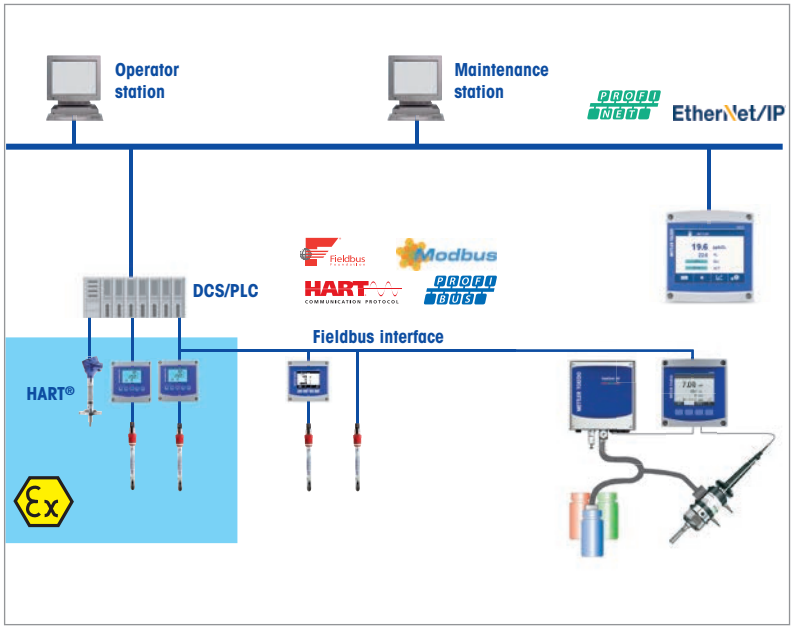
Asset Management and Plant Maintenance
With Fieldbus and High Speed Industry Bus

Open bus integration of your process analytical measurement technology into your control system via digital fieldbus and high speed industry bus technology.

Open fieldbus protocol and industry bus such as HART, Foundation Fieldbus, PROFIBUS, Profinet and Ethernet/IP are currently regarded as standard in the process industry. Only bus technology enables full use of the functional advantages of digital communication to be able to achieve improved resolution of measured values, intelligent instrument diagnostics and new control strategies.

METTLER TOLEDO integration with fieldbus and high speed industry bus

These standardized communication protocols allow a central overview of the whole plant network. In addition, they offer the opportunity of comfortable instrument configuration and a higher level of process information to improve plant performance. Field process instrumentation becomes an integral part of the control and operation level. This technology provides an optimized and continuously available interface for your plant management and maintenance planning.



Integrated device descriptions

Our intelligent analytical instruments include electronic device descriptions (DD) for various process instrument configuration software tools to support seamless integration into the control and engineering level.

Bus communication in connection with asset management and predictive maintenance and information

By applying Ethernet/IP, PROFINET, HART, Foundation Fieldbus or PROFIBUS, seamless integration of advanced Intelligent Sensor Management (ISM) diagnostics information into your process control system is guaranteed.

The use of asset management and predictive maintenance are an important element in improving plant management. The bus technology of Ethernet/IP, PROFINET, HART, Foundation Fieldbus and PROFIBUS supports the online status integration information requirements in an unprecedented way.

ISM – Intelligent Sensor Management
Beyond Process Confidence

ISM™ is a digital technology for process analytics. ISM sensors output highly reliable measurements, which help in maintaining process consistency. Advanced diagnostics data form the sensors can be transferred to wherever required and enable true predictive maintenance.

To ensure production consistency and maintain high product quality, you need accurate and reliable analytical sensors. However, analog sensors have several issues that can negatively impact your production efficiency, such as:

- Not knowing if a sensor is measuring accurately.
- Not knowing if a sensor is suddenly going to fail in the process.
- Sensor measurements that fluctuate due to electromagnetic interference from surrounding equipment.
- Time-consuming calibration at hazardous measurement points.
- Planning and conducting maintenance with limited resources.

ISM solves all these problems.

Measure

ISM sensors utilize METTLER TOLEDO's decades long expertise in process analytics sensor technology to ensure the highest measurement accuracy, regardless of how challenging the process conditions are. Once measured, the sensors' interference-prone analog signal is converted to a robust digital signal before being sent to the connected transmitter.

Built-in health monitoring in ISM sensors mean you always know if they are measuring reliably.

The combination of leading-edge sensor technology and health monitoring ensures you can always fully rely on the measurements from ISM sensors.

Integrate

ISM can be easily incorporated into your facility without major infrastructure investment, time-consuming configuration, or verification efforts. Once integrated, you can receive information from ISM sensors wherever required. Allowing you to…

Check the health of ISM sensors on a handheld device or remotely.

Automatically issue a maintenance order.

And more.

Manage

One of the main issues with analytical sensors has been keeping them properly maintained. And knowing when to conduct maintenance that has been more art than science.

With ISM, you can clearly see the health of your sensors all the time. Advanced predictive diagnostic tools show you how many days remain before calibration, part replacement, or sensor replacement will be needed.

And when maintenance is required, ISM Core PC software guides operators step-by-step through the process.

Process Analytics Measurement Solutions

for Industrial Applications

pH

pH and ORP Systems
For Harsh Industrial to Pure Water Applications

With many decades of experience in designing pH/ORP electrodes, METTLER TOLEDO offers a state-of the-art solution for practically any type of process analytical application.

Functional definition
pH can be described as a measurement of the relative acidity of a solution. Oxidation reduction potential (ORP) as measured with an ORP electrode, provides an indication of the oxidative state of the solution. It is important to measure, and often to control the pH and/or ORP of a solution for several reasons:

- To produce products with consistent well defined properties
- To efficiently produce products at optimal cost
- To avoid health risks
- To protect the environment
- To prevent physical/chemical damage to materials
- To meet regulatory requirements
- To expand scientific knowledge

The accurate measurement of pH/ORP is critical in most industries. Each application has unique physical requirements of chemical, temperature, and pressure resistance and possibly hygienic design. Another factor is what is to be done with the measurement: monitoring only, data logging or process control.

pH electrode selection
It is important to understand the details of the application before selecting a pH electrode. The table on page 15 gives an initial glance at the various electrodes available and typical applications. Selection of a pH electrode requires a thorough knowledge of the process. Once the requirements are known, comparison of the electrode specifications detailed in this catalog will identify the appropriate sensor.

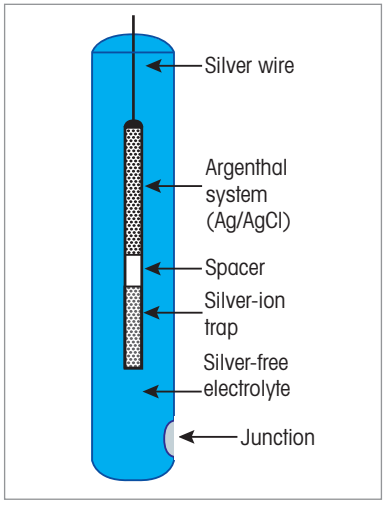
This table serves as an initial selection guide to suitable Ingold pH sensors for given applications. Since process conditions vary considerably at different stages of production, it is necessary to refer to the detailed technical specifications of the electrode to ensure compatibility.

METTLER TOLEDO pH Electrodes

The Problem Solvers…Through 70 Years of Innovation!

The design of the pH electrode reflects the potential problems each application may present. On these two pages, application questions are raised, and the METTLER TOLEDO Ingold solutions are described.

Is frequent steam sterilization or autoclaving a requirement?
When frequent steam sterilization, autoclaving, or other dramatic process temperature cycling is encountered, the "Argenthal™" reference system maintains a constant concentration of silver chloride at the reference electrode silver wire, providing stable and repeatable reference voltages.



Reference electrode
Argenthal system/silver-ion trap

Does the sample contain components which could react with the reference electrolyte?
One source of problems is the reaction of silver-ions in the reference electrolyte with sulfide or other complexing compounds in the sample medium. The unique Ingold internal "silver-ion trap" prevents silver ions from entering the bulk electrolyte. Alternatively, use of "double junction" electrodes and selection of specialized electrolytes also serve to ensure chemical compatibility.

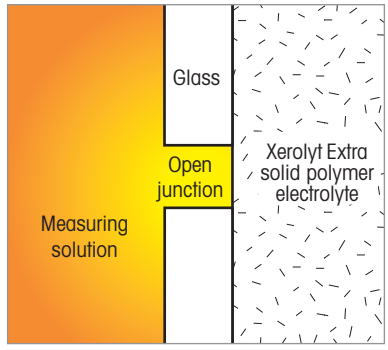
What are the temperature and pressure requirements of the installation?
Temperature and pressure requirements of a process must be met to ensure safe operation of the system as well as accurate performance of the electrode. Electrodes are available with specifications as high as 13 bar at 130 °C (188 psig at 266 °F) to handle aggressive process situations.

What glass formulation is appropriate?
Numerous formulations of pH-sensitive glass have been developed to overcome application problems. "High Alkali" glass greatly reduces "sodium ion error" expanding the usable pH range from pH 12 of general purpose glass to pH 14. "Low Temperature Glass" allows continuous use at low temperatures which

present high impedance problems with standard glass. "HF-resistant glass" permits use of glass electrodes at HF levels which rapidly dissolve normal glass electrodes.

What are the physical requirements?
Among physical considerations are length, connector type, and installation. Electrodes are commonly available in lengths from 120 mm to 425 mm or longer to ensure sufficient immersion depth into the process. Improvements in electrode connector technology over the years have resulted in numerous connector configurations. Polymer body "industrial pH sensors" serve as their own housing, fitting directly into threaded connections.

Which type of reference electrolyte should be used?
Liquid reference electrolytes provide high flow through the junction keeping it clean and providing the highest accuracy and precision, and are refillable for longer life. Use of pressurized gel electrodes prevents process solutions from entering the reference electrolyte, are more compact and reduce maintenance. Solid polymer electrolytes are in direct contact with the sample medium without requiring a ceramic junction, eliminating fouling problems.



InPro X1
Unbreakable Sensors for Hygienic Applications

InPro X1 HLS

ISM

With its unbreakable* X-Chip™ technology, the InPro X1™ HLS offers extremely safe and highly reliable pH measurement for food or beverage production processes. The sensor's low drift and long lifetime reduce maintenance, calibration and replacements costs. Its rapid response to pH changes improves process control, leading to lower consumption of additives and shorter batch times.

Intelligent Sensor Management (ISM™) digital technology provides predictive diagnostics, such as the Dynamic Lifetime Indicator (DLI), interference-free signal transmission, fast Plug and Measure installation and easy calibration with ISM Core software.

* The InPro X1 has passed the US military's MIL-STD-810H drop test.

Specifications

ISM (Digital) or Analog	ISM (Digital)
pH Sensing Technology	Composite X-Chip
pH Range	0–14
Reference System	Pre-pressurized liquid electrolyte, ceramic diaphragm, Argenthal cartridge with silver-ion trap
Operating Temperature (for Cleaning)	0–80 °C (100 °C)/32–176 °F (212 °F)
Operating Pressure	0–4 barg/0–58 psig
Process Connection	Pg 13.5 thread
Temperature Sensor	Digital
Shaft Material	Food-grade PEEK
Solution Ground	12 mm
Sensor Length	120 mm, 225 mm
Hazardous Area Approvals	Yes (see Certificates and Approvals below)
Hygienic/Biocompatibility Approvals	Yes (see Certificates and Approvals below)
Sterilizable/Autoclavable	No
Primary Media/Application	Food/Beverage Production
Certificates & Approvals	CE, EHEDG, 3A, EC1935/2004, ATEX/IECEx: Ex ia IIC T6/T5/T4/T3 Ga/Gb, FM: IS Cl. I, II, III, Div 1, GR ABCDEFG/T6, PED, METTLER TOLEDO Quality Certificate

Intelligent Sensor Management (ISM)
pH electrodes with integrated ISM functionality allow Plug and Measure and advanced diagnostics. ISM simplifies the installation, handling and maintenance of measurement equipment. For more information see ISM introduction pages 10–11.

Features Overview
- Fully autoclavable or sterilizable in-situ
- Gel electrolyte reduces maintenance
- Resistant to poisoning substances
- EHEDG certified
- Pressure resistant up to 6 barg (87 psig)
- Watertight connector (IP 68)
- Integral temperature sensor permits automatic temperature compensation

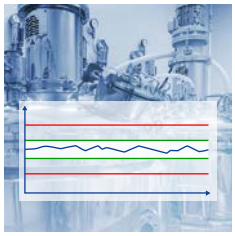
InPro X1 HLS-N200-K120	120 mm	30 389 700
InPro X1 HLS-N200-K225	225 mm	30 389 701

Resists Clean-in-Place Processes

The InPro X1 HLS is the first food-safe, in-line pH sensor that withstands cleaning without sacrificing accuracy or sensor lifetime.

Eliminates Risk of Glass Contamination

The unbreakable X-Chip pH-sensing technology enables in-line pH measurement without the risk of contamination by glass fragments.



Improve Product Yield and Quality

Real process control through precise inline pH measurement leads to improved product quality, yield and shorter batch times.

Meets All Major Food Regulations

The InPro X1 HLS has a hygienic design, with all materials selected for food or beverage contact applications. Available certificates include 3A, EHEDG, EC1935/2004, ATEX and FM.

InPro 2000 (i)
For the Most Extreme Requirements

InPro 2000 InPro 2000 i/SG

The InPro 2000 (i) is a combination pH electrode with an integral temperature sensor designed for highly demanding applications. Three liquid electrolytes are available adding versatility; 3M KCl is a classic electrolyte offering high flow for improved junction cleaning, Viscolyt™ has limited flow for reduced maintenance needs, and Friscolyt™ is ideal for process media with high protein or organic solvent content, and in low temperatures. Applications range from biotechnical processes requiring in-situ sterilization to dirty industrial processing chemicals.

Specifications

pH range	0 – 14 pH
Temperature	0 to 140 °C (32 to 284 °F)
Operating pressure	0 to 6 barg, 0 to 87 psig (in pressurized housing)
Cable connection	ISM: K8S; Analog: VP
Process connection	METTLER TOLEDO Housing Adapter
Reference system	Argenthal with silver-ion trap
Type of junction	Ceramic junction
Reference electrolyte	Selectable; 3M KCl, Viscolyt, or Friscolyt
Lengths	120 mm, 150 mm, 250 mm, 450 mm
Lower shaft diameter	12 mm
Temperature sensor	ISM: Digital; Analog: Pt 100 or Pt 1000
Sterilizable	Yes
Autoclavable	Yes
pH membrane	High alkali glass (HA)
Certificates and Approvals	METTLER TOLEDO Quality Certificate, Pressure Equipment Directive guidelines (PED) 97/23/EC, ATEX: Ex ia IIC T6/T5/T4/T3 Ga/Gb, FM: IS Cl. I, II, III, Div 1, GR ABCDEFG/T6

Intelligent Sensor Management (ISM)
pH electrodes with integrated ISM functionality allow Plug and Measure and advanced diagnostics. ISM simplifies the installation, handling and maintenance of measurement equipment. For more information see ISM introduction pages 10 – 11.

Features Overview

- User-selectable reference solution allows optimum compatibility with process media
- Flowing liquid electrolyte ensures fast response and accurate pH measurement
- Silver-ion trap prevents sulfide poisoning of junction
- Refillable electrolyte extends operational life
- Domed glass membrane impedes bubble formation for greater reliability
- Integral temperature sensor, more accurate temperature compensation
- ATEX and FM certification for hazardous areas

InPro 2000 (i) Electrolytes

To cope optimally with the conditions prevailing in different types of chemical processes, a wide variety of electrolytes is available:

9816 Viscolyt
Mostly frequently used CP electrolyte with limited outflow and therefore long refill intervals.

9823 KCl
Classic electrolyte with high electrolyte outflow for improved diaphragm cleaning.

9848 Friscolyt
Used for media with proteins/organic solvent content.

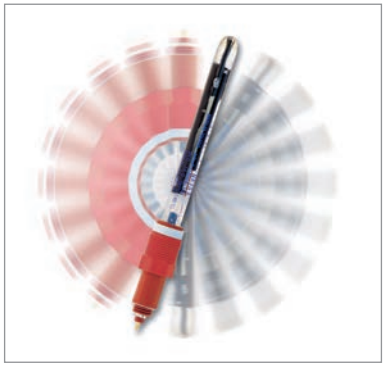
InPro 3100 (i)
Versatile and Robust

InPro 3100 InPro 3100 i



Also available for upside-down installation as InPro 3100 (i) UD.

The InPro 3100 (i) is a combined pH electrode with temperature sensor designed specially for in-line pH measurements in bio-processes where CIP and SIP are used. This rugged gel-filled electrode provides fast and precise measurements, even after repeated autoclaving or sterilization cycles at 140 °C (284 °F). The electrode utilizes METTLER TOLEDO's silver-ion trap, keeping the reference junction clear even in the presence of sulfide-bearing solutions. With the InPro 3100 (i) UD, upside-down mounting is possible.

Specifications

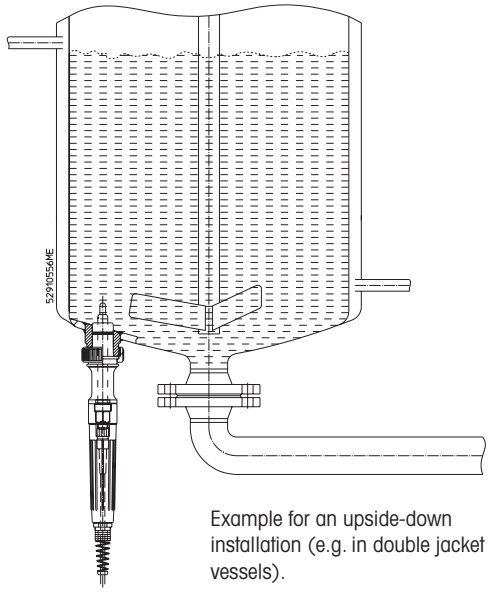
Did You Know

All pH electrodes, even those with gel or solid polymer reference systems, contain a liquid electrolyte in the pH half cell which must be in contact with the internal silver wire in order for the sensor to measure accurately.
Sensors therefore must be installed at least 15° from horizontal to prevent air bubble interference. Exception: the InPro 3100 (i) UD "upside-down" electrode.



Example for an upside-down installation (e.g. in double jacket vessels).

Suitable Housings **p.**

InPro 3250 (i)

Highest Performance, Highest Accuracy

InPro 3253 InPro 3250 i

The InPro 3250 (i) family is a pre-pressurized, liquid-filled, low-maintenance pH sensor with temperature sensor for in-line measurements in demanding applications. Its durable design is well suited for harsh chemical process conditions or to meet the stringent demands of sterile biotech applications where CIP and SIP are used. These rugged electrodes lead the industry for fast and precise measurements, even after repeated autoclaving or sterilization cycles at 140 °C (284 °F). The InPro 3250 (i) family is available with an expanded selection of different pH-sensitive glass membranes. This guarantees the best possible measurement performance under the most diverse operating conditions, both in chemical and biotech processes. The platinum-auxiliary electrode (solution ground) which functions to eliminate ground loop problems, allows for use of advanced sensor diagnostics, or can be used as an ORP (redox) sensor.

Specifications

pH range	0 – 14 pH InPro 3250 (i); 0 – 12 pH InPro 3253 (i); 1 – 11 pH InPro 3251 (i), InPro 3252
Temperature	0 to 100 °C (32 to 212 °F) InPro 3250 (i), InPro 3253 (i); – 25 to 80 °C (– 13 to 176 °F) InPro 3251 (i); 0 to 80 °C (32 to 176 °F) InPro 3252 (i)
Operating pressure	0 to 4 barg (0 to 58 psig)
Cable connection	ISM: K8S; Analog: VP
Process connection	Pg 13.5 thread
Reference system	Argenthal with silver-ion trap
Type of junction	Ceramic junction
Reference electrolyte	Pre-pressurized liquid
Lengths	120 mm, 225 mm, 325 mm, 425 mm
Shaft diameter	12 mm
Temperature sensor	ISM: digital Analog: Pt 100 or Pt 1000
Sterilizable	Yes, up to 140 °C (284 °F)
Autoclavable	Yes
pH membrane	Various by applications
Certificates and Approvals	METTLER TOLEDO Quality Certificate, Pressure Equipment Directive guidelines (PED) 97/23/EC, ATEX: Ex ia IIC T6/T5/T4/T3 Ga/Gb, FM: IS Cl. I, II, III, Div 1, GR ABCDEFG/T6

InPro Sensor Designation

The last digit of the InPro designation indicates the pH glass type:

00: High alkali glass (HA)
01: Low temperature glass (LoT)
02: Hydrofluoric acid resistant glass (HF)
03: Steam sterilizable glass (A41)

Suitable Housings **p.**

InSUS 310i – Single-use pH Sensor
Highest Integrity and Reliability

ISM
CE
UK CA
USP Class VI

InSUS H30i mounted on sensor

The measurement principle of the InSUS 310i single-use pH sensor is based on proven potentiometric pH glass technology and offers identical reliability and accuracy as reusable pH sensors. The sensors are gamma and X-ray sterilizable and factory calibrated for convenient installation and operation in single-use process devices such as bioreactors and mixing bags for biopharmaceutical manufacturing. Their robustness ensures sensor and bag security during bag storage, transport, and startup.

For efficient process integration, the InSUS 310i is operated together with the reusable sensor head, InSUS H30i. This pairing offers the same connectivity and signal integration options as our reusable InPro ISM pH sensors. The identical operational interface leads to convenient and flexible usage of InSUS and InPro sensors in single-use devices, without any modification of the installed process transmitter or controller environment.

Features Overview

- Installation in standard weld-in bag ports
- Gamma and X-ray irradiation sterilizable
- 30-month shelf life
- Wetted parts in accordance with USP Class VI standards
- Round-edged protective guards around glass elements
- Mixed-mode operation: analog/digital with InSUS H30i
- Plug and Measure
- Reliable measurements
- Long in-process lifetime

Specifications

InSUS 310i	
Measurement principle	Potentiometric
Measurement range	pH 3 – 10
Accuracy	±0.10 pH for ±1.50 pH units around calibration point after 1-point process calibration
Response time	t90 % < 20 s between pH 4 – 7
Design	
Body material	HDPE
Wetted O-ring	EPDM
Bag port (process connection)	Eldon James weld-in port with 1" barb
Cable connector	VP6
Temperature probe	Pt1000
Signal interfaces	Analog, digital when paired with InSUS H30i sensor head
Operating Conditions	
Maximum shelf life	30 months (dry storage)
Sterilization method	Gamma and X-ray irradiation 25 … 45 kGy
Temperature range during measurement	5 to 60 °C (41 to 140 °F)
Mechanical pressure resistance during measurement	Up to 2 barg/40 °C (29 psig/104 °F)
Material Compliances	USP 87, USP 88 Class VI (pre- and post-gamma), wetted polymers: absence of animal-derived materials, BPA, DEHP and Latex
Certificates and Approvals	METTLER TOLEDO Quality Certificate, CE, UKCA

Did You Know

InSUS 310i sensors are also offered by leading single-use process device manufacturers as fully integrated component in their irradiation sterilized bioreactors.

Did You Know

A special passivation treatment of the InSUS 310i reference electrode avoids loss of electrolyte during dry storage. This leads to the highest bag integrity with regards to preventing traces of electrolyte in empty bags.

InPro 4010
With Solid Polymer Electrolyte

The InPro 4010 is a low maintenance, economical pH sensor targeted towards industrial wastewater processes. It is available with an internal temperature sensor for accurate temperature compensation in a single unit. The solid polymer electrolyte is in direct contact with the sample medium, eliminating potential for junction fouling. The plastic body makes this a rugged sensor with reliable performance in contaminated liquids.

Specifications

pH range	2 – 12 pH
Temperature	0 to 60 °C (32 to 140 °F)
Operating pressure	1 barg at 60 °C (15 psig @ 140 °F)
Cable connection	VP
Process connection	Pg 13.5 thread
Reference system	Argenthal
Type of junction	Open aperture, double junction
Reference electrolyte	Solid polymer
Lengths	120 mm
Shaft diameter	12 mm
Temperature sensor	Pt 100, Pt 1000 or none
Sterilizable	No
Autoclavable	No
pH membrane	General purpose glass
Certificates and Approvals	METTLER TOLEDO Quality Certificate

Open reference junction

www.mt.com/InPro4260

Features Overview
- Xerolyt Extra polymer electrolyte
- Open junction eliminates clogging
- Resistant to poisoning substances
- Expanded pH range covers 0–14 pH
- Resistant to solvents, strong acids and alkali
- Domed glass membrane impedes bubble formation for greater reliability
- Integral temperature sensor
- ATEX and FM certified for hazardous areas
- InPro 4281i electrode is made with a rugged titanium shaft, providing exceptional chemical resistance and durability.
- InPro 4281i features a flat pH membrane suited for fibers and high solids samples

Did You Know

The InPro 4260 (i) family now also includes a hydrofluoric acid resistant glass formulation. The solution ground stabilizes the high impedance pH signal and provides an additional reference point for sensor diagnostics which can detect changes in performance due to influence of the media.

InPro Sensor Designation

The last digit of the InPro designation indicates the pH glass type:

00 – High alkali glass (HA)
01 – Low temperature glass (LoT)
02 – Hydrofluoric acid resistant glass (HF)
03 – Steam sterilizable glass (A41)

Suitable Housings **p.**

pH

InPro 4550/InPro 4501
The Rugged Solution

InPro 4550

InPro 4501 VP

The InPro 4550/4501 are rugged, low maintenance, combination pH/temperature sensors, designed to handle harsh chemical processes and industrial wastewater applications. The durable polymer body houses a solid polymer reference electrolyte, making the electrode robust from both physical and chemical attack. A solution ground prevents ground loop problems and allows advanced sensor diagnostics. The solid polymer electrolyte is in direct contact with the sample medium, eliminating potential for junction fouling. The InPro 4501's flat glass pH membrane is protected against breakage and is self-cleaning in flowing applications. The higher pressure/temperature specifications of the InPro 4550 target demanding applications with heavily contaminated media and aggressive industrial chemicals.

Specifications

Features Overview

- High pressure/high temperature rating 12 barg @ 130 °C (174 psig @ 266 °F)
- Very long diffusion path using two electrolyte chambers
- PTFE annular junction repels dirt
- Resistant to strong oxidizing agents, solvents, acids and alkali, and to poisoning substances
- Integral temperature sensor
- InPro 4801(i) and InPro 4881i feature a flat pH membrane suited for fibers and high solids samples
- ATEX and FM certified for hazardous areas
- InPro 4881 i electrode is made with a rugged titanium shaft, providing exceptional chemical resistance and durability.

InPro Sensor Designation

The last digit of the InPro designation indicates the pH glass type:

00 – High alkali glass HA)
01 – Low temperature glass (LoT)
02 – Hydrofluoric acid resistant glass (HF)
03 – Steam sterilizable glass (A41)

Quick Tip

A combination pH electrode should never be stored dry as this will dehydrate the electrode. Also, do not store an electrode in deionized water, rather, soak the electrode in the pH buffer or electrolyte recommended in the electrode manual.

Did You Know

The InPro 4801 (i) SG electrode features a unique flat glass membrane ideal for applications with high fiber or solid concentrations.

pH

InPro 4850 i
For the Toughest Chlor-Alkali Processes

InPro 4850 i is a combination pH electrode featuring a sodium membrane glass that uses the sodium concentration in the process (brine) as a reference. The difference in electrical potential between the pH-glass and the sodium reference glass is converted into the pH value. The sodium reference system is highly resistant to chlorine and other oxidizing agents. This makes the sensor very well suited for the demanding process conditions in chlor-alkali production. Solution ground and shielding eliminate interference, and enable redox measurement. Digital signal conversion ensures 100 % signal integrity and stability. Intelligent Sensor Management (ISM) technology simplifies sensor handling and reduces sensor lifecycle costs.

Specifications

pH range	0 – 14 pH
Temperature	– 10 to 120 °C (14 to 248 °F)
Operating pressure	0 to 12 barg @120 °C (0 to 174 psig @ 248 °F)
Cable connection	ISM: K8S
Process connection	Pg 13.5 thread
Reference system	Sodium sensitive glass membrane
Type of junction	None
Lengths	120 mm, 225 mm
Shaft diameter	12 mm
Temperature sensor	Digital
Sterilizable	No
Autoclavable	No
pH membrane	High alkali glass (HA)
Min. Na+ concentration	10 mg/L when pH > 7; 100 mg/L when 7 > pH > 2; 1 g/L when pH < 2
Storage solution	Storage solution buffer pH = 4.01/Na 3.9 M (P/N 52 004 103)
Certificates and Approvals	METTLER TOLEDO Quality Certificate, Pressure Equipment Directive guidelines (PED) 97/23/EC ATEX: Ex ia IIC T6/T5/T4/T3 Ga/Gb, FM: IS Cl. I, II, III, Div 1, GR ABCDEFG/T6

Intelligent Sensor Management (ISM)
pH electrodes with integrated ISM functionality allow Plug and Measure and advanced diagnostics. ISM simplifies the installation, handling and maintenance of measurement equipment. For more information see ISM introduction pages 10 – 11.

InPro 4850 i requires a near stable sodium concentration for the best measurement results. A 10 % difference in brine concentration leads to 0.05 pH error.

Features Overview
- Hermetically sealed reference system resistant to any effects from poisoning substances such as chlorine.
- Very high resistance to oxidizing media, solvents, and acid or alkali solutions.
- Reliable operation in processes with particularly high pressures and high temperatures.
- Platinum solution ground (SG) electrode enables redox (ORP) measurement and advanced sensor diagnostics, as well as preventing measurement errors due to ground potentials.

Puncture pH Electrodes
For Cheese and Meat Products

Puncture pH electrodes are specially designed for quick, accurate pH measurement in meat, sausage, cheese, and fruit. The rugged needle-shaped sensing membrane penetrates directly into the medium, without requiring time-consuming sample preparation. The solid polymer reference system eliminates clogging by fats and proteins using an open junction design. The non-refillable reference electrolyte reduces maintenance to a minimum.

Specifications

pH range	2 – 11 pH
Temperature	0 to 80 °C (32 to 176 °F)
Response time	< 20 s (98 % between pH 4 to 7)
Materials of construction	Glass/PBT (shaft)
Membrane resistance	< 250 MΩ (25 °C/77 °F)
Type of membrane glass	LoT
Temperature sensor	None
Diaphragm	One open aperture junction
Reference system	Argenthal system
Reference electrolyte	Xerolyt Extra solid polymer
Cable and connections	S7-type
Shaft dimensions	Length: 25 mm Diameter: 6 mm
Sterilizable	No
Autoclavable	No
Certificates and Approvals	METTLER TOLEDO Quality Certificate

Pro2Go Portable pH/ORP Meter

Simple, Robust and Mobile

ISM

For periodic pH or redox measurements, a mobile meter is the ideal choice. Designed for laboratory and industrial applications. The intuitive menu on Pro2Go™ ensures out-of-the-box operation for anyone. The meter's ergonomic design allows one-handed operation for both big and small hands. Its light weight makes measurement easy and convenient, even over lengthy periods of repeated measurement.

Pro2Go is compatible with both analog and digital ISM sensors. Its ISM features include Plug and Measure for error-free setup, and display of sensor diagnostics including DLI, ACT and TTM, so operators know when sensor calibration or replacement will be required.

The Pro2Go includes a datalogger that stores up to 2000 measurement data sets and computer interface for easy collection of data from the field.

Features Overview

- Supports analog, puncture and ISM sensors
- ISM diagnostics
- Calibration timer alerts when calibration is due
- Rugged housing for industrial use

Other Highlights

- Measures pH, ORP and temperature
- IP67 rated housing
- Weatherproof USB interface for data exchange

Specifications

Measurement parameters	pH, mV and temperature
Sensor type	Analog and ISM sensors
pH measuring range	−2.00 to +20.00 pH
mV range	−2000 to +2000 mV
Temperature input	NTC30K
Temperature measuring range	ATC: −5 to 130 °C (+23 to 266 °F) MTC: −30 to 130 °C (−22 to 266 °F)
Predefined buffer groups	9
Automatic buffer recognition	Yes
Calibration	1-point (offset), 2-point (slope and offset)
Supply voltage batteries	4 × LR6/AA 1.5 V Alkaline or 4 × HR6/AA 1.2 V NiMH rechargeable
Battery life (standby)	200 to 250 hrs
Supply voltage (USB powered)	Connection: Micro-USB Rating: 5 V DC, 100 mA
User interface	Graphic LC Display
Languages	10 (English, German, French, Italian, Spanish, Portuguese, Russian, Chinese, Korean and Japanese)
PC connection	Micro-USB for Data transfer and power
Memory size	2000 datasets (GLP conform)
Dimensions	Height × Width × Depth: 222 × 70 × 35 mm (8.74 × 2.76 × 1.38 inch)
Weight	0.29 kg (0.64 lb)
Material	• Housing: ABS/PC reinforced • Window: Polymethylmethoacrylate (PMMA)
Enclosure rating	IP 67
Range of application	For indoor and outdoor use
Approvals	CAN/CSA-C22.2 No. 61010-1-12 UL Std. No. 61010-1 (3rd Edition)

Dissolved Oxygen Measurement Systems
High Reliability and Wide Application Coverage

Real-time, continuous measurement of dissolved oxygen (DO) is central to the efficiency of many industrial processes. METTLER TOLEDO offers a range of robust DO sensors that utilize a well-established electrochemical measuring principle, plus sensors with the latest optical technology for applications where simplicity of operation is particularly important.

Measurement of dissolved oxygen
Proper oxygen levels are important in many processes in biotechnology, pharmaceutical development, food and beverage, chemical manufacturing, and in water and primary waste treatment. Control of dissolved oxygen helps ensure product quality, reduce costs, and provide maximum product yield.

Optical measurement solutions from METTLER TOLEDO
The heart of the optical sensor is an oxygen-sensitive layer containing immobilized marker molecules. They absorb light from a light emitting diode and are able to release this energy as light at a different wavelength (fluorescence). The fluorescence depends on the amount of oxygen that is present in the environment of the marker molecules. This effect allows determination of the oxygen concentration in the sample media.

Advantages of optical oxygen technology
The optical oxygen sensors offer a highly accurate oxygen measurement with enhanced signal stability and fast response time. The sensors are fully steam sterilizable, autoclavable and fulfill all industrial requirements for hygienic design and traceability. Since no electrolyte exchange or sensor polarization is needed, sensor maintenance is easy and less error-prone. This sensor type takes advantage of ISM technology.

Electrochemical oxygen sensors
The large portfolio of Ingold amperometric sensors fulfill the highest industrial requirements in performance and design to accommodate virtually any application. They are equipped with the unique ISM technology.

Transmitter selection
Several Ingold transmitters are available to work in conjunction with our amperometric and optical sensors including the multi-parameter transmitter lines M100, M200, M300, M400 and M800.

Housings and socket selection
The widest selection of stationary, retractable and submersion housings is provided to match virtually any process connection. Vessel ports or sockets are used as entry points for the oxygen sensor. METTLER TOLEDO provides a host of ports including the original Ingold 25 mm port which is recognized as a standard in the biotech and pharmaceutical industries.

Professional service and validation
Sensor service includes rebuilding, cleaning, testing, and recertification of your Ingold sensor, done quickly and efficiently to minimize downtime. Validation and testing of oxygen equipment is done with equipment traceable to NIST.

Integration flexibility
Optical sensors can be integrated directly using their analog (mA-HART) or digital (Modbus) interface.

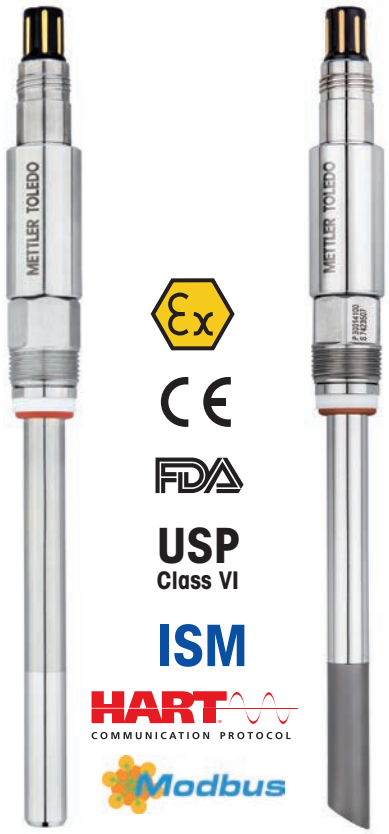
InPro 6860 i Optical Oxygen Sensor

Easy Handling, Exceptional Performance



InPro 6860 i InPro 6860 i HD

Combining innovative ISM technology with high-end optical measurement, METTLER TOLEDO offers optical oxygen sensors fully suitable for biopharma applications. The InPro 6860 i offers highly accurate oxygen measurement with enhanced stability, and easy handling without electrolyte change or time-consuming polarization procedures. The sensor is equipped with a digital interface (digital ISM and Modbus RTU) plus analog output signal for direct integration into existing biocontrollers, analog transmitters and into process environments including HART communication protocol.

Integrates ISM technology

With ISM, the installation, maintenance, and safety of the system is drastically improved. All sensor relevant data are stored in the sensor. Pre-calibrated systems transfer the data automatically to the transmitter and are therefore ready for measuring within seconds. Changes in the measuring system are monitored via the Dynamic Lifetime Indicator. With these features, error-free and safe operation of the sensor and the transmitter is assured. For more information see ISM introduction pages 10–11.

Features Overview

- Plug and Measure
- Outstandingly fast service
- Immediate availability without need of polarization
- No electrolyte handling
- Low detection limit
- Highest signal stability
- Fast response time
- All wetted parts in accordance to FDA and USP Class VI-standards
- Sterilizable and autoclavable
- Hygienically polished surface
- Digital ISM technology

Specifications

Performance	
Operating range	0 ppb to saturation (3 bar)
Accuracy	≤ ± [1 % + 8 ppb]
Response time at 25 °C (77 °F) (Air → N_2)	98 % of final value in <90 s
Construction	
Measuring principle	Fluorescence quenching
Cable connection	VP8

Did You Know

The optical oxygen sensors can be used in conjunction with all M400 and M800 transmitters as well as with existing analog and digital Modbus installations.

OptoCap replacement

OptoCap – BT02T electropolished, delivers a hygienically polished surface.

OptoCap – BT02THD stabilizes the measurement signal by it's hydrophilic surface by avoiding air bubble interference. Angled Version optimized for Benchtop Fermenter installation where sensors are installed vertically.

OptoCap – BT02TFHD stabilizes the measurement signal by it's hydrophilic surface by avoiding air bubble interference. Flat Version for use with large bioreactors where sensors are installed horizontally.

Did You Know

Oxygen bubble interference can be a common issue when optical oxygen sensors are installed vertically. The new OptoCap™ (BT02THD) with its proprietary design has a surface treatment that efficiently reduces these interferences. This allows greater production control leading to consistent yield, batch to batch.

Suitable Housings **p.**

InSUS 607/InSUS H60i – Single-use Sensor

Flexible Integration and Operation

InSUS 607 sensor

InSUS H60i sensor head

The measurement principle of the InSUS 607 single-use dissolved oxygen (DO) sensor is based on proven optical spot technology and offers identical reliability and accuracy as METTLER TOLEDO's reusable optical DO sensors. These single-use sensors are gamma and X-ray sterilizable for secure installation and operation in single-use process devices such as bioreactors, harvesting, and storage bags for biopharmaceutical manufacturing.

An InSUS 607 sensor is operated together with a reusable sensor head, InSUS H60i. This pairing offers the same connectivity and signal integration options as our reusable InPro 6860i optical DO sensor (page x-y). The identical operational interface leads to convenient and flexible usage of InSUS and InPro sensors in single-use devices, without modifying the installed process transmitter or controller environment.

Features Overview

- Installation in standard weld-in bag ports
- Gamma and X-ray irradiation sterilizable
- Three-year shelf life
- Wetted parts in accordance with USP Class VI standards
- No need for autoclaving
- Plug and Measure
- Digital and analog signal interfaces
- Long term measurement stability

Specifications

InSUS 607	
Measurement principle	Optical (fluorescence quenching)
Measurement range	0 … 250 % air
Accuracy	< 2.5 % for the range 50 … 100 % air after 1-point calibration in 100 % air, < 1 % after 2-point calibration in 100 % air and 0 % oxygen
Response time	25 °C (77 °F) air → nitrogen, t98 % < 30 s
Design	
Body material	HDPE
Wetted O-ring	EPDM
Wetted spot material	Silicone
Bag port (process connection)	Eldon James weld-in port with 1" barb
Operating Conditions	
Maximum shelf life	36 months (dry storage)
Sterilization method	Gamma and X-ray irradiation 25 … 45 kGy
Temperature range during measurement	5 … 60 °C (41 … 140 °F)
Mechanical pressure resistance during measurement	Up to 2 barg / 40 °C (29 psig / 104 °F)
Material compliances	USP 87, USP 88 Class VI (pre- and post-gamma), wetted polymers: absence of animal-derived materials, BPA, DEHP and Latex
InSUS H60i	
Power Supply	24 VDC, 0.1 A
Design	
Shaft and housing material	316L stainless steel
Shaft diameter	12 mm
Total length when mounted on InSUS 507	235 mm (9.25")
Cable connection	VP8
Integrated temperature probe	Pt 1000
Signal Interfaces	
Digital	ISM and Modbus RTU
Analog	4 – 20 mA / HART or nano Ampere (nA)
Certificates and Approvals	METTLER TOLEDO Quality Certificate, CE, UKCA

Did You Know

InSUS 607 sensors are also offered by leading single-use process device manufacturers as a fully integrated component in their irradiation sterilized bioreactors.

Did You Know

METTLER TOLEDO Ingold offers pH, dissolved oxygen and dissolved CO2 sensors in single-use format for monitoring and control of processes for the production of monoclonal antibodies, mRNA vaccines, and viral vectors for cell therapies.

Powering Accessories for InPro 6860 i
Digital Sensor Integration

Combined oDO & pH Junction Box
with Bluetooth connectivity

InPro 6860 i
Adapter T82

InPro 6860 i
Adapter VP6

Features Overview

– Uses existing cables to biocontrollers
– Simplified installation
– Flexible powering options

The J-Box BTLE simplifies biocontroller upgrades to advanced InPro 6860 i optical oxygen and digital ISM pH sensors without complicated wiring or grounding requirements. Using a shared power supply, the J-Box BTLE connects both oxygen and pH sensors to biocontrollers using existing and standard T-82 (for oxygen) and AK9 (for pH) cables. Measurement signals are sent from the J-Box as nA for oxygen and mV for pH providing universal connectivity to biocontrollers. Standard 1 or 3 meter cables are available for connection from the J-Box BTLE to the oxygen and pH sensors.

The J-Box BTLE is equipped with a Bluetooth interface. It connects to ISM Core and ISM Mobile for calibration, maintenance and diagnostic purposes.

The InPro 6860 i Adapter provides functionality with a direct connection to InPro 6860 i optical oxygen sensors. 24 V DC is provided through a standard 2.1 mm 5.5 mm female barrel connection with existing T-82 cables connected to the adapter's outlet.

Flexible installation choices

The J-Box BTLE is ideal for installing ISM optical oxygen and pH sensors onto the head plate of a reactor when space is limited.

The InPro 6860 i Powered Adapter is ideal for installations with sufficient space on the head plate of a reactor and where only optical oxygen is required.

Specifications

Performance	
Minimum input power requirement	24 V DC (min. 800 mW, 0.03 A)
Power connection	2.5 mm × 5.5 mm male barrel mating to a 2.1 mm × 5.5 mm female barrel connection
Combined J-Box Sensor Connections	
To InPro 6860 i sensor	Male VarioPin
To ISM pH sensor	Male BNC
Simulated O_2 (nA) to biocontroller	Male T-82 connector* wired for temperature
Simulated pH (mV) to biocontroller	Male K9/K8S
InPro 6860 i Adapter Connections	
To InPro 6860 i sensor	Female VarioPin
To biocontroller	Male T-82 connector wired for temperature

* The T-82 Adapter is also available with a VP6 connector.

Did You Know

The J-Box BTLE is an ideal solution to retrofit biocontrollers with InPro 6860 i and ISM pH sensors. The integral 2.5 mm × 5.5 mm barrel connector enables simplified power connection. METTLER TOLEDO recommends using a three-pronged grounded 24 V DC power supply for best performance.

Additional Cable Options

METTLER TOLEDO offers a wide variety of oxygen and pH cables for connecting the J-Box BTLE or InPro 6860 i Adapter to your biocontrollers. Please contact your local representative to learn more about our available options.

InPro 6960 i / InPro 6970 i Optical Oxygen Sensor

Reliable and Intelligent

Optical technology in 12 mm design is available for challenging brewery applications such as filler line measurement. These optical sensors offer high performance together with reduced and easier maintenance. The outstanding measurement performance with low detection limit, minimum drift and short response time improves oxygen monitoring and helps to reduce out of spec production. The easy maintenance without liquid handling and polarization increases the availability of the measuring system.

ISM

ISM technology helps to make optical oxygen measurement simple and more reliable. Thanks to the Dynamic Lifetime Indicator (DLI) and Adaptive Calibration Timer (ACT), maintenance planning becomes easy and the risk of sensor failures during production time is significantly reduced. For more information see ISM introduction pages 10–11.

Specifications

Performance	
Operating range	InPro 6960 i: 0 ppb to 25 ppm InPro 6970 i: 0 ppb to 2000 ppb

InPro 6800/InPro 6850i (12 & 25 mm)

For Accurate Oxygen Measurement

InPro 6850i InPro 6800

InPro 6800

USP Class VI FDA

The InPro 6800 dissolved oxygen sensor with 12 or 25 mm diameter body provides maximum accuracy and ultimate cleanability for vessels with limited space or in containers with smaller volumes. The sensor is available with the state-of-the-art VP connector or T-82 connector in straight or angled versions. A durable 316L stainless steel construction allows for CIP, steam sterilization or autoclaving in place, and the high sensor finish virtually eliminates contamination of the process. Ingold's PTFE/silicone membranes have been designed with an internal steel mesh that makes the membrane more rugged and dramatically increases membrane life.

Specifications

Intelligent Sensor Management (ISM)

InPro 6850i sensors with integrated ISM functionality allow Plug and Measure and advanced diagnostics. ISM simplifies the installation, handling and maintenance of measurement equipment. For more information see ISM introduction pages 10–11.

Features Overview

- Revolutionary "Quick Disconnect" system allows for service in seconds
- Detection limit down to 6 ppb
- Accurate measurement and quick response
- Long lasting and easy to maintain membranes
- FDA positive listed materials of construction
- Hygienically polished surface finish of N5/R_a16 (R_a = 0.4 µm/16 µin)
- EHEDG certified for cleanability and 3A compliant
- Wetted O-rings comply with FDA and USP Class VI standards
- Autoclavable and steam sterilizable

Other Highlights

- Small 12 or 25 mm diameter saves valuable space
- Pg 13.5 threads for interface into housings
- Comes with either watertight VP connector (IP 68) or T-82 connector
- Ingold 25 mm sensor design recognized as a standard in the industry
- Cap nut allows for easy interface to Ingold ports

InPro 6800 sensor master with sensor

Angled version of InPro 6800

Replaceable anode/cathode assembly

Did You Know

The dissolved oxygen membrane used on these sensors is more durable and less prone to fouling than competitive products due to its advanced membrane design. This makes these sensors an excellent choice for dirty DO applications.

Suitable Housings for 12 mm **p.**

InPro 6900 (i)/InPro 6950 i

Accurate Trace Oxygen Measurement

InPro 6950 i InPro 6900

Angled version also available

The InPro 6900 and the InPro 6950 dissolved oxygen sensors with 12 mm diameter body offer the same advanced features as the InPro 6800, with the additional benefit of being able to measure trace oxygen concentrations. In particular, the InPro 6950 i sensor offers excellent accuracy at the lowest oxygen levels due to the built-in 4-electrode measurement system. Ingold's unique cathode design, membrane and specially formulated electrolyte generate stable and accurate results at extremely low levels of oxygen.

Features Overview

- Revolutionary "Quick Disconnect" system allows for service in seconds
- Accurate measurement at very low levels of oxygen
- Long lasting and easy to maintain membranes
- FDA positive listed materials of construction
- Hygienically polished surface finish of N5/R_a16 (R_a = 0.4 µm/16 µin)
- EHEDG certified for cleanability and 3-A compliant
- Wetted O-rings comply with FDA and USP Class VI standards
- Steam sterilizable

InTap: Portable Optical Dissolved Oxygen Analyzer

Maximum Control of Beverage Quality

ISM Bluetooth®

Dissolved oxygen level is an important quality factor in the food and beverage industry. Maintaining low oxygen levels in food and beverage production ensures flavor stability as well as long shelf life. The InTap, with an internal optical DO sensor, allows users to measure dissolved oxygen values wherever and whenever required for optimum control of production processes and product quality.
The InTap is used for the measurement of beverage DO, and at-line measurement of beer during or after filtration and prior to filling. Further, the InTap is the perfect reference measurement instrument for calibrating installed in-line oDO sensors that measure at the lowest oxygen ranges.
The InTap is equipped with a Bluetooth interface and can connect to sensors equipped with the T100 Bluetooth tool.
Reference calibration is done with a few clicks and can be transmitted wirelessly to the sensor. All data is stored in the InTap's USB-connected storage and a database of measurement points is easily built up.

Specifications

Measurement parameters	DO saturation e.g. concentration and temperature
Operating range*	0 ppb to 2000 ppb
Accuracy*	≤ ± [1 % + 2 ppb]
Response time at 25 °C (air to N_2); t 98%	< 20 s
Temperature measuring range	–5 to 60 °C (23 to 140 °F)
Operating pressure range	0 to 6 bar
Design pressure	10 bar
Protection rating	IP 67
Weight	3.5 kg
Battery	up to 24 h
Data storage	8 GB

*Sensor specifications

Features Overview

– 4.0" touchscreen
– Fast response time
– Lowest calibration requirement
– Highest accuracy down to 2 ppb
– IP 67 enclosure resists harsh environments

Other Highlights

– Full user management
– Wireless in-line sensor calibration
– Data logging up to 24 h
– Measurement point data management
– Calibration report management
– ISM predictive maintenance tools

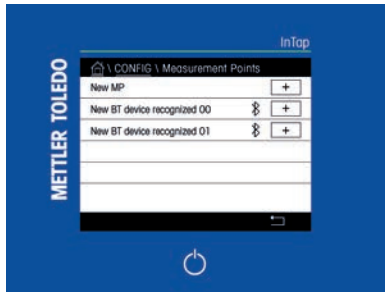
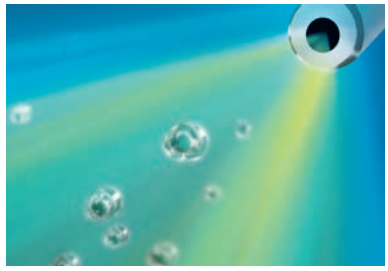
T100: Bluetooth interface for oDO sensors.



Touchscreen interface with convenient data management



Stable and accurate results with minimized calibrator demands.

Beyond optical technology METTLER TOLEDO has implemented Automatic Stability Control (ASC) to ensure stable and reliable results, also minimizing calibration demands.

With the InTap you can store the calibration data of installed sensors and build up an electronic database for sensor management. Data is stored on a USB stick and can be transferred conveniently to a PC.

Did You Know

Installed oDO sensors can be upgraded with the T100 Bluetooth tool, allowing calibration data to be sent wirelessly to the InTap.

InPro 6050

Continuous Control of Your Wastewater Application

The InPro 6050 dissolved oxygen sensor provides reliable continuous measurement of dissolved oxygen in water applications including biological treatment in wastewater. The InPro 6050 offers proven Ingold sensor technology with an integrated thermistor in a rugged plastic sensor body providing optimum measurement accuracy at an affordable price. The PTFE/silicone membrane is reinforced by an integral stainless steel mesh, which provides durability and mechanical stability to ensure reliable, continuous on-line measurement.

Specifications

Performance	
Operating range	30 ppb to saturation
Accuracy	± [1 % + 30 ppb]
Response time at 25 °C (77 °F)	98 % of final value in < 90 s
Sensor signal in air at 25 °C (77 °F)	40 to 110 nA
Residual signal in oxygen-free medium	< 0.3 % of the signal in ambient air
Construction	
Measuring principle	Amperometric Clark electrode
Cable connection	VP
Connector design	Straight
Process connection	Pg 13.5
Sensor body	PPS
Membrane material	PTFE/Silicone/PTFE (reinforced w/steel mesh)
O-ring material	Viton®, Silicone
Sensor diameter	12 mm
Shaft length	120 mm
Working Conditions	
Temperature compensation	Automatic
Measuring temperature range	0 to 60 °C (32 to 140 °F)
Design pressure	Maximum 2 bar (29 psi absolute)
Certificates and Approvals	METTLER TOLEDO Quality Certificate

Features Overview

- Rugged sensor designed for the wastewater industry
- Low maintenance
- Accurate measurement and quick response
- Long lasting and easy to maintain membranes
- Watertight VP connector (IP 68)
- PTFE coated membrane protects the membrane against particle adhesion and chemical interference

An oxygen measuring system is made up of several important components and because the measurement is so critical to the process, all of them need to operate efficiently. This section outlines the accessories and maintenance items that can be used to optimize and maintain the quality of measurement.

Membrane maintenance

Perhaps the most common problem seen over time with electrochemical oxygen sensors is membrane integrity. During the course of a membrane's life it may encounter difficult situations such as harsh samples, multiple sterilization cycles, or impact, all of which cause normal wear and tear on the membrane. Ingold pioneered the design of the PTFE and silicone membrane with a built-in steel mesh that greatly increases membrane durability, extends membrane life and can be easily and quickly replaced as required. We offer multiple membrane styles according to your application including those that have FDA positive listed components for wetted parts.

In Situ Monitoring of Dissolved CO_2 in Bioreactors
For Successful Fermentation

The importance of dissolved carbon dioxide in biotech or pharmaceutical processes

Besides pH and dissolved oxygen measurements, reliable monitoring and control of the CO_2 partial pressure is important for successful fermentation. METTLER TOLEDO Ingold's CO_2 system delivers precise, real-time data that increases understanding of critical fermentation and cell culture processes. This information will help you gain insight into cellular metabolism and other changes within the bioreactor.

A significant trend in biotechnology today is the increasing use of mammalian cell lines including human, monkey, mouse and bovine cells. Various types of bioreactors are now being used to cultivate these animal cells. One of the most important requirements for optimal cell growth in a bioreactor is continuous monitoring and control of critical parameters, which include O_2, pH, CO_2 and temperature. Reliable measurement of CO_2 is essential for successful large-scale operation as the accumulation of CO_2 becomes more problematic at high viable cell concentrations. High CO_2 concentrations can inhibit cell growth and product formation in mammalian cells and alter the glycosylation pattern of recombinant proteins. By maintaining low and constant levels of CO_2, the production rate of pharmaceuticals, proteins and antibodies can be significantly increased.

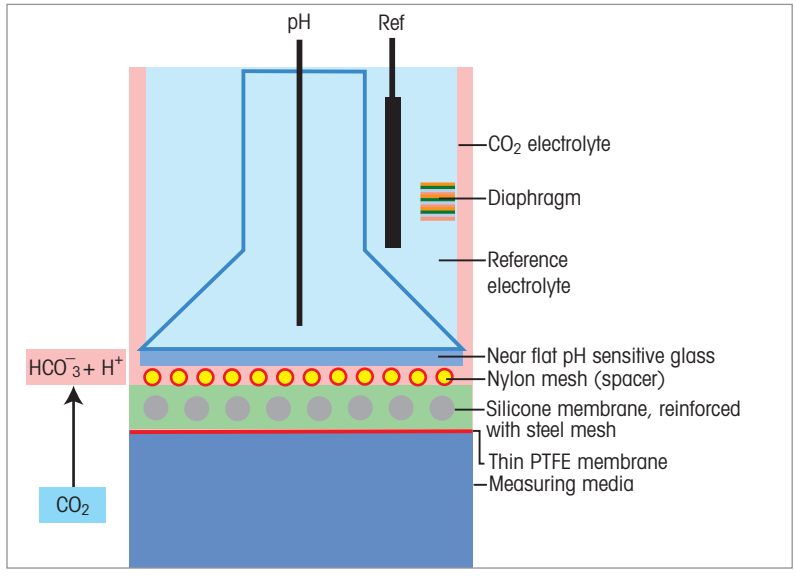
Dissolved carbon dioxide sensors

The InPro 5000i dissolved CO_2 sensor utilizes the Severinghaus principle of CO_2 measurement which was developed in 1958 for use in blood-gas analysis. The sensing electrode in this principle is an enhanced pH electrode separated from the measurement media by an electrolyte-filled gas permeable membrane. CO_2 diffuses through the membrane and into the inner electrolyte where it equilibrates with bicarbonate ions, altering the pH value. The relative change in pH value of the electrolyte is then measured by the enhanced pH electrode and correlated to CO_2.

The InPro 5000i series sensor has been optimized for in situ analysis of dissolved CO_2 in fermentation and cell culture processes. This sensor has a high surface finish for ultimate cleanability and can be steam sterilized or autoclaved. The modular membrane allows for maintenance in seconds and its unique construction stops interference of volatile acids which are often found in bioprocesses.

A perfect team: M400 transmitter with InPro 5000i CO_2 sensor

Measuring principle of the InPro 5000i sensor



In-line CO_2 Measurement in Beverages
Proven Technology, Simplified Operation

In-line CO_2 measurements in brewery and carbonated soft drinks processes are commonly used to ensure consistent beverage quality. However, initial investment, installation costs, and expenditure caused by unscheduled system downtime can amount to an unfavorable total lifetime cost of measurement equipment. A sensor that offers simplified handling and enhanced diagnostics leads to more reliable and cost effective operation.

Importance of CO_2 measurements

For consumers, the mouthfeel (and foam in the case of beer) is as important as a beverage's taste. Monitoring and controlling dissolved CO_2 concentrations helps ensure consumers experience the sight and effervescence of your products the way you want them to. Consequently, typical applications for in-line CO_2 measurement systems in beverage producing processes are:

– Beverage carbonation control
– Measurements in filling lines
– Monitoring of possible CO_2 losses in critical process steps
– Deaerated water carbonation control

As much as reproducible CO_2 concentrations are responsible for consistent product quality, different packaging solutions also require different CO_2 levels for beverage dispensing and process safety reasons, e.g. to avoid mechanical damage to cans in tunnel pasteurizers due to high CO_2 levels. Table 1 shows typical concentration ranges for different beverages and packages.

Thermal conductivity plus Intelligent Sensor Management

The InPro 5500i combines enhanced TC measurement with the proprietary Intelligent Sensor Management (ISM) concept. ISM simplifies sensor handling, enhances reliability and reduces sensor lifecycle costs. Plug and Measure installation and predictive maintenance tools, such as an indicator for falling membrane integrity, increases measurement point uptime and improve process safety.

Together with the M400 ISM transmitter operators can take full advantage of features that non-ISM systems cannot match.

Product	Typical CO_2 Concentration
Deaerated water used in blending processes	2 g/L (1 Vol) up to concentration of packaged beverage
Beers filled in cans/kegs	Up to 5.2 g/L (2.6 Vol)
Bottom fermented beers in bottles	5 to 6 g/L (2.5 to 3.0 Vol)
Top fermented beers in bottles	6 to 9 g/L (3 to 4.5 Vol)
Carbonated soft drinks	5 to 10 g/L (2.5 to 5 Vol)

Table 1: Typical CO_2 ranges in carbonated beverages

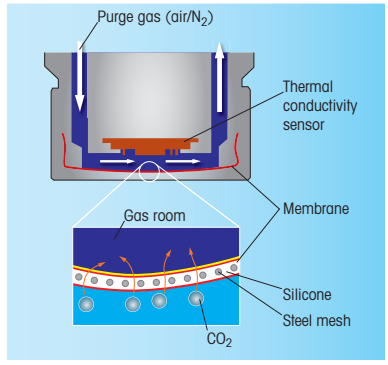


Fig 1: TC sensor design – complete avoidance of moving parts

Fig 2: METTLER TOLEDO's InPro 5500i in-line dissolved CO_2 sensor employs thermal conductivity measurement

InPro 5000 i
For Accurate CO_2 Measurement

USP Class VI

FDA

CERTIFIED EHEDG TYPE EL CLASS I

ISM

The InPro 5000 i dissolved carbon dioxide sensor allows for the accurate measurement and control of dissolved CO_2 in biopharmaceutical applications. The measuring principle is based on the Severinghaus principle of potentiometric CO_2 measurement which has been widely accepted for over 55 years. The high surface finish of the stainless steel sensor prevents contamination and the sensor is fully sterilizable either in-situ or in an autoclave. The design of the membrane dramatically reduces full service time to just minutes. The interior body, a high performance pH electrode, can easily be replaced at your site. No need to send the sensor in for service. Also available with Intelligent Sensor Management (ISM) for Plug and Measure and advanced diagnostics (see pages 10-11).

Specifications

Performance	
Measuring range	10 to 1000 mbar pCO_2

InSUS 507/InSUS H50i – Single-use Sensor

Flexible Integration and Operation

ISM
CE
UK CA
USP Class VI

The measurement principle of the InSUS 507 single-use dissolved CO_2 sensor is based on the widely accepted Severinghaus principle and offers identical reliability and accuracy as METTLER TOLEDO's reusable dissolved CO_2 sensors. The single-use sensors are gamma and X-ray sterilizable for secure installation and operation in single-use process devices such as bioreactors for biopharmaceutical manufacturing.

An InSUS 507 sensor is operated together with a reusable sensor head, InSUS H50i. This pairing offers the same connectivity and signal integration options as the reusable InPro 5000i dissolved CO_2 sensor (page x-y). The identical operational interface leads to convenient and flexible use of InSUS and InPro sensors in single-use devices, without modifying the installed process transmitter or controller environment.

Features Overview

- Installation in standard weld-in bag ports
- Gamma and X-ray irradiation sterilizable
- Three-year shelf life
- Wetted parts in accordance with USP Class VI standards
- Gel electrolyte capsule
- No need for autoclaving
- Plug and Measure
- Industry proven measurement principle

Specifications

InSUS 507	
Measurement principle	Potentiometric Severinghaus
Measuring range	10 to 1000 mbar (0.145 to 15.4 psi) pCO_2
Accuracy	±10 % (pCO_2 10 to 900 mbar) ±15 % (pCO_2 > 900 mbar)

Did You Know

InSUS 507 sensors are also offered by leading single-use process device manufacturers as a fully integrated component in their irradiation sterilized bioreactors.

Other Highlights

– A gel capsule leads to fast, clean and user-friendly filling of electrolyte in the inner membrane chamber of the InSUS 507, even for horizontally installed sensors in single-use bioreactors

Did You Know

METTLER TOLEDO Ingold offers pH, dissolved oxygen and dissolved CO_2 sensors in single-use format for monitoring and control of processes for the production of monoclonal antibodies, mRNA vaccines, and viral vectors for cell therapies.

InPro 5500 i
Less Maintenance, Greater Reliability

The InPro 5500 i thermal conductivity CO_2 sensor provides reliable in-line measurement of dissolved carbon dioxide for a wide spectrum of food and beverage (brewery and carbonated soft drinks) processes. Intelligent Sensor Management (ISM) technology simplifies sensor handling and reduces sensor lifecycle cost. The InPro 5500 i thermal conductivity CO_2 sensor offers outstanding features, e.g., direct process connections, and integrated temperature sensor. Its hygienic design is capable of withstanding CIP procedures. Furthermore, the sensor is equipped with ISM technology which provides unique features such as Plug and Measure, automatic sensor protection, and predictive maintenance functions (see pages 10–11).

Specifications

Design pressure	= permissible pressure range
Permissible temperature range*	0 to 50 °C (32 to 122 °F)
Operating temperature range	–5 to 121 °C (23 to 250 °F)
Sterilization temperature	up to 120 °C (248 °F)
Certificates and Approvals	MaxCert certification package (Material Certificate 3.1, Surface Finish Certificate 2.1, Final Inspection Certificate)

Features Overview

- Direct process connections with three choices (Varivent™, Tri-Clamp™, 28 mm/M42)
- Integrated temperature sensor
- Hygienic design, capable of withstanding CIP procedures
- O-rings with FDA approval
- Stainless steel surface with highly polished finish
- Steam sterilizable up to 120 °C (248 °F)
- Minimal and easiest membrane maintenance

Other Highlights

- Wide CO_2 detection range – 0 to 15 g/L CO_2
- Improved thermal conductivity technique for greater accuracy and low drift
- Immunity to background gases results in high CO_2 selectivity
- Predictive maintenance tools such as Dynamic Lifetime Indicator (detects when membrane replacement will be required) and Adaptive Calibration Timer (predicts when calibration should be performed)

Did You Know

The InPro 5500 i can be combined with an M400 for a single loop or with an O_2 sensor using the M800 multi-channel transmitter for a complete dual O_2/CO_2 loop.

Process connection compatibility

Varivent, Tri-Clamp and 28 mm/M 42 process connections, plus the integrated temperature sensor for more accurate CO_2 measurement, means commissioning is quick and straightforward. The hygienic membrane cap has been designed for ease of cleanability and simple, quick exchange.

Versatile Turbidity Measurement
For Multiple Industries and Applications

Turbidity measurements are important indicators in many processes as they not only influence the yield of your process but also detect factors which are detrimental to a system.

Backscattered light technology
With a single optical fiber turbidity sensor, the emitted and backscattered light travels on the same fiber. Linear measurement for medium to high levels of turbidity is possible. With a system of two optical fibers the emitted and backscattered light travels on two fibers. Sensitivity to detect particles is consequently higher.

Forward scattered light technology
This technology provides an optimum measuring range for low to medium turbidity levels. They are ideal for detection of larger particles > 0.3 µm and with the simultaneous measurement of forward and direct light allows for compensation of color.

Turbidity and color monitoring
The sophisticated digital measuring technology in the InPro 86X0i e sensor is based on the photometric determination of blue and red light. Whereas the blue light is used to detect the color of the medium, in particular the color of beer, the scattering of red light is used to simultaneously detect the turbidity of the medium.

New optical product monitor
Precise monitoring of phase separation in food and beverage production is easily achieved by applying our InPro 8300 RAMS optical product monitor. Up to eight signals from long-life LEDs allow automated in-line product characterization by turbidity and color, as well as identifying products by their optical "fingerprint".

Turbidity sensor selection
METTLER TOLEDO Ingold offers several types of turbidity sensors that are optimized for specific measurement ranges and different applications. Depending on the applied technology and design they can be used in many industries such as:

- Biotechnology
- Pharmaceutical
- Chemical Processing
- Petrochemical
- Food and Beverage
- Breweries

Sensor versatility matches the requirements of diverse applications in which they can be implemented:

- Fermentation
- Biomass growth (cell density)
- Crystallization
- Phase separation
- Water in oil
- Filter breakthrough
- Activated sludge
- Post filtration of beer
- Wastewater

Our versatile turbidity measurement systems can be implemented in practically any process.

Transmitter selection
For use with the InPro 86X0i e series, the traffic light color-coded touchscreen on the M800 Process transmitter allows operators to evaluate the sensor and process condition at a glance. The M800 transmitter also provides excellent security (setting can be password protected) and convenient operation.

Color measurement
Two precision instruments for turbidity and color in-line measurement are combined into one unique sensor. Our food and beverage industry proven InPro 86X0i e incorporates a two-angle turbidity instrument with an EBC color monitor. Providing two sensors in one maintenance-free instrument means cost of ownership is at a minimum while reliability and easy handling are maximized.

Turbidity housing selection
Housing options are available for simple interface into a process. These housings help maintain low maintenance and minimum downtime of your process by allowing easy removal of the turbidity sensor. The housings are designed for strict Clean in Place (CIP) applications and harsh environments.

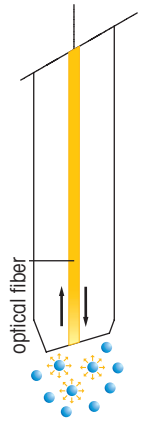
Our range of turbidity sensors

InPro 8050/InPro 8100 (Single Fiber)

Wide Measurement Range

InPro 8100

InPro 8050



Single optical fiber: emitted and back-scattered light travel on same fiber.

The InPro 8100 and 8050 single optical fiber turbidity sensors are designed for samples that have high particle concentrations and they offer a wide linear measuring range. The InPro 8100 is available in stainless steel and is intended for use in cell culture monitoring, pharmaceutical production, and industrial processes. The InPro 8050 utilizes a rugged polysulfone body and was developed specifically for accuracy and durability in the industrial wastewater environment.

Specifications

InPro 8050	
Technology	1 – fiber
Measuring range	10 to 4000 FTU 0 to 250 g/L (diatomaceous earth as reference)
Shaft material	PSU (Polysulfone)
Shaft lengths	120 mm
Sensor diameter	12 mm
Fiber optic cable	6 m (19.7 ft), fixed
Sterilizable	No
Autoclavable	No
Explosion protection	No
InPro 8100	
Technology	1 – fiber
Measuring range	10 to 4000 FTU 0 to 250 g/L (diatomaceous earth as reference)
Shaft material	Stainless steel (316 L)
Shaft lengths	120, 205, 297 or 407 mm
Sensor diameter	12 mm
Surface finish	N5 (R_a = 0.4 µm/16 µin)
Fiber optic cable	3 m (9.8 ft), fixed
Sterilizable	Yes, steam sterilizable at 130 °C (266 °F)
Autoclavable	Yes, for autoclavable version see ordering information next page
Certificates and Approvals	ATEX, CE and Material certificate according to 3.1

Features Overview

- Backscattered light technology
- Uniform sensor structure reduces fouling and maintenance
- Wide measuring range
- Broad range of applications
- High accuracy

Other Highlights

- Small 12 mm diameter saves valuable space
- Pg 13.5 threads for interface into housings
- Integrated fiber optic cable
- Variety of sensor lengths available

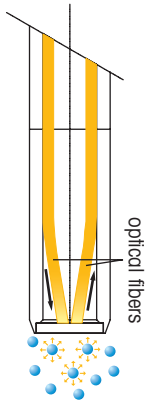
InPro 8200 (Dual Fiber)

High Resolution at Medium Turbidity

Two optical fibers: for emitted and backscattered light protected by scratch resistant sapphire window.



The InPro 8200 dual optical fiber turbidity sensor is designed for samples with medium to high concentration and where high resolution is a requirement. The InPro 8200 is available in stainless steel or Hastelloy™ and is intended for use in cell culture monitoring, crystallization control, and industrial processes including liquid/solid separation.

Did You Know

The CaliCap™ calibration accessory can serve two important functions. Firstly, it can be used as a "dry check" to verify the performance of the Transmitter/Sensor combination. Secondly, it provides stable measurement during off-line calibration in small vessels where reflection can disturb the measurement.

Suitable Housings **p.**

InPro 8610ie/InPro 8630ie Turbidity Sensor

Reliable Measurement for Tight Process Control

The innovative InPro 8610ie and InPro 8630ie turbidity sensors combine precision technology with advanced measurement electronics in one compact sensor head, and provide highly reliable measurements at a reduced installation cost. The forward and 25° sideward scattered light measurement technology in the InPro 8610ie and InPro 8630ie are designed to provide dependable turbidity measurements in the low to medium particle concentration range. Additionally, the InPro 8630ie sensor includes 90° scattered light measurement and a blue LED light source. The 90° scattered light is very sensitive to measuring turbidity in liquids with small undissolved particles such as beer proteins and glucanes. While the blue LED enables color measurement, which is especially useful in beer and sugar processing applications.

Features Overview

- Real-time window fouling surveillance
- Plug and Measure startup
- ISM provides real-time information on sensor condition
- Automatic color or turbidity compensation

Other Highlights

- Compliance with international standards
- Hygienic design
- 12-point turbidity and 6-point color factory pre-calibration over the entire measuring range

Specifications

Measuring principle	Turbidity: Scattered light (25°/90°**) Color**: Absorption measurement
Light source	Turbidity: 650nm, LED Color: 430nm, LED
Measuring range	0 to 1000 EBC 0 to 4000 FTU 0 to 50 EBC Color

InPro 8300 RAMS Series

Optical Product Monitoring and Identification Systems

The InPro 8300 RAMS is an optical multi-switch for monitoring product/water phase separation processes and for the identification of products in the process. In process automation applications, the unit supplies the switching signal for product/water or product/product phase separation. Where a range of products is manufactured, it allows unique identification of the different products.
Using up to four different wavelengths, the transmitted light and the back-scattered light are measured. This method allows virtually all liquids to be monitored, independently of their color and turbidity.

Specifications

Main Module		
Measuring cycle (all 8 parameters)		approx. 5 measurements per second
Reaction time		≤ 1 s
Measuring range	TCS	0...100 % Absorption turbidity or color system
	BASIC	0...100 % Absorption and/or reflection at four wavelengths for product identification
	CAL/COMBINE	Turbidity 0...50/100/200/500/1000 EBC (factory calibrated) Color 0...15/30/60/150 EBC (factory calibrated)
Repeatability		± 1 % of measuring range
Power supply		24 VDC ± 5 %
Power consumption		< 50 mA plus total of output currents, polarity reversal protection up to 30 V
Output signal		4...20 mA Calibrated Range or 0...100 % Abs./refl.
Configuration interface		RS 232
Operating conditions		
Ambient temperature		0 to 40 °C (32 to 104 °F)
Product temperature		0 to 105 °C (32 to 221 °F) (140 °C/284 °F optional)
Rel. humidity		0 to 100 %
Protection class		IP 67
Materials		
Housing		1.4404
Seals		EPDM/optional Viton®
Viewing window		PVC
Cable glands		brass/nickel plated
OPL-Bits		
Housing material		1.4404
Sealing material		EPDM, optional Viton®
Window material		Borosilicate, sapphire (optional)
Operating pressure		max. 10 bar
Mechanical temp. resistance		– 5 to + 180 °C (23 to 356 °F) (depending on the sealing material)

Features Overview

- Monitoring of turbidity and color using one single unit
- Use of durable and long-lasting LEDs
- Excellent zero stability
- Configuration using a PC or notebook
- Easy to retrofit to VARINLINE access units or VARINLINE sight glasses without the need of welding
- In parallel to processing the switching outputs and the analog output in the PLC, visualization via a separate PC is possible

Conductivity/Resistivity Systems
When Optimal Performance Is Essential

Electrolytic conductivity is a widely used analytical parameter for water purity analysis, monitoring of reverse osmosis, cleaning procedures, control of chemical processes, and in industrial wastewater.

Three commonly used techniques
Electrolytic conductivity is a measure of the total ionic content of a solution. There are three main methodologies to measure conductivity:
- 2-electrode sensors are for measurements in high purity water and relatively low conductivity ranges
- 4-electrode sensors are for mid to high ranges. They are more resistant to fouling than 2-electrode designs
- Inductive sensors cover mid to very high conductivity ranges, and are particularly resistant to fouling.

METTLER TOLEDO offers all three methodologies.

2-electrode sensor design
An AC voltage is applied across the two electrodes, and the resistance between them is measured. The built-in temperature sensor provides fast accurate measurement. The cell geometry and the high solution resistance allow for very accurate and precise conductivity determination.
Sensors are used for: water conditioning and purification stages where they are capable of detecting minute levels of impurities in ultrapure water.

4-electrode sensor design
An AC voltage is applied across the two outside electrodes. The principle is to measure the voltage drop across the two inner electrodes. This eliminates polarization errors. Since this technique measures potential drop the measurement remains accurate.
It permits easier in-line cleaning and it can be installed in smaller piping than inductive sensors.
Sensors are used for: concentration measurement of acids, alkalis, and salt process streams.

Inductive sensor design
The inductive or "electrodeless" conductivity sensor consists of two toroidal coils encapsulated in an inert polymer body. When placed in a conductive solution, a current loop is generated proportional to the conductivity of the solution.
They are ideal for very high conductivity measurements as found in chemical processes, and aggressive applications where contacting electrodes may not be suitable.

Continuous conductivity monitoring according to USP <645>
USP guideline <645> sets a standard for the quality assessment of USP waters based on measurement of the electrolytic conductivity. There is a 3-stage test in which stage 1 allows on-line, non-temperature compensated conductivity measurement. There are specific requirements for the sensors and transmitters (see table).

Specification	USP <645>
Conductivity sensor and cell constant accuracy	Verify cell constant within ±2 % using a reference solution
Conductivity meter calibration	NIST traceable 0.1 % precision resistors in place of sensor
Instrument resolution	0.1 µS/cm
Instrument accuracy at 1.3 µS/cm	0.1 µS/cm
Temperature compensation	Must be read uncompensated
Instrument dynamic range	10^2

METTLER TOLEDO instruments meet USP <645> water conductivity requirements.

InPro 7100 (i)

Convenient Sensors for All Your Processes

InPro 7100 InPro 7100 i

The InPro 7100 is particularly suited for applications in the Chemical Industry, Pharmaceutical Industry, Food & Beverage and Pulp & Paper. The fast response time allows quick detection of process changes, leading to better process control. The PEEK shaft material offers high resistivity against aggressive solutions and is particularly suitable in process with frequent CIP/SIP cycles. The InPro 7100 is compatible with a variety of static (InDip® or InFit® series) and retractable (InTrac® series) housings giving the user a wide choice of installation options.

Specifications

Performance	
Cell constant nominal	0.31 cm^{-1}

Construction	
Measuring principle	4-electrode sensor
Electrode material	SS 316L/1.4435 Hastelloy C22
Body material	PEEK
RTD	Built-in Pt 1000
Sensor diameter	12 mm
Sensor length	120 mm (4.72"), 225 mm (8.85"), 425 mm (16.73")
Process connection	Pg 13.5, (with InFit series: Tri-Clamp 1.5", Tri-Clamp 2", Cap nut DN 25
Design	
Temperature compensation	Pt 1000 IEC class A
Cable connection	InPro 7100: Vario Pin (IP 68); InPro 7100 i: AK9
Wetted parts:	– Metals: SS 316L/1.4435 or Hastelloy C22 – Plastics: PEEK (FDA; USP Class VI)
Certificates and Approvals	Cell constant, ATEX, Material certificate 2.1 and 3.1, CE

Features Overview

– Wide measurement range (0.02 – 500 mS/cm, depending on the transmitter)
– High resistance against aggressive chemicals
– Compatible with a variety of our static and retractable housing
– WideRange technology

ISM Features

– Digital connector
– Plug and Measure functionality

Typical Applications

– Chemical concentration control
– Control of CIP processes
– Control of digesting and bleaching (Pulp & Paper)
– Detection of phase separation (Food & Beverages)
– Buffer preparation (Pharma)

InPro 7250
Inductive Conductivity Sensors

PEEK PFA

The InPro 7250 Series conductivity sensors are inductive sensors designed to handle aggressive chemical solutions or dirty water applications. These "electrodeless" sensors have no electrodes in contact with the sample and are not affected by coatings that foul traditional contacting conductivity sensors. Able to measure medium to very high conductivity levels, applications range from measurement of industrial wastewater to acid, caustic, and salt stream concentration in industrial processing.

Specifications

High Temperature (HT)	**PEEK**	**PFA**
Measurement range	0–2,000 mS/cm	0–2,000 mS/cm
Temperature range	–20 to 180 °C (–4 to 356 °F)	–20 °C to 125 °C (–4 to 257 °F)
Pressure range at 25 °C (77 °F)	0–20 bar (0–290 psi)	0–16 bar (0–232 psi)
Sensor material	PEEK, glass filled	PFA, not glass filled
Seal material	Viton®	PTFE

Measurement range	0–2,000 mS/cm
Temperature range	–20 to 100 °C (–4 to 212 °F)
Pressure range at 25 °C (77 °F)	0–8 bar (0–116 psi)
Sensor material	PEEK, glass filled
Seal material	Viton®
Temperature sensor	Pt 1000
Cell factor	2.175
Process connection	G ¾"
Cable length	3 m, 5 m, 10 m (9.8 ft, 16.4 ft, 32.8 ft)
Certificates and Approvals CE:	•

Features Overview

- Inductive design ideal for dirty applications or process chemical concentration measurement
- No polarization effects
- High temperature model suitable for boiler blowdown applications
- Chemically resistant PEEK body for very aggressive chemicals
- PFA version available for harsh environments
- Robust design for maintenance-free operation
- Available bushings and flanges simplify installation

Transmitters for All Parameters

Your Access to the Process

Constant information
Transmitters are the components that communicate to the user and translate sensor readings into displayed measurements. METTLER TOLEDO provides tailorable transmitter solutions to meet the needs of a wide range of applications and functional requirements. Intelligent diagnostics keep users informed of sensor "health".

Single- or multi-channel?
For simpler processes where only a single parameter requires measurement, a single-channel transmitter is the obvious choice, but for processes where more than one parameter must be monitored, multi-channel, multi-parameter transmitters offer significant advantages. METTLER TOLEDO multi-channel transmitters combine operating flexibility with ease of use.

Transmitters for hazardous areas
Many of our transmitters have been designed specifically for hazardous area use where there is a risk of explo-

sive or toxic environments. Low-power, 2-wire units with ATEX/FM approvals ensure operating safety.

Digital communication
We offer transmitters for all common digital communication protocols for easy interface with your DCS or PLC. Intelligent Sensor Management (ISM) diagnostics data can also be accessed on control systems to provide an overview of the performance of all measurement systems from one point.

The way forward
Use of digital sensors is becoming increasingly common in the process industries. Many of our transmitters accept traditional analog as well as ISM digital sensors, providing a future oriented investment in your plant. Our latest transmitter developments include the M400 and M300 Process multi-parameter units. Their touchscreen display and intuitive menus save operating time, while predictive maintenance ensures reliability and reduced maintenance. The M100 series has been designed to provide the ultimate solution for measurement point simplicity. This displayless transmitter sets a new standard in measuring system simplicity and efficiency.

M200: Convenient and Reliable
For Basic Process Applications

CE c UL US LISTED

ISM

The M200 multi-parameter transmitter line covers pH, ORP, dissolved oxygen, ozone and conductivity measurements. Plug and Measure provides compatibility and reliable operation for ISM sensors as well as the complete digital easySense™ line. Convenient operation thanks to the large display, plain text interface, quick access menu and easily accessible wiring terminals. With the Transmitter Configuration Tool (TCT) provided for the M200 commissioning as well as maintenance becomes substantially easier.

Specifications

Measurement parameters	pH, ORP, dissolved oxygen, conductivity and ozone
ISM	Plug and Measure
Power supply	100 V to 240 VAC or 20 to 30 VDC, 10 VA
AC Frequency	50 to 60 Hz
Current (analog) outputs	2 × or 4 × 0/4 – 20 mA, 22 mA alarm, galvanically isolated from input and from earth/ground
User interface	Backlit LCD, 4 lines
Languages	8 (English, German, French, Italian, Spanish, Portuguese, Russian and Japanese)
Ambient temperature	–10 to 50 °C (14 to 122 °F)
Relative humidity	0 to 95 % non-condensing
Rating	IP65
Hold input	yes
Control input	2 (1 for single channel)
Relays	2-SPDT (alarm delay 0 to 999 s)

Features Overview

– Plug and Measure for easy operation and maintenance
– Input for digital ISM sensor signals and easySense sensors
– Multi-parameter unit
– 1 or 2-channel version
– 2 configurable relays
– IP65 rated
– 8 languages: English, German, French, Italian, Spanish, Portuguese, Russian and Japanese

Other Highlights

– 4-wire installation
– Quick setup mode for fast commissioning
– Free Transmitter Configuration Tool (TCT) software

Parameter Specifications

pH/ORP	
Measurement parameters	pH, mV and temperature
pH range	–2.00 to 16.00 pH
ORP input range	–1500 to 1500 mV
pH resolution	Auto/0.01/0.1/1 (can be selected)
pH accuracy	±1 digit
Temperature measuring range	–30 to 130 °C (–22 to 266 °F)
Temperature resolution	Auto/0.001/0.01/0.1/1 °C/°F (can be selected)
Temperature accuracy	±1 digit
Calibration	1-point (offset), 2-point, process
Sensor maximum distance	80 m (260 ft)

Dissolved oxygen	
Measurement parameters	Dissolved oxygen (DO) saturation or concentration and temperature
DO concentration range	0.00 to 50.00 ppm (mg/L)
DO saturation range	0 to 500 %, air, 0 to 0 to 200 % O_2
DO resolution	Auto/0.001/0.01/0.1/1 (can be selected)
DO accuracy	±1 digit
Temperature measuring range	–10 to +80 °C (14 to 176 °F)
Temperature resolution	Auto/0.001/0.01/0.1/1 °C/°F (can be selected)
Temperature accuracy	±1 digit
Calibration	1-point (slope or offset), process (slope or offset)
Sensor maximum distance	80 m (260 ft)

Conductivity	
Measurement parameters	Conductivity and temperature
Cond range 2-electrode sensor	0.1 to 40000 mS/cm (25 Ω × cm to 100 MΩ × cm)
Cond range 4-electrode sensor	0.01 to 650 mS/cm (1.54 Ω × cm to 0.1 MΩ × cm)
Cond / Res resolution	Auto/0.001/0.01/0.1/1 (can be selected)
Cond / Res accuracy	± 1 digit
Temperature measuring range	–40 to 200 °C (–40 to 392 °F)
Temperature resolution	Auto/0.001/0.01/0.1/1 °C/°F (can be selected)
Temperature accuracy	±1 digit
Chemical concentration curves	NaCl 0–26 % @ 0 °C to 0–28 % @ +100 °C NaOH 0–12 % @ 0 °C to 0–16 % @ +40 °C to 0–6 % @ +100 °C HCl 0–18 % @–20 °C to 0–18 % @ 0 °C to 0–5 % @ +50 °C HNO_3 0–30 % @–20 °C to 0–30 % @ 0 °C to 0–8 % @ +50 °C H_2SO_4 0–26 % @–12 °C to 0–26 % @ +5 °C to 0–9 % @ +100 °C H_3PO_4 0–35 % @ +5 °C to 80 °C TDS ranges NaCl, $CaCO_3$
Calibration	1-point (slope), 2-point, process
Sensor maximum distance, DS 4-e	80 m (260 ft)
Sensor maximum distance ISM 2-e	90 m (300 ft)

M300 Process: Versatile and User-Friendly

For a Wide Range of Applications and Industries

CE c UL US LISTED

ISM

The multi-parameter M300 Process transmitter line for pH/ORP, dissolved oxygen, dissolved ozone and conductivity measurements offers exceptional measurement performance as well as excellent user ergonomics.
The high contrast black and white touchscreen together with the harmonized menu structure for all parameters, facilitates navigation and ensures easy and user friendly operation.
On-line diagnostics information allows you to schedule sensor maintenance or replacement. The clearly visible diagnostic information lets you know when it's time to do maintenance or calibration of sensors equipped with Intelligent Sensor Management (ISM) technology.
The integrated USB interface allows you to use it for data logging or to store the configuration on a USB stick.

Features Overview

- 4.0" touchscreen
- Multi-parameter transmitter for pH/ORP, DO, ozone and cond
- Available as single-channel or dual-channel version
- PID controller with pulse length, pulse frequency or analog control
- User management available

Other Highlights

- Mixed-mode functionality allows the connection of analog or digital ISM sensors
- Full ISM diagnostics available
- 4-wire installation
- Also communicates with EasyClean systems for automatic sensor cleaning

www.mt.com/M300

Specifications

Power supply	100 to 240 VAC, or 20 to 30 VDC, 10 VA
Frequency for AC	50 to 60 Hz
Current output	2 × 0/4 to 20 mA (4× for dual channel), 22 mA alarm (according to Namur NE43)
Display	4.0" b/w touchscreen, 320 × 240 pixel
Languages	10 (English, German, French, Italian, Spanish, Portuguese, Russian, Japanese, Korean and Chinese)
Ambient temperature	–10 to 50 °C (14 to 122 °F)
Relative humidity	0 to 95% non-condensing
Rating	¼ DIN: IP65 (front) ½ DIN: IP65
PID controller	Yes
Control input (Hold)	1 or 2 (dual channel version)
Relays	2× SPST, 2× reed
Approvals and certificates	cULus
USB interface	1× USB Host: Data logging and configuration storage on USB stick 1× USB Device: Software update interface

Parameter Specifications

pH Performance	
Measurement parameters	pH, mV, and temperature
pH, ORP input range*	–1500 to 1500 mV
pH display range	–2 to 16 pH
pH resolution	Auto/0.01/0.1/1 (can be selected)
Relative accuracy**	±0.02 pH; ±1 mV
Temperature input*	Pt1000 (Pt100 with adapter)
Temperature measuring range	–30 to 130 °C (–22 to 266 °F)
Temperature accuracy**	±0.25 °C (±0.45 °F)
Sensor maximum distance	Analog: 10 to 20 m (33 to 65 ft) ISM: 80 m (260 ft)
Calibration	1- or 2-point, process

* not required for ISM sensors
** for analog input signal (ISM signal causes no additional error)

Parameter Specifications (cont.)

DO Performance	
Measurement parameters	DO saturation or concentration and temperature
Measuring current range	0 to 900 nA
DO concentration range	0.00 to 50.00 ppm (mg/L)
DO accuracy	±0.5 % of full scale reading
DO resolution	Auto/0.001/0.01/0.1/1 (can be selected)
Temperature input*	NTC 22
Temperature measuring range	–10 to 80 °C (14 to 176 °F)
Temperature accuracy**	±0.25 °C (±0.45 °F)
Sensor maximum distance	Analog: 20 m (65 ft). ISM: 80 m (260 ft)
Calibration	1-point (slope or offset), process (slope or offset)

* not required for ISM sensors ** for analog input signal (ISM signal causes no additional error)

Conductivity Performance	
Measurement parameters	Conductivity, and temperature
Conductivity/resistivity ranges	2-electrode sensor display range: 0 to 40,000 mS/cm (25 Ω × cm to 100 MΩ × cm) 4-electrode sensor display range: 0.01 to 650 mS/cm (1.54 Ω × cm to 0.1 MΩ × cm)
Temperature input*	Pt 1000
Temperature measuring range	–40 to 200 °C (–40 to 392 °F)
Sensor maximum distance	Analog 2-e: 61 m (200 ft); analog 4-e: 15 m (50 ft) ISM 2-e: 90 m (300 ft); ISM 4-e: 80 m (260 ft)
Cond/Res accuracy**	±0.5 % of reading or 0.25 Ω, whichever is greater
Cond/Res repeatability	±0.25 % of reading or 0.25 Ω, whichever is greater
Cond/Res resolution	Auto/0.001/0.01/0.1/1 (can be selected)
Temperature resolution	Auto/0.001/0.01/0.1/1 °C (°F) (can be selected)
Temperature accuracy**	±0.25 °C (±0.45 °F)
Temperature repeatability**	±0.13 °C (±0.23 °F)

* not required for ISM sensors ** for analog input signal (ISM signal causes no additional error)

Dissolved Ozone Performance	
Measurement parameters	Concentration and temperature
Display range for current	Analog: 0 to –7000 nA
Ozone measuring range	Short term: 0 to 5.00 ppm (mg/L) O_3 Continuous: 0 to 500 ppb (µg/L) O_3
Ozone accuracy*	Analog: ±0.5 % of reading or ±5 ppb
Resolution	±1 digit
Temperature compensation	Automatic
Temperature measuring range	0 to 50 °C (32 to 122 °F)
Temperature resolution	Auto/0.001/0.01/0.1/1 (can be selected)
Temperature accuracy*	Analog: ±0.25 °C (±0.45 °F)
Sensor maximum distance	80 m (260 ft)
Calibration	1-point (offset) or process (slope and offset)

* for analog input signal (ISM input signal causes no additional error)

M400: Reliable and Intelligent
Advanced Process Control

The multi-parameter M400 transmitter series features Intelligent Sensor Management (ISM) technology and covers pH/ORP, oxygen (for measurement of dissolved oxygen or in gas), dissolved carbon dioxide, dissolved ozone, conductivity or GPro 500 TDL, depending on the type you choose.
The high-contrast black and white touchscreen together with four soft keys, allows you to operate the transmitter even in the harshest applications without compromising user ergonomics. The online diagnostic information with harmonized menu display lets you know when it is time to do maintenance or calibration of sensors equipped with ISM technology. The HART or Foundation Fieldbus communication protocol provides easy integration of sensor diagnostics into process control systems.

Specifications

General		
Power supply	100 to 240 VAC, or 20 to 30 VDC, 10 VA	
Frequency for AC	50 to 60 Hz	
Current output	4 × 0/4 to 2 mA, 22 mA alarm (according to Namur NE43) (except M400 FF 4-wire)	
Display	4.0" TFT b/w touchscreen, 320 × 240 pixels	
Languages	10 (English, German, French, Italian, Spanish, Portuguese, Russian, Japanese, Korean and Chinese)	
Ambient temperature	–20 to +50 °C (–4 to 122 °F)	
Relative humidity	0 to 95 % non-condensing	
Rating	IP66 NEMA 4X	
Approvals	Type 1, 2, 3:	cCSAus Class I Division 2. ATEX IECEx Zone 2, FM cFMus Class I Division 2, cULus NEPSI Zone 2
	Foundation Fieldbus: cULus	
PID process controller	Yes	
Control input (Hold)	2	
USB interface	1 × USB Host: Data logging and configuration storage on USB stick 1 × USB Device: Software update interface	

Features Overview
- 4" touchscreen plus soft-key operation
- Advanced ISM diagnostics, incl. iMonitor
- Communication protocol: 4 to 20 mA (with HART)
- Multi-parameter measurement
- Aluminum die cast enclosure (coated)
- 4-wire installation

Other Highlights
- Plug and Measure functionality
- IP66 rated
- Graphic trending
- Transmitter configuration tool

Did You Know
With tools such as the Dynamic Lifetime Indicator, Time To Maintenance and Adaptive Calibration Timer, ISM technology on the M400 offers true predictive maintenance, resulting in fewer unscheduled shutdowns.

www.mt.com/M400

Parameter Specifications

pH/ORP (incl. pH/pNa)

Measurement parameters	pH, mV and temperature
pH display range	−2.00 to +16.00 pH
pH resolution	Auto/0.001/0.01/0.1/1 (can be selected)
pH accuracy[1)]	Analog: ±0.02 pH
mV range	−1500 to +1500 mV
mV resolution	Auto/0.001/0.01/0.1/1 mV (can be selected)
mV accuracy[1)]	Analog: ±1 mV
Temperature input[2)]	Pt1000/Pt100/NTC22k
Temperature measuring range	−30 to +140 °C (−22 to +284 °F)
Temperature resolution	Auto/0.001/0.01/0.1/1 (can be selected)
Temperature accuracy[1)]	Analog: ±0.25 °C (±0.45 °F)
Temperature compensation	Automatic/Manual
Max. sensor cable length	Analog: 10 to 20 m (33 to 65 ft) depending on sensor ISM: 80 m (260 ft)
Calibration	1-point, 2-point or process

1) ISM input signal causes no additional error.
2) Not required on ISM sensors

Amperometric oxygen

Measurement parameters	Dissolved oxygen (DO): Saturation or concentration and temperature Oxygen in gas: Concentration and temperature	
Measuring current range	Analog: 0 to −7000 nA	
Oxygen display ranges	Dissolved oxygen	Saturation: 0 to 500 % air, 0 to 200 % O2-sat Concentration: 0 ppb (µg/L) to 50.00 ppm (mg/L)
	In gas	Saturation: 0 to 100 vol-% O_2 Concentration: 0 to 9999 ppb O_2 gas
Oxygen accuracy[1)]	Dissolved oxygen: Saturation ±0.5 % of the measured value or ±0.5 %, depending on which is larger. Concentration at high values: ±0.5 % of the measured value or ±0.050 ppm/±0.050 mg/L, depending on which is larger. Concentration at low values: ±0.5 % of the measured value or ±0.001 ppm/±0.001 mg/L, depending on which is larger In gas: ±0.5 % of the measured value or ±5 ppb, depending on which is larger for ppm O_2 gas. ±0.5 % of the measured value or ±0.01 %, depending on which is larger for vol-% O_2.	
DO resolution	Auto/0.001/0.01/0.1/1 (can be selected)	
Polarization voltage	O_2 High: Cal/Meas: −675 mV (configurable) O_2 Low: Cal: −675 mV, Meas: −500 mV (configurable)	
Temperature input	Pt1000/Pt100/NTC22k	
Temperature compensation	Automatic	
Temperature measuring range	−10 to +80 °C (+14 to +176 °F)	
Temperature resolution	Auto/0.001/0.01/0.1/1 °C (°F) (can be selected)	
Temperature accuracy[1)]	±0.25 °C (±0.45 °F)	
Max. sensor cable length	Analog: 20 m (65 ft) ISM: 80 m (260 ft)	
Calibration	1-point (slope and offset) or process (slope and offset)	

1) ISM input signal causes no additional error.

Optical oxygen

Measurement parameters	Dissolved oxygen (DO): Saturation or concentration and temperature Oxygen in gas: Concentration and temperature	
Oxygen display ranges	Dissolved oxygen	Saturation: 0 to 500 % air, 0 to 200 % O_2-sat Concentration: 0 ppb (ug/L) to 50.00 ppm (mg/L)
	In gas	Saturation: 0 to 100 vol-% O_2 Concentration: 0 to 9999 ppb O_2 gas
Oxygen accuracy	±1 digit	
Oxygen resolution	Auto/0.001/0.01/0.1/1 (can be selected)	
Temperature compensation	Automatic	
Temperature measuring range	−30 to +150 °C (−22 to +302 °F)	
Temperature resolution	Auto/0.001/0.01/0.1/1 °C (°F) (can be selected)	
Temperature accuracy	±1 digit	
Max. sensor cable length	80 m (260 ft)	
Calibration	1-point (depending on sensor model) 2-point or process, process scaling	

Dissolved carbon dioxide

Measurement parameters	Dissolved carbon dioxide and temperature
CO_2 display range	0 to 5000 mg/L 0 to 200 % sat 0 to 1500 mm Hg 0 to 2000 mbar 0 to 2000 hPa
CO_2 accuracy	±1 digit
CO_2 resolution	Auto/0.001/0.01/0.1/1 (can be selected)
mV range	−1500 to +1500 mV
mV resolution	Auto/0.01/0.1/1 mV (can be selected)
mV accuracy	±1 digit
Total pressure range	0 to 4000 mbar
Temperature measuring range	−30 to +150 °C (−22 to +302 °F)
Temperature resolution	Auto/0.001/0.01/0.1/1 °C (°F) (can be selected)
Temperature accuracy	±1 digit
Max. sensor cable length	80 m (260 ft)
Calibration	1-point (offset), 2-point (slope and offset) or process (offset)

CO_2 hi (thermal conductivity)

Measurement parameters	Dissolved carbon dioxide and temperature
CO_2 display ranges	0 to 10 bar p (CO_2)/0 to 145 psi p (CO_2) 0 to 15 g/L 0 to 7 V/V CO_2
Accuracy in fluids[1)]	± 1 % of reading (within ±5 % of calibration temperature) ± 2 % of reading over temperature range 0 to 50 °C (32 to 122 °F)
Calibration	1-point or process

1) Complete loop of sensor and transmitter

GPro 500 TDL

Measurement parameters	O_2, O_2 and temperature, CO (ppm), CO (%), H_2O, CO_2 (%), H_2S, HCl
Gas display ranges	0 to 100 %
Gas accuracy, resolution, repeatability and low detection limit	Depending on sensor model
Linearity	Better than 1 %
Drift	Negligible (<2 % of measurement range between maintenance intervals)
Sampling rate	1 second
Response time (t_{90})	Depending on sensor model
Process pressure ranges	Depending on sensor model
Process temperature ranges	0 to 250 °C (32 to 482 °F) optional (for probe installation) 0 to 600 °C (32 to 1112 °F) with additional thermal barrier 0 to 150 °C (32 to 302 °F) (white cell)
Max. sensor cable length	40 m (130 ft) (FM version)
Calibration	1-point (offset) or process (slope or offset)

Dissolved ozone

Measurement parameters	Concentration and temperature
Display range for current	Analog: 0 to −7000 nA
Ozone measuring range	0 to 5000 ppb (µg/L) O3
Ozone accuracy	±1 % (or 0.4 ppb) up to 2000 ppb ±2.5 % (or 50−125 ppb) from 2000 to 5000 ppb
Resolution	±1 digit
Temperature compensation	Automatic
Temperature measuring range	5 to +50 °C (+41 to +122 °F)
Temperature resolution	Auto/0.001/0.01/0.1/1 (can be selected)
Temperature accuracy 1)	Analog: ±0.25 °C (±0.45 °F)
Max. sensor cable length	80 m
Calibration	1-point (offset) or process (slope and offset)

Conductivity 2-e/4-e

Measurement parameters	Conductivity/resistivity and temperature
Conductivity ranges	See sensor specification
Chemical concentration curves (used with 4-e sensors)	NaCl:0–26 %@0 °C to 0 – 28 %@+100 °C NaOH:0–12 %@0 °C to 0–16 %@+ 40 °C to 0–6 %@+100 °C HCl:0–18 %@–20 °C to 0–18 %@0 °C to 0–5 %@+50 °C HNO_3:0–30 %@–20 °C to 0–30 %@0 °C to 0–8 %@+50 °C H_2SO_4:0–26 %@–12 °C to 0–26 %@+5 °C to 0–9 %@+100 °C H_3PO_4: 0–35 %@+ 5 °C to +80 °C
TDS ranges	NaCl, $CaCO_3$
Cond/Res accuracy[1)]	Analog: ±0.5 % of reading or 0.25 Ω, whichever is greater
Cond/Res repeatability[1)]	Analog: ±0.25 % of reading or 0.25 Ω, whichever is greater
Cond/Res resolution	Auto/0.001/0.01/0.1/1 (can be selected)
Temperature input	Pt1000
Temperature measuring range	–40 to +200 °C (–40 to +392 °F)
Temperature resolution	Auto/0.001/0.01/0.1/1 (can be selected)
Temperature accuracy (±0.90 °F) outside	Analog: ±0.25 °C (±0.45 °F) within –30 to +150 °C (–22 to +302 °F); ±0.50 °C
Max. sensor cable length	Analog: 2-e sensors: 61 m (200 ft); 4-e sensors:15 m (50 ft) ISM: 2-e sensors: 90 m (300 ft); 4-e sensors: 80 m (260 ft)
Calibration	1-point, 2-point or process

1)ISM input signal causes no additional error.

M400 Type 1 Cond Ind: Reliable Transmitter
For Inductive Conductivity Sensors

The M400 Type 1 Cond Ind is a 4-wire, single-channel process transmitter designed specifically for use with analog inductive conductivity sensors. A large four line backlit Liquid Crystal Display conveys measuring data and setup information. The menu structure allows the operator to modify all operational parameters by using keys on the front panel. A menu-lockout feature, with password protection, is available to prevent the unauthorized use of the meter. The transmitter M400 Type1 Cond Ind can be configured to use its four analog and / or six relay outputs for process control.

Specifications

General	
Power supply	100 to 240 VAC, or 20 to 30 VDC, 10 VA
Frequency for AC	50 to 60 Hz
Current output	4 × 0/4 to 20 mA
Display	4 line backlit LCD with 5 tactile keys
Enclosure	Polycarbonate
Languages	8 (English, German, French, Italian, Spanish, Portuguese, Russian and Japanese)
Ambient temperature	–20 to 50 °C (–4 to 122 °F)
Relative humidity	0 to 95 % non-condensing
Rating	IP65
Approvals	cFMus Class I Division 2
PID process controller	Yes
Control input (Hold)	2
USB interface	1 × USB Device: Provide real-time data output, instrument configuration capabilities and software update interface via PC

Other Highlights

Versatile Mixed-Mode Input
Multi-parameter transmitter for advanced process control, with analog input for inductive conductivity and digital input for pH/ORP.

Intelligent Measuring Solutions
Keep your process under control with ISM for low cost of ownership and real-time status information from the sensor for true predictive maintenance

Minimized Maintenance Costs
The ISM Plug and Measure feature allows measurement readiness within seconds. Simplified commissioning minimizes risk of installation troubles

Inductive Conductivity Specifications

Measurement ranges	See sensor specification
Chemical concentration curves	NaCl: 0–26 % @ 0 °C to 0–28 % @ +100 °C NaOH-1: 0–13 % @ 0 °C to 0–24 % @ +100 °C NaOH-2: 15–50 % @ 0 °C to 35–50 % @ +100 °C HCl-1: 0–18 % @ –20 °C to +50 °C HCl-2: 22–39 % @ –20 °C to +50 °C HNO_3-1: 0–30 % @ –20 °C to +50 °C HNO_3-1: 35–96 % @ –20 °C to +50 °C H_2SO_4-1: 0–26 % @ –12 °C to 0–37 % @ +100 °C H_2SO_4-2: 28–88 % @ 0 °C to 39–88 % @ +95 °C H_2SO_4-3: 94–99 % @ –12 °C to 89–99 % @ +95 °C H_3PO_4: 0–35 % @ +5 °C to +80 °C User-defined concentration table (5×5 matrix)
TDS ranges	NaCl, $CaCO_3$
Sensor maximum distance	10 m
Cond/Ind accuracy	±1 % of reading ±0.005 mS/cm
Cond/Ind repeatability	±1 % of reading ±0.005 mS/cm
Cond/Ind resolution	Auto/0.01/0.01/0.1 (can be selected)
Temperature input	Pt1000/Pt100/NTC22K
Temperature measuring range	–40 to +200.0 °C (–40 to 392 °F)
Temperature resolution	Auto/0.001/0.01/0.1/1 K (°F) (can be selected)
Temperature accuracy	±0.25 K (±0.45 °F) within –30 to 150 °C ±0.50 K (±0.90 °F) outside
Temperature repeatability	±0.13 K (±0.23 °F)
Max. sensor cable length	Analog: 10 to 20 m (33 to 65 ft) depending on sensor ISM: 80 m (260 ft)
Calibration	1-point, zero or process

M800: Multi-Parameter, Multi-Channel Transmitter

Touch the Future

CE ISM

The M800 transmitter series features premium Intelligent Sensor Management (ISM) technology measuring pH/ORP, optical DO, amperometric oxygen (DO as well as O_2 gas), dissolved carbon dioxide, turbidity and conductivity. The multi-parameter transmitter accepts any compatible combination of ISM sensors. Up to four channels of process measurement provides immediate Plug and Measure installation and operation, predictive sensor maintenance and dynamic lifetime status. The color touchscreen ensures intuitive operation, with user selectable control and alarm management.

Specifications

General Specification	
Measurement parameters	pH/ORP, amperometric and optical oxygen, conductivity, dissolved carbon dioxide, turbidity and temperature
ISM	Plug and Measure, advanced diagnostics (Dynamic Lifetime Indicator, Adaptive Calibration Timer, CIP/SIP counter etc.), iMonitor
Power supply	100 to 240 VAC, or 20 to 30 VDC, 10 VA
AC frequency	50 to 60 Hz
Current (analog) outputs[1)]	8 × 0/4 to 20 mA, 22 mA alarm
User interface	Color touchscreen 5.7", resolution 320 × 240 px, 256 colors
Languages	10 (English, German, French, Italian, Spanish, Portuguese, Russian, Japanese, Korean and Chinese)
Ambient temperature	–20 to 50 °C (–4 to 122 °F)
Relative humidity	0 to 95 %, non-condensing
Rating	IP 66
PID process controller	2
Control input (Hold)	Yes
Analog input	Yes
Alarm contact	Yes (alarm delay 0 to 999 s)
Measuring range	Parameter and sensor depending
Measuring accuracy	± 1 digit (sensor depending)
Measuring repeatability	± 1 digit (sensor depending)
Measuring resolution	Auto/0.001/0.01/0.1/1 (can be selected)

1) Not supported on Profinet model; 1 current output on Ethernet/IP model.

Features Overview

– Color touchscreen
– Intuitive operation
– Premium ISM functionality
– Multi-parameter measurement
– 1-/2-/4-channel versions
– iMonitor™
– User management and logbook

Other Highlights

– 8 current outputs
– 8 output relays
– Traffic light coded sensor information
– IP 66 rated
– 2 PID process controllers

Did You Know
The M800 1-channel transmitter with mixed mode functionality supports analog and digital ISM sensors.

Other Highlights of Profinet and Ethernet/IP multi-parameter transmitters

- Pure digital communication within loop and real-time sensor aging monitoring provides greater process reliability
- Easy integration of measurement and diagnostics data from the sensor up to the process control level
- Advanced diagnostic settings for efficient and reliable plant management

The M800 Profinet and Ethernet/IP multi-parameter transmitters bring the value of Intelligent Senor Management technology to industrial Ethernet. They cover ISM sensors for pH/ORP, conductivity, optical DO, amperometric oxygen (DO as well as O_2 gas), dissolved carbon dioxide, and turbidity, and provide all ISM measurements and diagnostics information to a centralized control system for data management including predictive diagnostics. Both M800 Profinet and Ethernet/IP series provide 1-channel and 2-channel models.

Besides the intuitive operation and alarm management that provided by exist M800, the Profinet and Ethernet/IP communication protocols provide easy integration of sensor diagnostics tools into process control systems, minimum commissioning time and engineering support, saves the integration efforts and costs.

Pure digital communication within loop and real-time measurements, sensor diagnostics and monitoring provides greater process reliability, lower maintenance costs.

Profinet and Ethernet/IP Specifications

Data transmission rate	10–100 MBd
Connector	RJ45, M12 optional
IP address	DHCP(default) or configuration via menu

M800 Parameter Fit Guide for 2-/4-channel, 1-/2-channel Profinet, 1-/2-channel Ethernet/IP versions

These versions are compatible with the following (digital) ISM sensors.

M100 DIN Rail:
High Performance and Minimal Space Requirement
Compact Design for Simplified Installation

HART COMMUNICATION PROTOCOL

ISM

CE

The M100 DIN Rail (DR) is a single-channel, 2-wire multi-parameter transmitter with HART communication capability for analytical measurements. It is compatible with ISM sensors for measuring pH/ORP, pH/pNa, oxygen and conductivity. The ISM's Plug and Measure feature minimizes the risk of installation troubles and simplifies sensor handling and LEDs clearly indicate transmitter and sensor status, alarms, and warnings.

Thanks to its compact design the M100 DR requires only a small installation space in the plant.

The transmitter configuration and integration of sensor diagnostics into asset management tools is possible thanks to the integrated HART protocol. The support of all major asset management tools ensures maximum compatibility and easy integration of sensor diagnostics.

Specifications

General	
Supply voltage	14 to 30 VDC
Number of outputs	1 × 4 to 20 mA (loop powered)
Ambient temperature	–10 to 60 °C (14 to 140 °F)
Relative humidity	0 to 95 % non-condensing
Enclosure rating	IP 20
Housing material	PA-FR
Hold input	Yes
Analog input	1 × 4 to 20 mA (for pressure compensation)
Communication	HART
Asset management tool compatibility	AMS versions 10, 11, 12, Simatic 6,8x, FDT frame applications

Features Overview

– DIN rail mounting, suitable for 35 mm wide DIN rail systems
– Compact housing, 22.5 mm width
– Displayless
– Multi-parameter transmitter
– 1 analog output (4 to 20 mA with HART)
– HART communication as standard
– Configuration via HART handheld or other HART asset management tools

ISM Highlights

– Plug and Measure functionality
– Dynamic Lifetime Indicator
– Adaptive Calibration Timer
– Time To Maintenance
– CIP/SIP/Autoclaving counter
– Easy installation and fast commissioning

M100 Sensor Mount Transmitter: Digital Sensor Integration for Analog and Digital Biocontrollers

Smallest Footprint for Simplified Installation

The M100 Sensor Mount (SM) is a single-channel, multi-parameter transmitter. It allows the connection on biocontrollers of 1-wire ISM sensors for measuring pH, ampDO and CO_2 or ISM RS 485 optical oxygen sensors. The M100 SM has a Bluetooth 4.0 interface which is compatible with the PC-based and mobile versions of ISM Core software. Two independent interfaces are implemented: two configurable 4/20 mA analog outputs and one digital Modbus RTU. LEDs clearly indicate sensor status, alarms and warnings. ISM's Plug and Measure feature minimizes the risk of installation trouble and simplifies sensor handling.

Specifications

ISM features	Plug and Measure, DLI, ACT, TTM
Enclosure	IP 67
Mounting	On head of 1-wire sensor: AK9 On head of RS485 sensor: VP8
Supply voltage	24 VDC
Analog output	Active 2 × 4 to 20 mA, galvanically isolated to passive DCS card
Communication	Wireless: BT 4.0 ISM Core PC-based and ISM Mobile (Android, iOS) Wired: Digital interface RS485 Modbus RTU
Sensor compatibility	ISM 1-wire pH, amperometric DO and carbon dioxide sensors. ISM RS485 optical DO sensors

Features Overview

- Configurable alarms
- Device naming
- Modbus communication
- ISM functionality
- Multi-parameter unit
- Configuration via ISM Core / ISM Mobile
- Process calibration with ISM Core / ISM Mobile or Modbus
- Color LED indication of sensor status
- Intuitive operation with ISM Core
- iMonitor

Other Highlights

- CIP/SIP counter
- Dynamic Lifetime Indicator
- Adaptive Calibration Timer
- Easy installation
- Error-free operation: configuration stored in transmitter
- Electronic Data Management with ISM Core

www.mt.com/M100

M80 Sensor Mount Transmitter

ISM Solution for Benchtop Controllers

Modbus

The M80 Sensor Mount (SM) Transmitter is a compact single-channel, multi-parameter transmitter designed especially for biocontroller manufacturers. Its small footprint allows mounting on ISM sensors used in benchtop bioreactors with a typical volume of 1–20 liters. A Modbus RTU interface enables straightforward and digital integration of sensor measurement data, ISM diagnostic information, and calibration routines into the biocontroller firmware. In addition, visualization of ISM features on the controller's graphical user interface becomes possible. The M80 SM is compatible with METTLER TOLEDO pH/ORP, amperometric dissolved oxygen, dissolved CO_2, and conductivity sensors.

Specifications

ISM	Plug and Measure, DLI, ACT, TTM
Power supply	24 VDC (min. 100 mA), 8–30 VDC (min. 2 W)
Operating temperature	–15 to +60 °C (5 to 140 °F)
Relative humidity	5 … 95 % rH (non-condensing)
Mounting	AK9 connector on head of 1-wire sensor
Cable connection	M12/5-pin for RS485 interface and power supply
Communication	Modbus RTU protocol
Dimensions	Height: 94 mm (3.7"), Maximum diameter: 22 mm (0.87")
Protection class	IP65

Features Overview

- Small footprint on bioreactor head plate
- Enables ISM functionality in biocontroller software
- Access to sensor calibration routines via the biocontroller
- No sensor configuration necessary due to internal storage of installation point specific data (Modbus parameters)
- Trouble-free sensor integration thanks to Plug and Measure
- Configurable with M80 SM Transmitter Configuration Tool PC software and Transmitter Configuration Box

Other Highlights

- Robust digital sensor integration
- Ideal for ISM solutions in R&D environment and down-scaling applications
- Pre-batch sensor diagnostics for more robust processes
- Enables electronic traceability of sensors used in different batches
- Less electronic waste compared to pH sensors with permanently integrated transmitter electronics

M400 2-Wire: Reliable and Intelligent

For Hazardous and Non-Hazardous Area Applications

The M400 2-wire, single-channel, multi-parameter transmitter for pH/ORP, dissolved oxygen, gas phase oxygen, conductivity and dissolved carbon dioxide provides highest reliability and process safety in hazardous and non-hazardous area environments. Advanced ISM functionality enables predictive maintenance resulting in reduced operating costs and helps to improve productivity. The HART, Foundation Fieldbus (FF) or PROFIBUS PA interface provides easy integration of sensor diagnostics tools into process control systems.

Features Overview

- NEPSI Ex/ATEX/FM approved
- Mixed-mode input (analog or ISM sensors accepted)
- Multi-parameter unit
- 4 to 20 mA (with HART) or Foundation Fieldbus version or PROFIBUS PA
- Compatible with ODO sensors
- IP 66/NEMA 4X rated

Other Highlights

- Plug and Measure functionality
- CIP/SIP/Autoclaving counter
- Dynamic Lifetime Indicator
- Adaptive Calibration Timer
- Quick set up mode for fast installation

Specifications

General		
Display		Backlit LCD, 4 lines

Parameter Specifications

pH, pH/pNa and ISFET Performance	
Measurement parameters	pH, mV, and temperature
pH, ORP input range*	–1500 to 1500 mV
pH display range	–2 to 16 pH
Resolution	0.001/0.01/0.1/1 (can be selected)
Relative accuracy	±0.02 pH; ±1 mV
Temperature input	Pt 1000, Pt 100, NTC 22 kΩ
Temperature compensation	Automatic/manual
Temperature measuring range	–30 to 130 °C (–22 to 266 °F)
Temperature resolution	0.001/0.01/0.1/1 °C/°F (can be selected)
Temperature measurement error*	±0.25 °C (±0.45 °F)
Max. length sensor cable	analog: 20 m (65 ft), depending on sensor; ISM 80 m (260 ft)
Calibration	1 or 2 point calibration, process calibration

* For analog input signal (ISM input signal causes no additional error)

Oxygen Performance	
Measurement parameters	– Dissolved oxygen: Saturation or concentration and temperature – Oxygen in gas: Concentration and temperature
Current range	0 to 7000 nA
Oxygen measuring ranges	– Dissolved oxygen: Saturation 0 to 500 % air, 0 to 200 % O_2 Concentration 0.1 ppb (µg/L) to 50.00 ppm (mg/L) – In gas: 0 to 9999 ppm O_2 gas, 0 to 100 Vol-% O_2
Oxygen accuracy*	
– Dissolved oxygen saturation	±0.5 % of the measured value or ±0.5 % air, whichever is greater. Concentration at high values: ±0.5 % of the measured value or ±0.050 ppm/±0.050 mg/L, whichever is greater. Concentration at low values: ±0.5 % of the measured value or ±0.001 ppm/±0.001 mg/L, whichever is greater.
– In gas:	±0.5 % of the measured value or ±5 ppb, whichever is greater for ppm O_2 gas. ±0.5 % of the measured value or ±0.01 %, whichever is greater for Vol-% O_2.
Resolution current	6 pA
Polarization voltage	–1000 to 0 mV for analog sensors –550 mV or –674 for ISM sensors (configurable)
Temperature input	Pt 1000
Temperature compensation	Automatic
Temperature measuring range	–30 to 150 °C (–22 to 302 °F)
Temperature accuracy*	±0.25 K in the range of –10 to +80 °C (14 to +176 °F)
Max. length sensor cable	analog: 20 m (65 ft); ISM 80 m(260 ft)
Calibration	1-point (slope or offset) calibration, process calibration (slope or offset) calibration

* For analog input signal (ISM input signal causes no additional error)

Conductivity Performance	
Measurement parameters	Conductivity, and temperature
Conductivity ranges (2-e/4-e)	2-electrode sensor: 0.02 to 2000 µS/cm (500 Ω × cm to 50 MΩ × cm) 4-electrode sensor: 0.01 to 650 mS/cm (1.54 Ω × cm to 0.1 MΩ × cm)
Temperature input	Pt 1000
Temperature measuring range	–40 to 200 °C (–40 to 392 °F)
Max. length sensor cable	60 m (196.9 ft) with 2-electrode sensor, 15 m (50 ft) with 4-electrode sensor 80 m (260 ft) with ISM sensor
Cond/Res accuracy*	±0.5 % of reading or 0.25 Ω, whichever is greater, up to 18 MΩ×cm
Cond/Res repeatability*	±0.25 % of reading or 0.25 Ω, whichever is greater
Cond/Res resolution	0.001/0.01/0.1/1 (can be selected)
Temperature resolution	0.001/0.01/0.1/1 °C/°F (can be selected)
Temperature accuracy*	±0.25 °C (±0.45 °F)
Temperature repeatability*	±0.13 °C (±0.23 °F)
Chemical concentration curves	NaCl, NaOH, HCl, HNO_3 H_2SO_4, H_3PO_4 User-defined concentration table (5 × 5 matrix) TDS ranges NaCl, $CaCO_3$
Calibration	1 or 2 point calibration, process calibration

* For analog input signal (ISM input signal causes no additional error)

Parameter Specifications (continued)

Optical Oxygen Performance	
Measurement parameters	DO saturation or concentration and temperature
DO saturation range	0 to 500 %, 0 to 100 % O_2
DO resolution	Auto/0.001/0.01/0.1/1 (can be selected)
DO accuracy	± 1 digit
Temperature resolution	Auto/0.001/0.01/0.1/1 °C (°F) (can be selected)
Temperature accuracy	± 1 digit
Temperature compensation	Automatic
Max. length sensor cable	15 m (50 ft)
Calibration	1 point (depending on sensor model), 2 point, process calibration

Dissolved Carbon Dioxide Performance	
Measurement parameters	Dissolved carbon dioxide and temperature
Dissolved carbon dioxide range	0 to 5000 mg/L, 0 to 200 % sat, 0 to 1500 mmHg, 0 to 2000 mbar, 0 to 2000 hPa
mV range	−1500 to 1500 mV
Total pressure range	0 to 4000 mbar
Dissolved carbon dioxide accuracy	± 1 digit
Resolution	Auto/0.001/0.01/0.1/1 (can be selected)
Temperature range	−30 to 150 °C (−22 to 302 °F)
Temperature resolution	Auto/0.001/0.01/0.1/1 °C/°F (can be selected)
Temperature accuracy	± 1 digit
Temperature repeatability	± 1 digit
Max. length sensor cable	80 m (260 ft)
Calibration	1 or 2 point calibration, process calibration

Inductive Conductivity (M400 Cond Ind transmitter only)	
Measurement parameters	Conductivity and temperature
Display range	0 to 2,000 mS/cm
Chemical concentration curves	NaCl: 0 – 26 % @ 0 °C to 0 – 28 % @ +100 °C NaOH-1: 0 – 13 % @ 0 °C to 0 – 24 % @ +100 °C NaOH-3: 15 – 50 % @ 0 °C to 35 – 50 % @ +100 °C HCl-1: 0 – 18 % @ −20 °C to +50 °C HCl-2: 22 – 39 % @ −20 °C to +50 °C HNO_3-1: 0 – 30 % @ −20 °C to +50 °C HNO_3-2: 35 – 96 % @ −20 °C to +50 °C H_2SO_4-1: 0 – 26 % @ −12 °C to 0 – 37 % @ +100 °C H_2SO_4-2: 28 – 88 % @ 0 °C to 39 – 88 % @ +95 °C H_2SO_4-3: 94 – 99 % @ −12 °C to 89 – 99 % @ +95 °C H_3PO_4: 0 – 35 % @ + 5 °C to + 80 °C User-defined concentration table (5 × 5 matrix)
TDS ranges	NaCl, $CaCO_3$
Conductivity accuracy	± 1.0 % of reading or ± 0.005 mS/cm
Conductivity repeatability	± 1.0 % of reading or ± 0.005 mS/cm
Conductivity resolution	Auto/0.001/0.01/0.1/1 (can be selected)
Temperature input	Pt1000/Pt100/NTC22K
Temperature measuring range	−40 to + 200 °C (−40 to + 392 °F)
Temperature resolution	Auto/0.001/0.01/0.1/1 (can be selected)
Temperature accuracy	± 0.25 K (± 0.45 °F) within −30 to + 150 °C (−22 to + 302 °F); ± 0.50 K (± 0.90 °F) outside
Temperature repeatability	± 0.13 K (± 0.23 °F)
Max. sensor cable length	10 m (32.8 ft)
Calibration	1-point, zero point or process

M400 2(X)H Type 2 and Type 3: Easy to Use and Robust
For Harsh and Hazardous Areas

The M400 2(X)H Type 2 and Type 3 is a 2-wire, single-channel, multi-parameter process transmitter designed specifically for applications in hazardous or safe areas.
M400 2(X)H Type 2 and Type 3 has an advanced interface that is simple to operate. The large, dot matrix display ensures readability under all light conditions. Local or remote access via HART™ technology provides easy access to ISM sensor and diagnostic tools data. With its durable aluminum die-cast housing, anti-corrosive coating, stainless steel nuts and extensive certificates and approvals, it is suitable for implementation in the chemical, petrochemical, and pharmaceutical industries.

HART COMMUNICATION PROTOCOL

ISM

Other Highlights

• Easy Operation – Less Training Needed

It provides with intuitive multi-language (10 languages) interface with readable display under all light conditions. The ISM Plug and Measure feature allows measurement readiness within seconds and enables error-free sensor installation.

• Robust Design for Tough Environments

The aluminum housing, anti-corrosive coating and stainless steel nuts are designed for harsh environments and hazardous area use. Extensive global approvals (CE, ATEX, IECEx, UKCA, FM, CSA, NEPSI, JPEx, KCs) ensure suitability for harsh and hazardous areas.

Specifications

General	
Display	4.4-inch TFT LCD Backlight
Languages	10 (English, German, French, Italian, Spanish, Portuguese, Russian, Japanese, Korean, and 1Chinese)
Ambient temperature	–20 to 60 °C (–4 to 140 °F)
Relative humidity	0 to 95 % non-condensing
Enclosure rating	IP66/NEMA 4X
Housing material	Aluminum die cast housing with anticorrosive coating
Certificates and Approvals	CE, ATEX, IECEx, UKCA, FM, CSA, NEPSI, JPEx, KCs
M400 2H (ISM) Type 2:	• cCSAus/FM Class I, Division 2, Groups A, B, C, D T4A • cCSAus/FM Class I, Zone 2, Groups IIC T4

Other Highlights(cont.)

• Flexible for Multiple Applications

With its multi-parameter capability (pH, ORP, conductivity, dissolved oxygen, dissolved CO_2, and gas-phase oxygen) and compatibility with both digital and analog sensors, it is suitable for a wide range of applications.

• Universal Connectivity

HART technology gives access to device information, measured values, ISM sensor diagnostics data, and allows use of remote calibration tools, DTM, and handheld field communicators.

ISM Core
Maximum Performance of ISM Sensors

ISM

21 CFR Part 11 & Annex 11 ready

ISM Core CFR is technically compliant with 21 CFR Part 11 and EudraLex Volume 4 Annex 11.

ISM Core offers a unique means to optimize the performance of pH electrodes, oxygen and carbon dioxide sensors for enhanced reliability and process safety. Simply connect your ISM sensor via USB or Bluetooth to your PC and get access to various intuitive analysis, calibration and documentation applications. Pre-calibrate your ISM sensor with the accuracy of lab conditions and assess the sensor state with real-time diagnostic information. This allows you to decide instantly whether to re-use or discard a sensor. Calibration information is collected, managed and analyzed efficiently and documented consistently to satisfy regulatory requirements.

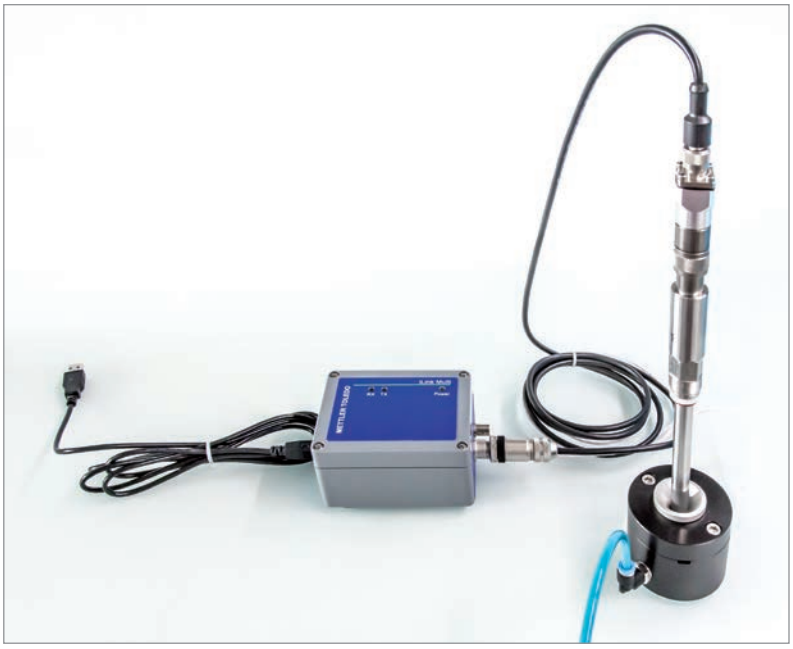
Specifications

Performance		
Measurement parameters	**pH/ORP**	all digital ISM sensors
	Oxygen	all digital ISM sensors
	CO_2	InPro 5000 i
pH calibration		1-point, 2-point, 3-point, process
ORP calibration		1-point, process
DO calibration for amp. sensors		1-point, process
DO calibration for optical sensors		1-point, 2-point, scaling
CO_2 (InPro 5000 i) calibration		1-point, 2-point, process
M100 SM settings		Yes
Sensor field calibration dataset		Yes
Sensor database		Yes
Database backup		Yes
Key performance indicators (KPI)		Yes
Recommended PC requirements		
Processor		iCore™
RAM		4 GB
Screen resolution		1280 × 1024 or higher
Hard disk		250 MB available space
Operating system		MS-Windows 7/8/8.10 (at least XP SP3 or later)
Interface		USB and/or Bluetooth™ (depending on the accessory)

Features Overview
- Automatic PDF protocols with sensor registration/calibration/adjustments/deactivation
- Protocols of field calibration
- Full sensor history
- Database export for further analysis

Other Highlights
- Intuitive Windows™ interface
- Early detection of worn-out sensors
- Comprehensive, at a glance sensor status analysis

▸ **www.mt.com/ISM Core**



iLink Multi is a universal device for connecting digital ISM sensors (1-wire; RS 485) to a PC/laptop running ISM Core software. When calibrating an optical DO sensor with the iLink Multi, calibration parameters are captured automatically using the built-in, physical parameter sensors.

Did You Know
ISM Mobile allows you to check sensor status or conduct calibrations from the convenience of your phone. Download is free at Google Play or iTunes.

Verification Kits

Simulating Sensors and Validating Transmitters

The pH, O_2 and the CO_2 Verification Kits are sets of five different service tools that allow the simulation of reading values of pH, O_2 and the CO_2 ISM sensors with predefined measuring values and errors (not changeable by the user). Each tool corresponds to a METTLER TOLEDO ISM sensor and delivers a complete set of data information. They can also be used for control of loop and transmitter settings, as control of the transmitter's temperature compensation and general troubleshooting. Each verification kit is provided with a certificate.

Specifications

ISM Verification Kits	
ISM Simulator pH Kit	pH 4, pH 7, toggle, ERR1, ERR2
ISM Simulator O_2 (InPro 6850i) Kit	Zero, Air, toggle, ERR1, ERR2
ISM Simulator O_2 ppb (InPro 6900i/InPro 6950i) Kit	Zero, Air, toggle, ERR1, ERR2
ISM Simulator CO_2 (InPro 5000i) Kit	15 mbar, 950mbar, toggle, ERR1, ERR2
Optical O_2 (InPro 6860i, InPro 6870i, InPro 6960i, InPro 6970i, THO ODO) Simulator	Zero, Air 1, Air 2, toggle, ERR1, ERR2

pH Analog Verification Kits	
pH Simulator 112	pH 4, pH 7, pH 9
VP Simulator	20 °C (Pt100 or Pt1000), 50 °C (Pt100 or Pt1000)

Certificates and Approvals

Did You Know

The ISM pH, oxygen and CO_2 service tools are unique products that can control and verify loop and transmitter settings. The simulators generate a comprehensive dataset of non-modifiable ISM parameters.

Optical O_2 Simulator

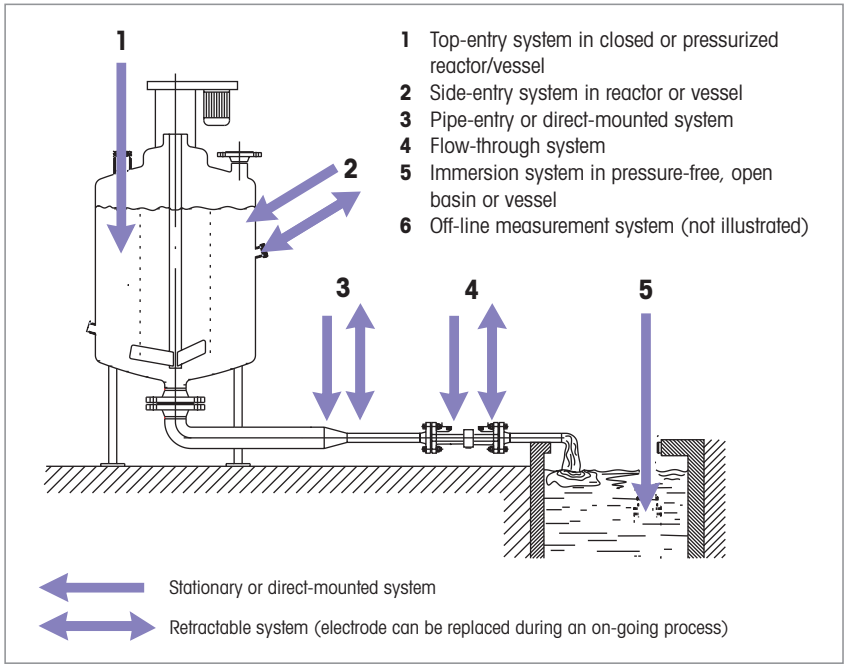
pH Analog Verification Kits: Combining the pH simulator 112 ① with the VP simulator ② both pH and Temperature signals can be simulated to check the automatic temperature compensation capability of the transmitter.

Process Connection Hardware
Solutions for Every Challenge

METTLER TOLEDO Ingold offers a comprehensive line of products to connect to all common process environments – open basins, pipes, closed tanks, chemical reactors, bioreactors, and fermentation vessels. Depending upon the application, each connection type can have specific requirements for strength, safety, cleanliness, optimized performance, corrosion resistance, insertion depth, or physical space. Process connection hardware ranges from simple drop-in immersion fittings to complex automated systems capable of cleaning and calibrating your measuring equipment. The choice is yours! METTLER TOLEDO Ingold and your local representatives have worked extensively with a wide variety of process environments and can assist you in selecting the best hardware for your application.

The primary considerations when selecting a housing are:

1. Stationary or retractable housing
2. Connection entry: top-entry, side-entry, etc. (see illustration)
3. Connection style: cap nut, threaded NPT, etc.
4. Diameter of connection hole (bore size)
5. Insertion length
6. Wetted part materials: stainless steel, PVC, etc.
7. Process seal material (O-rings/gaskets)



Common Entry/Style	Threaded Cap Nut	Threaded NPT	ANSI/DIN Flange	Ladish (Tri-Clamp)	Tuchenhagen/ Varivent
1 Top-Entry	•	•	•	•	–
2 Side-Entry	•	•	•	•	•
3 Pipe-Entry	•	•	•	–	–
4 Flow-Through	•	•	•	–	–
5 Immersion	–	–	–	–	–

Common Wetted Parts	Key
Stainless Steel 316L	SS 316L
Stainless Steel 316L with Electropolish	SS E-P
Stainless Steel 316L with Machined Surface	R_a XX
Hastelloy	HA-C22
Titanium	Ti
PVC	PVC
PVDF	PVDF
PTFE	PTFE

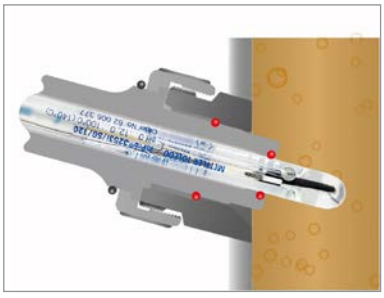
Common O-rings	Key
EPDM FDA Listed	EP
EPDM Peroxide Cured	EP-pc
Kalrez® FDA Listed USP Class VI	Ka-FDA-USP VI
Silicone FDA Listed USP Class VI	Si-FDA-USP VI
Silicone Peroxide Cured	Si-pc
PTFE/PTFE Coated*	N/A
Viton® FDA Listed	Vi

* As tested PTFE materials failed to provide acceptable elastomeric sealing and are not recommended.

This section has been organized according to the seven requirements listed above. To simplify selection, first decide if you prefer stationary, retractable, or flow through design and turn to the corresponding section that follows. A variety of different housings are available in each section to meet your specific entry-type, connection style, and other requirements.

The Ingold Socket and Safety Socket
Recognizing the need for a strong, sanitary, and safe process connection, Ingold engineered a socket to exceed the requirements found in the most demanding process environments.

When used with an appropriate housing, the Ingold Safety Socket allows the housing O-ring to break its seal while the cap nut retains a safe thread engagement. (See diagram below).



Retractable housings:

- **Secure**
- **Self-cleaning**
- **Process-independent**
- **Manual or automated**
- **Insertion lock without sensor**
- **For use in hazardous areas (ATEX, FM certificates)**

Ingold housings
The hardware used to connect your analytical system to your process is now more important than ever and can actually improve your overall operating efficiency.

Retractable housings, first pioneered by METTLER TOLEDO Ingold, have now evolved into highly-sophisticated components which are process-independent, making sensor maintenance possible at any time without interrupting your process. Pneumatically operated housings insert and retract sensors automatically and form the cornerstone of a fully autonomous analytical system, capable of unattended cleaning and calibration. With an automated system your highly-skilled maintenance staff is able to focus on critical maintenance and repair projects rather than cleaning and calibrating sensors, raising the efficiency and productivity of your operation. For more information on automated maintenance systems, see page 140.

Stationary housings are widely used in all industries, providing a secure, durable, and safe way to position sensing devices in a process. Once connected, however, the stationary housing and sensor must be left in place until the process stops or flow is interrupted and the tank/pipe is drained.

Wide range of process connections
Only a representative sample of Ingold's extensive process connection products are included in this catalog. Please refer to the METTLER TOLEDO product literature for more information.

Don't see exactly what you need?
METTLER TOLEDO Ingold has more than 50 years of experience engineering specialized components or altering existing products to meet specific project requirements. Whether your need is for process resistant metals, special finishes, or modified dimensions, challenge us – chances are we have already designed what you need.

Looking for a non-standard connection?
A growing number of projects co-locate redundant production facilities around the globe, occasionally standardizing process connections. METTLER TOLEDO Ingold is an international company, working with clients world-wide to equip state-of-the-art processing facilities with liquid analytical systems.
If your project requires special process connections, we can help.

Sockets, Flanges, and Plugs
Reliable Adaption to the Process

Weld-in Sockets and Flanges

Ingold Socket and Safety Socket (DN25 and DN25/S)
The new safety weld-in sockets provide increased protection in the event of any premature attempt to remove the housing when the reactor or pipe is still under pressure or filled with medium. The socket is designed to prevent possible injury, damage or loss of medium. The Ingold Safety Socket is EHEDG approved.

Safety Feature:
– InFit 761-NC
– InFit 764-50-NC
– InPro 68xx

No Safety Feature:
– All previous types of housings or 25 mm DO sensors can be used, but without the benefit of the safety feature.

InFit 761 e

High Versatility with a Wide Selection of Process Connections

The InFit 761 e series housings are stationary housings for 12 mm sensors with a Pg 13.5 threaded collar. This is one of the most versatile housings in the Ingold product line due to the wide availability of materials, O-rings, process connections, and insertion lengths. Rugged plastic (PVDF, PP), stainless steel, and Hastelloy (optional) versions stand up to harsh and demanding environments encountered in industrial processing and industrial wastewater applications. For extreme hygienic requirements, the InFit 761 e is available in 316 L stainless steel configurations (EHEDG and 3 A compliant), and also with N5/R_a 16 surface finishes to meet the most stringent regulatory guidelines.

Specifications

	InFit 761 e, Steel Version	InFit 761 e, Plastic Version
Wetted parts	Stainless 316 L	PVDF, PP
Surface finish (O-ring groove/Other)	Hygienic: (< R_a 0.38 µm/ R_a 15 µin)* + electropolished Others: R_a 0.4 µm/R_a 16 µin	R_a 0.8 µm/R_a 32 µin

Pressure rating (Sensor dependent)	Max. 16 bar/232 psig	Max. 6 bar/87 psig**
Certificates and Approvals	EHEDG and 3 A compliant (CIP shaft only) ATEX/FM certificates (metallic version only): Pressure Equipment Directive guidelines (PED) and CE	

* Not with protective cage
** Temperature dependent
*** Other O-ring material see technical document
Many housing options are available. Please use the product configurator and sensor fit guide found on p. 129.

Other Highlights

– Simple, yet highly durable
– Easy-to-use and low maintenance

Features Overview

– Models with sensor holder type "C" integrate with the Ingold safety socket to prevent injury or damage
– Many options for corrosion-resistant materials, O-rings, and process connections
– Surface finish N5/R_a 16 (excluding version with protective cage)

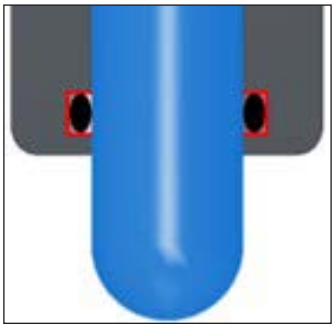
InFit 761 e
O-Ring Groove

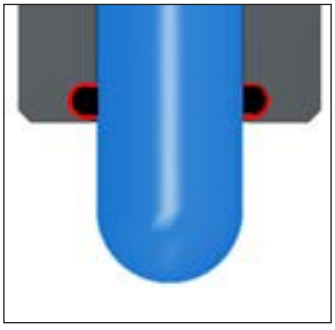
The InFit 761 e housings are available in mainly three different O-ring groove type configurations, consisting of the selected protective cage and sensor fitting:

- **NS / WS** Standard squared O-Ring groove with or without cage
- **NC** CIP round O-Ring groove without cage
- **WK** Standard squared O-Ring groove with NPT shaft and cage



Standard O-Ring groove

- Standard square style O-ring groove
- Non-hygienic design
- Available with or without protective cage
- Machined surface finish Ra > 0.4 µm / 15 µin



CIP O-Ring groove

- CIP round style O-ring groove
- Hygienic design for better sanitization control
- Available without protective cage only
- Electropolished surface when in 1.4435/316L
- Surface roughness Ra < 0.4 µm / 15 µin

Process Adaptions for Food & Beverage

With DIN 11851 DN40 and SMS 1147 DN38 and DN51 are new Process Adaptions available for InFit761. Together with InPro X1 EHEDG and 3A certifications are valid for InFit 761 with DIN11851 process adapters (use of Siersema special process sealing required).

InFit 762 e/763 e

The Solution for Top-Entry into Large Vessels

InFit 762 e InFit 763 e

USP Class VI

The InFit 762 e and InFit 763 e stationary housings are designed for top mount applications in larger vessels and reactors. An optional protective cage may be ordered separately. The static insertion housing InFit 762 e allows quick and easy installation of electrodes and sensors with Pg 13.5 thread. This allows the use of a large range of pH/redox electrodes with solid or gel-type reference electrolyte as well as sensors for measuring conductivity, turbidity, dissolved oxygen and CO_2. The static insertion housing InFit 763 e provides quick and easy integration of pressurized pH/redox electrodes with liquid and refillable reference electrolyte. The InFit 763 e (PVDF version) housing is specifically designed for applications where tank damage is of concern – especially glass-lined reactors. The InFit 763 e (PVDF version) housing connects to the process using a variety of available flanges; however, a PN16 (AISI 150) flange is specified most often. A protective cage protects the electrode against abrasive solids in the process medium. The InFit 763 e (PVDF version) is designed for use where stainless steel is unsuitable and/or if the reactor is lined with rubber or glass.

InFit 764 e

Problem Solver in Combination with Liquid-filled pH Electrodes

The InFit 764 e housings are specifically designed to maximize the performance and longevity of liquid-filled pH and redox sensors. The body of the housing can be pressurized to maintain a positive pressure differential between the sensor fill solution and the process. The positive differential eliminates sensor contamination by preventing process media from crossing the diaphragm into the sensor. A large inspection window makes it easy to monitor electrolyte level.

InFlow Series
Modular, Highly Adaptable Flow-Through Housings

InFlow 761

CE

InFlow 762

InFlow 751

InFlow 76X flow-through housings from METTLER TOLEDO are designed to enable safe and reliable mounting of the InTrac and InFit series sensor housings directly into the process or in a bypass (pipe). These rugged flow-through housings are specially suited to the requirements of the process industry and can be easily and safely installed, allowing reliable measurement procedures.
InFlow 751 flow-through housings serve for the direct fitting of METTLER TOLEDO electrodes and sensors for the measurement of pH, ORP, dissolved oxygen, conductivity and turbidity, particularly in the field of industrial wastewater treatment. The housings protect electrodes/sensors against mechanical damage.

425 mm	–	–	–	–	–	–	–	–	•

The InFit 761 e housing is a universal housing for use with pH, DO, CO_2, conductivity and turbidity sensors. When using glass electrodes, it is important not to expose too much glass beyond the end of the housing. This sensor fit guide is designed to assist you with selecting the proper glass pH sensor. Stainless steel sensors (DO, CO_2, cond, turb) are more rigid and may extend farther beyond the end of the housing, but it is not recommended. Other insertion lengths are available on request.

Seals

The InFlow 76X PVDF version with Ingold DN25 socket is fitted with a medium-wetted O-ring made of Viton®. O-ring sets made of EPDM and Kalrez® are available as accessories.

Important addition to the order information for InDip 550 housings

Flanges for the InDip 550 have to be ordered separately. They cannot be included to the part number of the housing. Local assembly of InDip housings is also possible. Ask your local METTLER TOLEDO representative.

Did You Know

Measurement loops from METTLER TOLEDO can be automated with the EasyClean systems for rinsing, cleaning and calibrating. See pages 140–145 for more information.

InTrac 776 e
For Liquid-Filled pH Electrodes

USP Class VI

FDA

CE

Ex

FM APPROVED

The retractable InTrac 776 e housings are designed for applications in processes which utilize pH/ORP sensors that have a liquid electrolyte reference system such as the InPro 2000 and Ingold 465 series electrodes. The housing has a built-in flushing chamber in which the electrode can be cleaned and calibrated if necessary, both accomplished without interruption of the process. This enhanced housing incorporates the Tri-Lock™ safety system which increases process safety and reliability even in harsh applications.

Specifications

Operation	Manual or pneumatic	
Ambient temperature	Polypropylene:	0 to 70 °C (32 to 158 °F)
	Stainless steel:	–10 to 70 °C (14 to 158 °F)
Functional pressure range	Manual:	0 to 5 bar (0 to 73 psig)
	Pneumatic:	0 to 6 bar (0 to 87 psig)
Max. permissible pressure	Polypropylene (PP):	6 bar at 20 °C (87 psig at 68 °F)
	PVDF, PEEK:	6 bar at 20 °C (87 psig at 68 °F)
	316 L stainless steel:	6 bar at 140 °C (87 psig at 276 °F)
	Hastelloy/Ti:	6 bar at 140 °C (87 psig at 276 °F)
Insertion lengths	70 mm, 100 mm, 200 mm (2.76", 3.94", 7.87")	
Wetted parts	316 L stainless steel, Hastelloy–C22, titanium, PP, PVDF, PEEK	
Wetted O-rings	Viton®-FDA, EPDM-FDA, Kalrez®-FDA-USP Class VI	
Housing length	70/100 mm:	545 mm (21.8") in process 710 mm (28") retracted from process
	200 mm:	645 mm (25.4") in process 1110 mm (43.7") retracted from process
Pneumatic conditions	4 to 8 bar (58 to 116 psig)	
Flushing connections (water, steam)	2 to 6 bar (29 to 87 psig)	
Position monitoring (options)	Pneumatic check (3/2 way valve), G1/8" Inductive check, non-Ex, M12 × 1 Inductive check, Ex, M12 × 1	
Certificates and Approvals	CE; Pressure Equipment Directive guidelines (PED); Certificate of conformity according to EN10204-2.1; Material certificate according to 3.1; ATEX, FM and MaxCert	

Did You Know
Measurement loops from METTLER TOLEDO can be automated with the EasyClean systems for rinsing, cleaning and calibrating. See pages 140–145 for more information.

InTrac 777e/779e
The Reliable All-Rounder

The retractable InTrac 777e/779e housings are specifically designed for applications in processes which utilize 12 mm pH, ORP, dissolved oxygen, CO_2, conductivity, and turbidity (InTrac 779e) sensors. The housing has a flushing chamber in which the electrode can be cleaned and calibrated if necessary, both accomplished without interruption of the process. This enhanced housing incorporates the Tri-Lock safety system which increases process safety and reliability even in harsh applications. Multiple process connections and materials of construction make the InTrac 777e/779e an excellent choice for use in either the chemical, biopharmaceutical or food and beverage industries.

Specifications

Operation	Manual or pneumatic (295 mm version pneumatic only)	
Ambient temperature	Polypropylene:	0 to 70 °C (32 to 158 °F)
	Stainless steel:	–10 to 70 °C (14 to 158 °F)
Functional pressure range	Manual:	0 to 5 bar (0 to 73 psig)
	Pneumatic:	0 to 16 bar (0 to 232 psig)
Max. permissible pressure	Polypropylene (PP):	6 bar/20 °C (87 psig/68 °F)
	PVDF, PEEK:	6 bar/20 °C (87 psig/68 °F)
	316L stainless steel:	16 bar/140 °C (232 psig/276 °F)
	Hastelloy/Ti:	16 bar/140 °C (232 psig/276 °F)
Insertion lengths	70 mm, 100 mm, 200 mm, 295 mm (2.76", 3.94", 7.87", 11.61")	
Wetted parts	316L stainless steel, Hastelloy-C22*, titanium, PP*, PVDF*, PEEK*, * not available for 295 mm version	
Wetted O-rings	Viton®-FDA, EPDM-FDA, Kalrez®-FDA and USP Class VI	
Housing length	70/100 mm:	360 mm (14.2") in process 515 mm (20.3") retracted from process
	200 mm:	460 mm (18.1") in process 915 mm (36") retracted from process
Pneumatic conditions	4 to 8 bar (58 to 116 psig)	
Flushing connections (water, steam)	2 to 6 bar (29 to 87 psig)	
Position monitoring (options)	Pneumatic check (3/2 way valve), G 1/8" Inductive check, non-Ex, M12 × 1 Inductive check, Ex, M12 × 1	
Certificates and Approvals	CE; Pressure Equipment Directive guidelines (PED); Certificate of conformity according to EN10204-2.1; Material certificate according to 3.1; ATEX, FM and MaxCert	

Many housing options are available. Please use the product configurator and sensor fit guide found on p. 137.

Features Overview
- Advanced Tri-Lock safety system
- Remove sensor without interrupting of the process
- Automation with EasyClean

Other Highlights
- Multiple process connections available
- For use with 12 mm Ingold sensors
- MaxCert covers necessary certifications
- Increased operational safety and reliability
- Several materials of construction available

InTrac 797 e/799 e

When Sterile Conditions Are Required

USP Class VI

FDA

CE

Ex

FM APPROVED

The retractable InTrac 797 e/799 e housings are specifically designed for applications in processes which utilize 12 mm pH, ORP, dissolved oxygen, CO_2, conductivity, and turbidity (InTrac 799 e) sensors. This sterilizable housing has a double flushing chamber which was designed to meet the highest demands of the pharmaceutical and food and beverage industries where sterile conditions are required. The double flushing chamber allows complete sterilization of the upper and lower sections of a sensor and insertion shaft allowing the electrode/sensor to be removed and replaced under a completely sterile environment.

Specifications

InTrac 781/784
Designed for the Toughest Process Conditions

InTrac 781 InTrac 784

The InTrac 781/784 retractable housings combine rugged design with great versatility to meet the demands of the harshest process conditions in chemical, petrochemical, pulp and paper, or utilities applications.
The InTrac 781 operates mainly with the 12 mm diameter (Pg 13.5) sensors, while the InTrac 784 operates with the InPro 2000 (i)/465 pH/ORP sensor.
The retractable housing material is specially designed for a range of harsh applications. Wetted parts are available in different materials (1.4404/SS 316L; Alloy C-22, PP; PVDF or PEEK), offering installation flexibility in many applications.
The intelligent sensor locking system in the housing enhances operational safety. Without the presence of a sensor, the housing cannot be inserted into the process. Also, it makes it possible to remove the sensor from the housing when in the service position.

Specifications

Operation	Manual or pneumatic or pneumatic with inductive check back
Ambient temperature	SS 316L, Alloy C-22: –10 to 70 °C (14 … 158 °F) PP, PVDF, PEEK: 0 to 70 °C (32 … 158 °F)
Max. permissible pressure and temperature	SS 316L, Alloy C-22: 16 bar/120 °C or 10 bar/140 °C (232 psi/248 °F or 145 psi/284 °F PP: 4 bar/60 °C or 2 bar/70 °C (58 psi/140 °F or 29 psi/158 °F) PVDF: 6 bar/90 °C or 4 bar/100 °C (87 psi/194 °F or 58 psi/212 °F) PEEK: 10 bar/100 °C or 6 bar/120 °C (145 psi/212 °F or 87 psi/248 °F)
Insertion length	80 mm (3.15") or 280 mm (11.02")
Wetted parts	SS 316L, Alloy C-22, PP, PVDF, PEEK or PVDF
Wetted O-rings	Viton®, Kalrez® or EPDM
Process connections	Flanges: DIN or AISI, or NPT 1¼"
Pneumatic condition	4 to 6 bar
Flushing condition (water)	1 to 6 bar
Certificates and Approvals	CE; Pressure Equipment Directive guideline (PED); ATEX and FM

Many housing options are available. Please use the product configurator found on p. 127.

Other Highlights

– Multiple process connections available
– Large choice of materials for wetted parts
– Variable insertion length
– Compliance with international standards
– Long life and easily exchangeable seals

Features Overview

– Highly efficient cleaning chamber
– Intelligent sensor locking system to prevent unintentional removal of the sensor
– Integrated sensor protective cage to protect the sensor in cases of fast process flow
– Specially designed drive train allows sensor retraction from high process pressures and temperatures
– Automated sensor cleaning with EasyClean

InTrac 785/787
For Harsh Applications

InTrac 785 InTrac 787

InTrac 785/787 is a rugged, retractable housing for the most demanding industrial applications. Sensor maintenance and replacement becomes a fast and easy task using the InTrac 785/787, and can be done without any interruption to your process. Once retracted, the integral ball valve completely seals off your process, preventing loss of medium or contamination. The design allows for direct mounting to process lines, tanks and reactor vessels.

The InTrac 785 allows a wide range of installation possibilities, thanks to the wide variety of process connections and materials for wetted parts. If the ball valve is already present or a factory standard needs to be used, this housing is also available without ball valve and process connection.

Automation

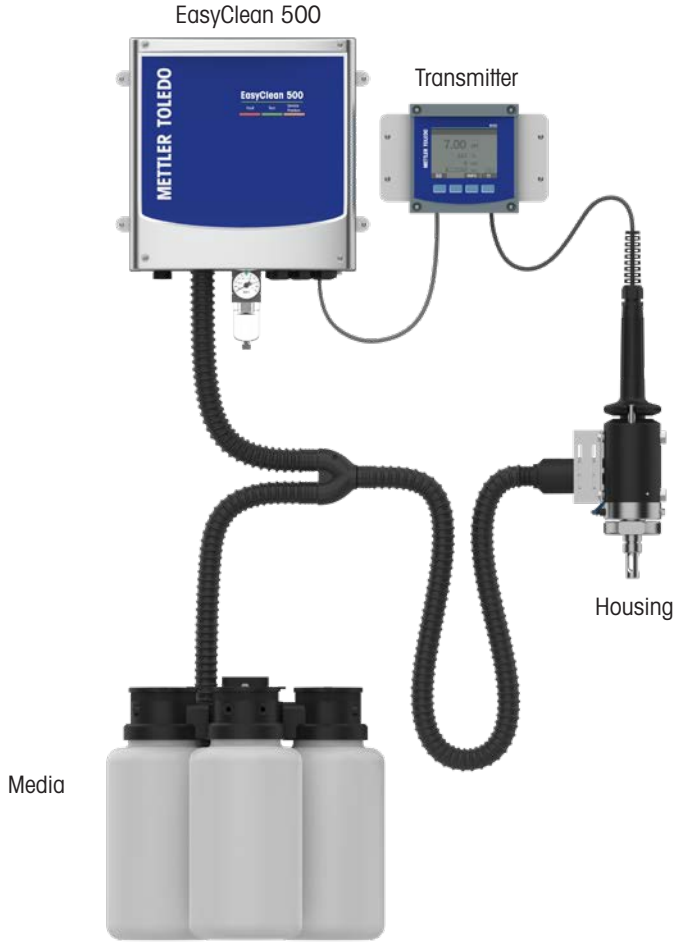
EasyClean
Process Reliability Through Targeted Automation

EasyClean systems are feature-rich and compact. Chemical processing, food processing, bio-pharmaceutical processes, and other industrial applications all benefit from EasyClean's ability to automate routine maintenance. Just choose the most appropriate Ingold sensor, housing, and transmitter for your process, then add an EasyClean system to give you the exact amount of automation you need.

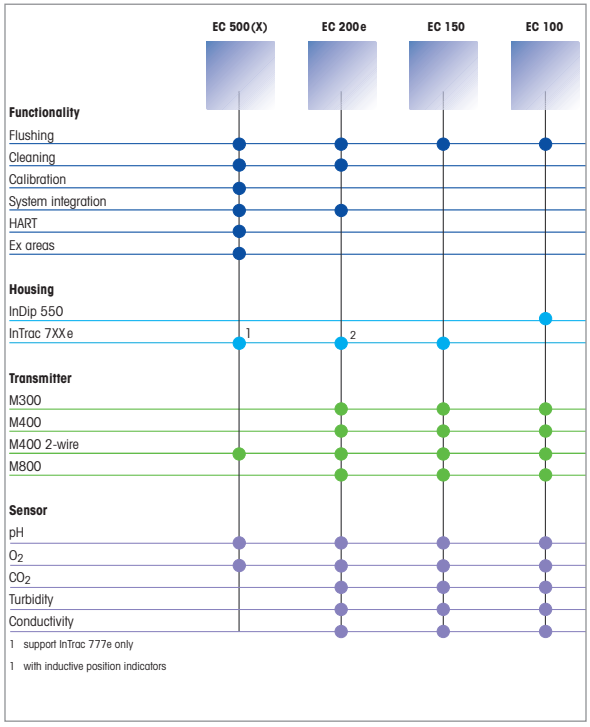
Flexibility of sensor maintenance
In conjunction with the METTLER TOLEDO Ingold transmitter line, sensor maintenance is fully automated. However, manual operation is also possible whenever required. An integrated controller identifies each ongoing working step, as well as any functional problems within the system.

Safety
EasyClean carries out continuous system diagnostics. In the event of any system anomaly the electrode remains inserted in the sample medium in order to ensure continued parameter measurement and prevent process interruption.

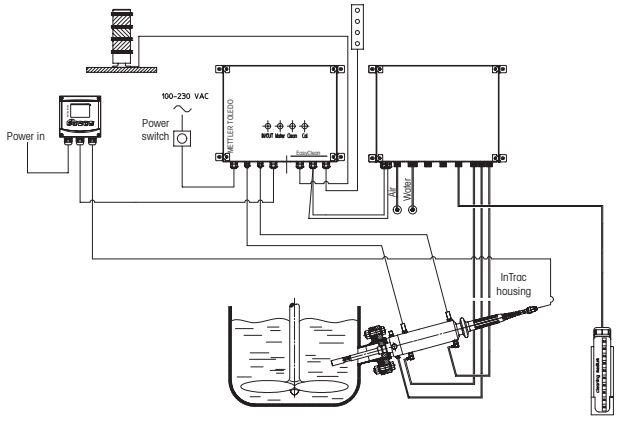
System overview EasyClean 500 (X)



EasyClean Configuration
Custom



This section will assist you with configuration based upon your specific requirements. The following example creates a fully automated EasyClean system for a "typical" industrial processing application. For harsh chemical environments, choose a compatible industrial sensor housing combination and an EasyClean system to give you the level of automation desired. The ordering information provided on p. 145 will help you choose the appropriate system components. Please make sure you choose one item from each of the sections marked with a ▲.



Schematic of a typical EasyClean custom installation

Configuring your EasyClean system (example)

Note: For full functionality, housings must have position sensors when used with an EasyClean 200e or 500 system.

Automation

EasyClean 500

Flexible, for the Highest Demands

EasyClean 500 is used for fully automatic cleaning and calibration of pH, ORP, and oxygen measuring points. In combination with the transmitter M400 2-wire and the InTrac 777 e retractable housing it provides a flexible system solution which can be implemented into either continuous or batch measurements.
EasyClean 500 is versatile in its application. It offers multiple control possibilities and can be programmed extensively. Furthermore, a version for applications in explosion hazardous areas is available. The connection to a supervisory process control system can easily be realized in a conventional way, via point-to-point or via HART.

Specifications

Protection	IP 65 / NEMA 4X
Power	12.5 ~ 30 V, power supply via safety barrier
Compressed air supply	4 – 10 bar (58 – 145 psi)
Flushing supply	2 – 6 bar (29 – 87 psi)
Pump	Delivery distance: 5 m / 16.4 ft (10 m (32.8 ft) optional) Suction height: 1.5 m / 4.9 ft

- **Completely unattended maintenance operation**
- **Allows maintenance teams to focus on more important and skill-intensive tasks**
- **Expanded operations without adding staff**
- **Ensured system performance and process control**

Features Overview

– Minimizes maintenance costs by fully automatic cleaning and calibration of the sensor
– Optimal adaptation to the process conditions thanks to diverse program runs with freely programmable sequences
– High flexibility thanks to free choice of individually programmable intervals or weekly programs
– EasyClean 500 ensures a safe application in explosion hazardous areas

www.mt.com/EC500

EasyClean 200 e

Fully Automated Rinsing and Cleaning

The EasyClean 200 e systems fully automate rinsing and cleaning procedures for the parameters pH, ORP, dissolved oxygen, CO_2, conductivity, and turbidity.
EasyClean 200 e does not feature a calibration option, but it greatly reduces maintenance requirements and improves performance.

Specifications

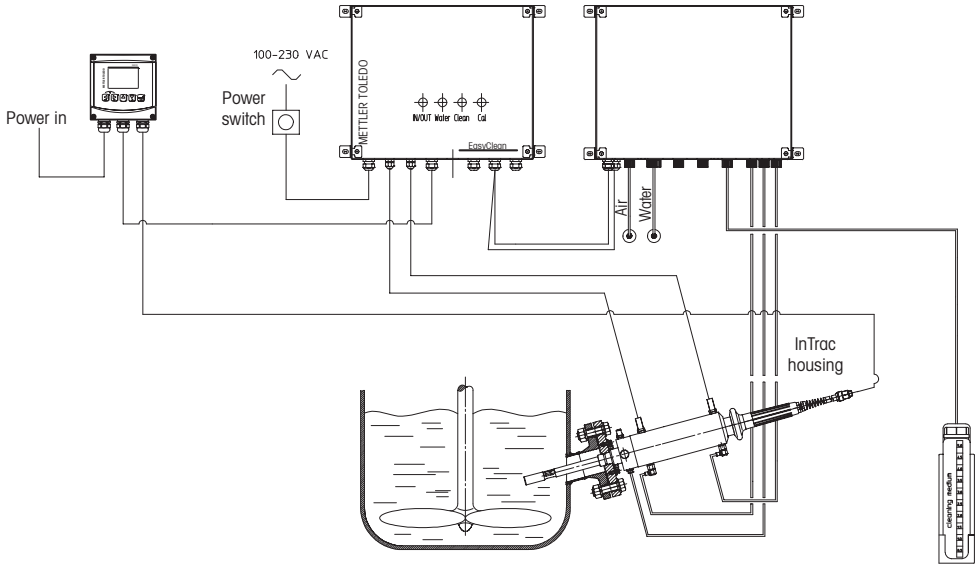
Protection	IP 65
Power	100 – 230 VAC 50 / 60 Hz 0.18 – 0.3 A
Compressed air supply	4 – 8 bar (58 – 116 psi)
Flushing supply	2 – 8 bar (29 – 116 psi)
Pump	Delivery distance: 10 m (32.8 ft) Suction height: 3 m (9.8 ft)

Features Overview

– Modular configuration provides many installation options
– Many accessories available for customized installation and operational requirements

Other Highlights

– Configured for immediate operation
– Easily customized for special requirements
– Manual operation override if desired
– Fully automated operation for pH, ORP, dissolved oxygen, CO_2, conductivity, and turbidity
– Optimal cleaning effect due to the adjustable residence time



Schematic of a typical EasyClean 200 e installation

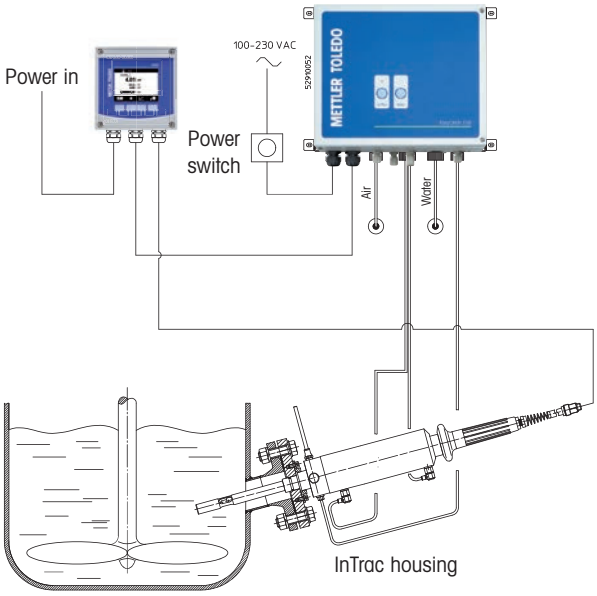
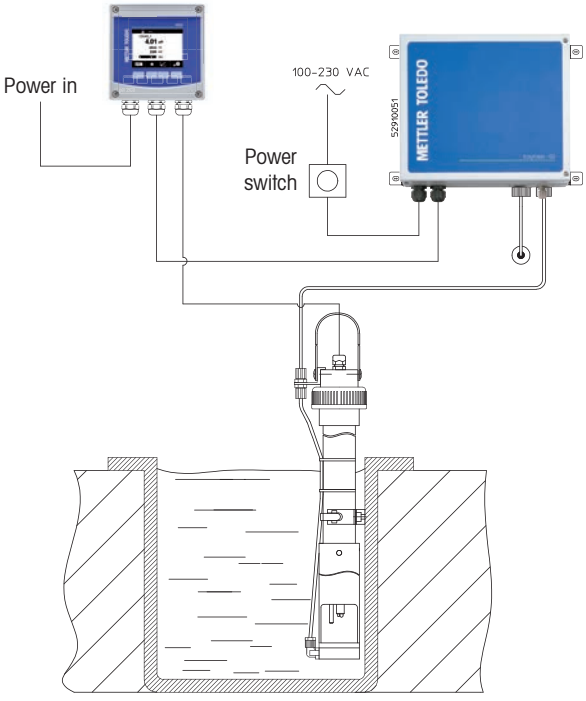
EasyClean 150/100
Automated Rinsing



Schematic of a typical EasyClean 150 installation



Schematic of a typical EasyClean 100 installation

The EasyClean 100 and 150 series are designed to provide completely automatic sensor rinsing. The EasyClean 100 system is designed to be used with a stationary InDip housing with a spray-head for open tank and basin applications. The EasyClean 100 can use either water rinsing or compressed air to create turbulence to prevent stubborn build-up. The EasyClean 150 works in conjunction with a retractable housing to withdraw the electrode from the process prior to automatic water rinsing.

Specifications

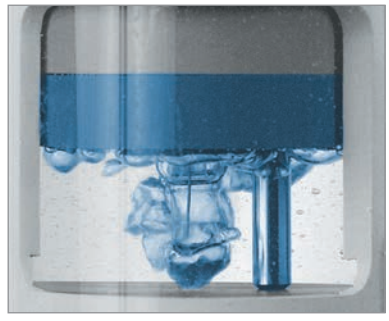
Protection	IP 65
Power	100 – 230 VAC 50 / 60 Hz 0.18 – 0.3 A
Compressed air supply	4 – 8 bar (58 – 116 psig) (EasyClean 150)
Flushing supply	2 – 6 bar (29 – 87 psig)

Features Overview

– Modular design allows complete flexibility
– Universal components for easy serviceability
– Entry-level – moderate fouling environments

Other Highlights

– Simple design and fast setup
– Standard program for immediate operation
– Manual operation override if desired



EasyClean 100 cleaning action. The bubble formation centered beneath the sensor guarantees gentle cleaning.

Cables and Connections
Sensor Heads/Cable Sockets

Interconnection cables from the sensor to the transmitter play an important role in providing reliable process measurements. In addition to carrying the particular parameter signal, in some cases temperature, solution ground and supply voltages are also required. Internal cable shielding and appropriate cable connectors assure noise-free, reliable signal transfer. A wide variety of cables is available to meet the specific installation requirement. Below is a listing of common cables. The sensor head connection is shown below in the left column with the corresponding cable connection shown directly to the right.
Available sensor / cable adapters are listed on p. 135.
Contact METTLER TOLEDO for additional configurations and custom application requirements.

Sensor Heads	Adapters (see next page)	Cable Sockets	Parameter
S7		AS9	pH/redox
S8 (with Pg 13.5)		AS9	pH/redox
K8S (with Pg 13.5 autoclavable)		AK9	pH/redox
ISM: K8S		AK9	pH/redox/DO
K9 (autoclavable)		AK9	pH/redox
VP6/VP8 sensor head		VP6/VP8 cable socket	pH/redox/DO/ CO_2/Cond
O_2 flange plug type T-82		O_2 cable socket T-82	DO

Did You Know
The VP cable blind plug keeps the cable socket dry when the sensor is removed for service.

Cable Terminations

Custom Cable Plugs to Transmitter or Appliances

Note: Standard cables are delivered with one end open for transmitter connection. On request, cable plugs can be ordered for different appliances.

The most commonly used plugs are shown below. Ask for other types from your METTLER TOLEDO representative.

Applications		Parameter
Appliance coupler DIN 15.50D Coaxial plug (DIN 19262) for 5 mm cable		pH/redox
Appliance coupler BNC–50 Coaxial plug for 5 mm cable		pH/redox
Coax connector for gas- and watertight connection of 2 coaxial 5 mm cables		pH/redox
Cable coupler SK9 for lengthening of AS9 5 mm cable		pH/redox
VP plug		pH/redox/DO/CO_2
VP blind plug		pH/redox/DO/CO_2
VP apparatus plug Connection as flange or bulkhead		pH/redox/DO/CO_2

Cable/Sensor Adapters and Cable Plugs

Gas Analytics Measurement Solutions

for Industrial Applications

Gas Analyzers
Measure Where It Really Matters

Monitoring and controlling the level of harmful or explosive gases in your process is key to ensuring the safety of the environment, people, assets and increasing process efficiency. METTLER TOLEDO's unique range of gas analysis solutions gives you the power to decide where to measure, everywhere it matters.

Based on long-standing field experience in analytical solutions for liquid measurement, METTLER TOLEDO has developed systems for gas analysis that offer:

– **In situ and in-line capability**: our systems are built to measure, right there where you need to measure
– **Low cost of ownership**: outstanding measurement performance without the drawback of heavy maintenance
– **Ruggedness and long-term stability** for continuous use in the harshest environments.

The best technology for the job

METTLER TOLEDO's choice of technologies for gas measurement all feature the ability to measure in situ, without the need for gas sampling or conditioning.

– GPro® 500 **Tunable Diode Laser (TDL)** analyzers provide the highest level of reliability and fastest response time in process control and safety applications.
– Membrane covered InPro **amperometric oxygen sensors** are largely insensitive to moisture and dust: they are ideally suited for inerting and blanketing applications.

TDL: Laser-sharp view into your process

With TDL absorption spectroscopy, a diode laser with a highly specific and extremely narrow emission wavelength is used to resolve single absorption lines of the gas species to be measured. The absorption lines are carefully selected to avoid cross-interference from other background gases. Using direct absorption spectroscopy, a spectrum is taken and compared with spectral reference data stored in the onboard database for any given temperature and pressure. The concentration of the gas is then calculated, and any inconsistency between reference data and measurement will trigger an alarm.

Process adaptions that fit anywhere

Many users want to reap the benefits of interference-free, drift-free TDL technology for better process control and lower maintenance costs. However, for reliable measurement with a TDL, necessary framework conditions such as minimum optical path length, availability of purge gas supply, or high dust load in a process can sometimes get in the way. Acknowledging these constraints, METTLER TOLEDO has developed specific adaption solutions to substantially increase the coverage of possible TDL applications.

The new wafer-type adaption allows cross-section installation down to DN50 (2") pipes with no flow restriction and minimum pipe work required. Further, static process gas conditions are not an obstacle to the GPro 500 with the availability of the new process purge-free probe for inertization and blanketing applications. Finally, the filter probe is ideal for measurement in high-dust applications where cross-stack-type TDLs typically fail due to the loss of signal intensity.

New gases, new opportunities for process and combustion applications:

Oxygen:
– Blanketing and inertization
– Combustion control
– Reformers
– Chlorination
– Flare stacks
– Thermal oxidizer
– Vapor recovery
– Formaldehyde

CO:
– Combustion
– ESP filter
– CO boiler
– FCC units

CO_2:
– FCC units
– Ethylene oxide (EO)
– Ethylene
– PTA plant
– Syngas
– Ammonia
– Fired heaters
– Process heaters
– Carbon black
– Ethylene
– Hydrogen production

CH_4:
– Syn gas

CO/CH_4:
– Combustion

H_2O:
– Chlorine gas
– H_2 reformer gas
– Tower dryer exhaust

H_2S:
– Sulfur recovery

NH_3:
– Ammonia slip

HCl:
– Stack monitoring

Comparison of Oxygen Measurement Technologies

Selection Criteria to Help You Choose the Right Tool

There is no single measurement technology that will work for every application. METTLER TOLEDO is dedicated to identifying and offering the best technologies for robust in process gas measurements. For making oxygen measurements, we have two technologies. The following is a general guideline for selecting the best technology. To make the final determination, please contact your local METTLER TOLEDO representative.

Oxygen measurement across the process industries

From preventing the build-up of explosive gas mixtures in chemical processes, to nitrogen blanketing for inhibiting product oxidation, to ensuring carbon dioxide purity in the Food and Beverage industry, measurement of oxygen is a vital element of many industrial processes.

Amperometric

This is an electro-chemical measurement technology housed in a compact package. It is a depleting technology, some maintenance and consumables is required. Chemical interferences are possible; knowledge of the gas composition is required for evaluation.
For more information on this technique, refer to the Measurement Theory section of this catalog.

Tunable Diode Laser (TDL)

METTLER TOLEDO's TDL technology is immune to most interferences and the sensor's materials of construction are quite robust. There is no regular maintenance and the sensor is designed for long term continuous operation while being virtually drift free. TDL is suited for the most challenging and critical applications. The physical package is a bit larger than the amperometric and optical sensors. For more information on this technique, refer to the Measurement Theory section of this catalog.

	Amperometric	TDL Oxygen
Applications	Inerting & Blanketing	Process Control, Safety & Combustion
Flow required	No, great for tank inerting	Certain applications require flow
Range	5-50,000 ppm or 50 ppm to 60%	0.01–100%
Max temperature	70 °C (158 °F)	600 °C (1112 °F)
Low pressure	–0.81 bar (–11.8 psig)	–0.9 bar (–13.05 psig)
High pressure	+7.95 bar (115.3 psig)	+9 bar (130.53 psig)
N_2 purging required	No	Sometimes
Maintenance, consumables	Required	No
Capital	$	$$$
Probe size	Very small, for confined spaces	Larger, for pipes 2" dia. or larger
Hazardous area technique	Intrinsic safety	Explosion proof
Background gas interference	Susceptible to some	None
SIL	No	SIL2 compatible version available
ATEX/FM Approved	Yes	Yes

TDL Gas Analyzers

For Every Installation Location in Your Plant

	Standard Purged	Wafer	Non-Purge	Non-Purged with filter and Blow-back	Extractive	Cross-Pipe
Optical Path Interface	Insertion probe	Flow thru. Body is part of pipeline system	Insertion probe	Insertion probe	Extractive cell	Full diameter
Min Flow Requirement	Yes	Yes	No	Yes	No	Yes
Process Interface/Size	Mounts in pipe 4" diameter or larger	2", 150 lb ANSI or 3", 150 lb ANSI or 4", 150 lb ANSI	Mounts in pipe 4" diameter or larger	Mounts in pipe 4" diameter or larger	N/A	Pipes 1–3 m diameter
Typical Application	Near saturated gas stream e.g. combined gas vent line to destruct unit	Near saturated gas stream e.g. dryer, solvent, vapor recovery	Clean dry gases e.g. Storage tank safety blanket	Dry gases with particulate e.g. Flue gases	Clean dry gases from customer's extractive gas sampling system e.g. marine vapor recovery	Hot, flue gases, e.g. ammonia slip/ducts, and stacks

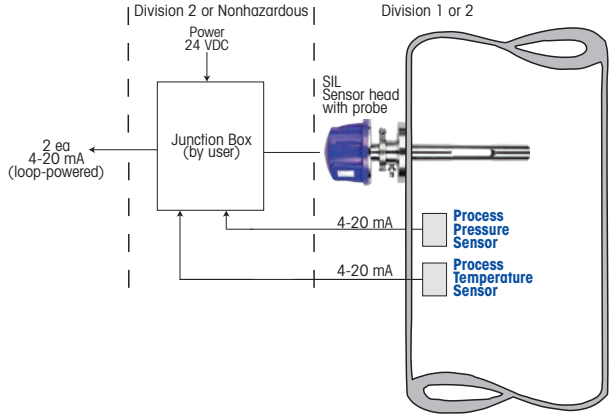
Direct analog out version



GPro 500 TDL
Building Your Measurement System

Selection of Components
For proper operation and optimal performance in your process, each element of your measurement system must be carefully chosen. A complete measurement system requires components including a sensor, junction box, cable and transmitter.

Sensor Selection
METTLER TOLEDO sensors are high performance and long lasting. However, proper selection must be made according to the application and process environment to which it will be exposed.

Basic selection considerations are:
– Gas to be measured
– Measurement range
– Operating temperature/pressure range
– Alarm level
– Accuracy required
– Background gases & concentrations
– Ambient temperature
– Contaminants (particulates, oils, condensate, aerosols)
– Piping/vessel sizes
– Gas stream velocity
– Dust and particle content

The sensor is made up of two significant pieces, as discussed below:

1a. Sensor-Spectrometer Portion (head)
Once it has been determined that we can successfully make the desired measurement, selection of correct head is relatively simple
Choices include:
– Gas to be measured (presently O_2, CO, CO_2, HCl, H_2S, CH_4 CO/CH_4, CH_4, NH_3 and H_2O vapor)
– Safety approval type (FM or ATEX)
– Requirement for SIL2

1b. Sensor – Process Adaption Portion
Upon detailed review of the process conditions and using our many years of experience, we select the best style adaption for the application and the appropriate size.

This is a brief summary of the process adaption styles (each available in various sizes):
– Purged probe
– Non-purged probe
– Non-purged probe with filter and optional blowback
– Wafer
– Extractive
– White cell

In addition to the sensor style and size, other decisions include:
– Seal material (Kalrez® types or graphite)
– Optic material (borosilicate glass, quartz or sapphire)
– Wall thickness (to accommodate wall insulation)
– Process connection size
– Material of construction: 316L stainless steel and C22 Hastelloy are standard; others are available on request.

2. Transmitter Selection
Transmitters are the component that communicates a sensor's readings into displayed measurements. The transmitter also transfers the data to the process control system.

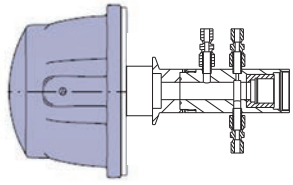
Most users want the convenience of having a local display, multiple analog inputs/outputs and alarms. For these users we select the model M400, Type 3 transmitter. This 4 wire transmitter is ATEX/FM approved for Zone/Division 2 areas, is suitable for indoor or outdoor use and can be powered from AC or DC.

If your site requires a SIL version of the GPro 500, that version does not utilize the separate (M400) transmitter. The SIL version of the GPro 500 has a simple transmitter built into the sensor's head. It does not have the functionality of the M400, it simply has 2 analog (4–20mA) signal outputs (loop powered).

3. Junction Box
The multi-core cable that connects on one end to the GPro 500 head terminates the other end at a junction box that houses a 16 position terminal strip. METTLER TOLEDO offers a junction box or users can provide their own junction box. The junction box needs to be rated for the area where it will be installed.

4. Cable
A multi-core cable is used to connect the GPro 500 head to the junction box. Note: on the FM unit, the cable is shipped loose, the ATEX unit has the cable pre-terminated in the sensor's head.

5. Verification Cell
Although not part of the GPro 500, a verification cell is a useful tool to verify calibration and for troubleshooting.



To use the cell, remove the sensor head from the probe and connect the cell to the head using the Tri-Clamp and special gasket. One verification cell can be used for multiple units on the same site. Ambient air can be used as a check gas for the oxygen sensor. To introduce other gases, the cell has inlet and outlet fittings.

6. Diagnostic Software
The MT TDL Suite is PC software with a variety of functions to see into and capture information about the operation of your GPro 500. It is not mandatory to ever use this software but most users find it a powerful tool. The software suite will automatically detect the gas that your unit is designed to measure and will display it appropriately.

7. Thermal Barrier
If the process gas is expected to be at a temperature between 250 °C to 600 °C, a thermal barrier can be used to protect the sensor's electronics. The thermal barrier is effectively a spool piece mounted between the sensor and the sensor head.

GPro 500 Sensor

In Situ Sensor Convenience, with the Power of an Analyzer

Tunable Diode Laser (TDL) measurement technology is recognized for speed and accuracy of measurement, and immunity to background gases. To this, METTLER TOLEDO has added the simplicity of use and low maintenance of in-line sensor design, plus advanced predictive diagnostics. The result is the GPro 500 series, a highly durable line of oxygen sensors for process and safety applications in chemical plant and petrochemical operations.

Specifications

Measurement O_2	
Effective path length	Probes: 200, 400, 800 mm (7.87", 15.75", 31.49") Wafer: 50, 80, 100 mm (1.96", 3.15", 3.94") Extractive cells: 200, 400, 800 mm, 1 m, (7.87", 15.75", 31.49", 39.37")
Lower detection limit (in 1 meter path length at ambient standard conditions, dry gas, no dust load, in N_2 background)	100 ppm-v
Measurement range	0–100 %
Accuracy	2 % of reading or 100 ppm O_2, whichever is greater
Linearity	Better than 1 %
Resolution	<0 … 0.01 % vol O_2 (100 ppm-v)
Drift	Negligible (<2% of measurement range between maintenance intervals)
Sampling rate	1 second
Response time (T_{90})	O_2 in N_2 21 % >0 % in <2 sec
Warm up time	Typically <1 minute
Repeatability	±0.25% of reading or 0.05 % O_2 (whichever is greater)
Process pressure range	0.1 bar–10 bar (abs)*/1.45 psi–145.03 psi (abs)
Process temperature range	0–250 °C (32–482 °F) Optional (for probe installation) 0–600 °C (0–1112 °F) with additional thermal barrier

* firmware 6.23 or higher

Features Overview

- One-flange installation without alignment
- In situ measurement without sampling system
- Low cost-of-ownership with virtually no maintenance
- Low purge gas consumption for minimum operating costs
- Large choice of process interface options

Did You Know

Tunable Diode Laser spectrometers are insensitive to background interference from the process gas and moisture, and are largely resistant to heavy dust loads.

InPro 6000 G Sensor Series

Oxygen Control for Your Gas Applications

The InPro 6000 G O_2 sensor series for gas measurement provides high operational availability together with excellent measurement performance. Without the need for expensive gas sample conditioning, the sensor can be installed directly in the process, and sensor maintenance or replacement can be performed without process interruption. METTLER TOLEDO offers a unique easy-to-use and reliable solution for challenging applications like N_2 blanketing, inertization and off-gas monitoring in Ex or non-Ex applications.

Specifications

Performance		
Operating range	InPro 6800 G/6850 iG:	0.1 Vol-% O_2 to 100 Vol-% O_2

Intelligent Sensor Management (ISM)
InPro 6000 iG sensors with integrated ISM functionality allow Plug and Measure and advanced diagnostics. ISM simplifies the installation, handling and maintenance of measurement equipment. For more information see ISM introduction pages 10–11.

Features Overview

- True in-line measurement without gas sampling system
- Long lasting and easy to maintain membranes
- Certified for hazardous gaseous and dust areas
- Oxygen measurement is not affected by water, water vapors or most organic solvents

Other Highlights

- Membrane covered amperometric measurement technology allows direct in-line installations
- Sensor can easily be calibrated in air. Costly calibration gases are eliminated

Process Analytics Measurement Solutions

for Industrial and Pure Water Applications

Conductivity/Resistivity Systems
When Optimal Performance Is Essential

Electrolytic conductivity is a widely used analytical parameter for water purity analysis, monitoring of reverse osmosis, cleaning procedures, control of chemical processes, and in industrial wastewater.

Three commonly used techniques
Electrolytic conductivity is a measure of the total ionic content of a solution. There are three main methodologies to measure conductivity:
- 2-electrode sensors are for measurements in high purity water and relatively low conductivity ranges
- 4-electrode sensors are for mid to high ranges. They are more resistant to fouling than 2-electrode designs
- Inductive sensors cover mid to very high conductivity ranges, and are particularly resistant to fouling.

METTLER TOLEDO offers all three methodologies.

2-electrode sensor design
An AC voltage is applied across the two electrodes, and the resistance between them is measured. The built-in temperature sensor provides fast accurate measurement. The cell geometry and the high solution resistance allow for very accurate and precise conductivity determination.

Sensors are used for water conditioning and purification stages where they are capable of detecting minute levels of impurities in ultrapure water.

4-electrode sensor design
An AC voltage is applied across the two outside electrodes. The principle is to measure the voltage drop across the two inner electrodes. Therefore, polarization errors are eliminated. Since this technique measures potential drop, the measurement remains accurate. It permits easier in-line cleaning and it can be installed in smaller piping than inductive sensors.

These sensors are used for concentration measurement of acids, alkalis, and salt process streams.

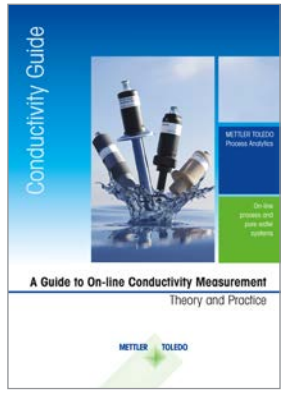
UniCond® Conductivity/Resistivity Sensors with ISM

The UniCond conductivity/resistivity sensor advancement integrates the measuring circuit and the physical sensor into a single unit. UniCond conductivity/resistivity sensors provide exceptionally wide measurement ranges due to their advanced built-in measuring circuit. The on-board measuring circuit eliminates interference from lead wire resistance and capacitance. Only digital signals go back to the transmitter. The UniCond design mitigates the effects of polarization, enabling the upper range of the conductivity sensor to be greatly expanded. UniCond 2-electrode sensors provide the ability to accurately measure from ultrapure water to brackish water (up to 50,000 µS/cm) with a single integrated sensor, greatly simplifying water treatment instrumentation. UniCond 4-electrode sensors measure up to 1 S/cm.

Inductive Sensors
(see page 78, 86–87)

Continuous conductivity monitoring of pharmaceutical waters

USP guideline <645> sets a standard for the quality assessment of USP waters based on measurement of the electrolytic conductivity. There is a 3-stage test in which stage 1 allows on-line, non-temperature compensated conductivity measurement. There are specific requirements for the sensors and transmitters (see table below). Thornton instruments fulfill all these and other pharmacopeia requirements. In addition, Thornton instruments provide USP and EP setpoints for convenience.



Find out more in our comprehensive conductivity theory guide at **www.mt.com/conductivity-guide**

Specification	USP <645>
Conductivity sensor and cell constant accuracy	Verify cell constant within ±2 % using a reference solution
Resistance measurement circuit	NIST traceable 0.1 % precision resistors in place of sensor
Instrument resolution	0.1 µS/cm
Instrument accuracy at 1.3 µS/cm	0.1 µS/cm
Temperature compensation	Must be read uncompensated
Instrument dynamic range	10^2

METTLER TOLEDO instruments meet USP <645> and other pharmacopeia water conductivity requirements

UniCond Conductivity/Resistivity Sensors with ISM

Certified Calibration for Compliance

ISM

UniCond conductivity/resistivity sensors provide exceptionally wide measurement ranges due to their advanced built-in measuring circuit. The on-board measuring circuit eliminates interference from leadwire resistance and capacitance. Only digital signals go back to the transmitter. Advanced measuring techniques further contribute to superior accuracy over the expanded range. ISM technology features pre-calibration Plug and Measure capabilities for fast, compliant start-up.

Specifications

Accuracy	0.01 cm^{-1} sensor: ±1 % 0.1 cm^{-1} sensors: ±1 % for 0.02–5,000 µS/cm; ±3 % > 5,000 µS/cm 4-E sensors: ±4 %
Repeatability	±0.25 %; ±2 % for 4-E sensors
Temperature sensor	Pt 1000 RTD, IEC 60751, Class A, with NIST-traceable calibration
Temperature accuracy	±0.1 °C at 25 °C; ±0.5 °C for 4-E sensors
Maximum cable length	91 m (300 ft)
Finish (Sanitary 0.1 cm^{-1} sensors)	Ra 0.2 micrometers (8 microinches), 316 L SS is electropolished
Insulator material	PEEK except for the CPVC sensors
Response time	90 % of value in < 5 s
Connector	IP 65, mates with 58 080 27X series cable

Features Overview

- Plug and Measure functionality
- Integral high-performance measuring circuit
- Robust digital output signal
- Calibration data stored internally
- Measuring circuit and system calibration can be performed in-line
- Simple compliance

Other Highlights

- Extremely wide rangeability: ultrapure to sea water
- Highest accuracy
- NPT and Tri-Clamp connections

UPW UniCond Sensor

Precise UPW Resistivity Measurement

ISM

The UPW UniCond™ sensor provides industry leading accuracy and an order of magnitude improvement in measurement stability, surpassing the standard currently set by other resistivity sensors in the SEMI industry. With the sensitivity to truly separate contamination from noise, the UPW UniCond sensor ensures measurement accuracy in even the most challenging semiconductor UPW applications with extremely high resistivity.

Specifications

Accuracy	0.1 cm^{-1} sensors: ± 0.5% for 10-20 MΩ -cm
Stability	0.003 MΩ-cm standard variation typical after rinse-up
Temperature sensor	Pt 1000 RTD, IEC 60751, Class A, with NIST-traceable calibration
Temperature accuracy	± 0.05 °C at 25 °C
Maximum cable length	91 m (300 ft)
Finish (Sanitary 0.1 cm^{-1} sensors)	Ra 0.38 micrometers (8 microinches)
Response time	90% of value in <5s
Insulator material	PEEK
Connector	IP65, mates with 58 080 27X series cable

Features Overview

– The UPW UniCond sensor offers unequalled temperature compensated resistivity accuracy to provide the clearest possible picture of your water quality.
– Enhanced METTLER TOLEDO Thornton resistivity measurement technology reduces signal noise from the UPW UniCond by 10× over other sensors in UPW.
– Robust construction and temperature compensation ensures that observed changes in resistivity are due to water quality and not environmental factors.
– Identification, calibration and maintenance data is stored in the UPW UniCond sensor, which allows for easy traceability. The sensor meets strict NIST-traceable calibration requirements.

Analog Conductivity Sensors

A Comprehensive Series to Meet Industry Requirements

METTLER TOLEDO Thornton provides a full complement of analog conductivity/resistivity sensors with NPT or sanitary fittings. They include various lengths, cell constants and materials to match the application: titanium concentric electrodes for high purity water; monel electrodes for rinse waters containing HF; highly polished 316L stainless steel (SS) electrodes for pharmaceutical waters; CPVC and PEEK sensors with four flush electrodes for solutions with higher conductivity and/or suspended material.

Specifications

Cell constant accuracy	±1 %, except ±5 % system accuracy for 4-electrode & 10 constant
Cell constant repeatability	±0.25 %, except ±2 % for 4-electrode & 10 constant
Temperature sensor	Pt1000 RTD, IEC 60751, Class A
Temperature accuracy	±0.1 °C (±0.2 °F) at 25 °C (77 °F), except ±0.5 °C (±0.9 °F) for 4-electrode sensors
Cable jacket material	NPT: PVC, 80 °C (176 °F) rating Sanitary: PTFE, 200 °C (392 °F) rating
Max. sensor distance	60 m (200 ft), except 15 m (50 ft) for 244-Series
Finish, sanitary 0.1 cm^{-1} sensors	R_a < 0.2 µm/R_a < 8 µin, 316L SS is electropolished
Insulator material	PEEK (0.01 & 0.1 constant); Noryl (10 constant)

Features Overview

– Precise factory calibration and certification of each cell constant and RTD
– Optimized 4-wire measuring circuitry provides exceptional rangeability and accuracy, eliminating cable effects
– Quick and easy installation

Typical Applications

– Pharmaceutical water
– Power and steam generation
– Semiconductor water treatment
– Recycle and reclaim water
– Wastewater treatment

For detailed information about conductivity sensors for M300:
Please refer to pages 173–174 for ordering information and drawings

Sensor Selection Criteria

Thornton offers a wide variety of conductivity/resistivity sensors to accommodate most applications. Use the following criteria to select the appropriate sensor for your installation:

– Conductivity or resistivity range
– Transmitter
– Mounting type: insertion, retractable or submersion
– Pipe connection and size
– Chemical compatibility, including cleaning and disinfection processes
– Temperature requirements, including steam and/or hot chemical cleaning

Calibration of Conductivity Sensors

Thornton Auto-loop Factory Calibration System

Thornton conductivity sensors are industry standards for determining water purity and solution concentration. Thornton ISO 9001 factory calibration and certification are NIST and ASTM traceable using Thornton's unique ultrapure auto-loop calibration system. Certification includes test and accuracy, plus materials as noted in sensor specifications.

USP pharmaceutical water monitoring requirements are met with sanitary sensors which provide accurate conductivity and temperature measurement. 316L stainless steel Tri-Clamp mounting sensors have an electropolished finish with roughness average (R_a) < 0.2 µm, < 8 µin.

4-electrode sensors are ideal for monitoring high conductivity applications, clean-in-place (CIP) solutions and deionizer regenerant concentrations.

Did You Know

Thornton conductivity systems are routinely used by other instrument suppliers as the reference to provide traceability when calibrating their instrumentation.

Conductivity Standard Solutions

Provided for sensor verification and recalibration, conductivity standards are produced, analyzed and documented in the METTLER TOLEDO Thornton ISO 9001 certified facility with processes similar to those used to calibrate high accuracy Thornton conductivity sensors. They are provided with label and certificate with lot number, certified value, expiration date, plus ASTM and NIST traceability data. These standards are analyzed and used at equilibrium with the atmosphere.

pH and ORP Systems
Reliable in Pure Water Treatment Applications

With many decades of experience in designing pH/ORP electrodes METTLER TOLEDO offers a state-of-the-art solution for practically any type of process analytical application.

Functional definition

pH can be described as a measurement of the relative acidity of a solution. Oxidation reduction potential (ORP) as measured with an ORP electrode, provides an indication of the oxidative state of the solution. It is important to measure, and often to control the pH and/or ORP of a solution for several reasons:

- To produce products with consistent well defined properties
- To efficiently produce products at optimal cost
- To avoid health risks
- To protect the environment
- To prevent physical/chemical damage to materials
- To meet regulatory requirements
- To expand scientific knowledge

The accurate measurement of pH/ORP is critical in most industries. Each application has unique physical requirements of chemical, temperature, and pressure resistance and possibly hygienic design. Another factor is what is to be done with the measurement: monitoring only, data logging or process control.

pH electrode selection

It is important to understand the details of the application before selecting a pH electrode. The table on the next page gives an initial glance at the various electrodes available and typical applications. Selection of a pH electrode requires a thorough knowledge of the process. Once the requirements are known, comparison of the electrode specifications detailed in this catalog will identify the appropriate sensor.

For Retractable Housing

4260 i/SG-120

3250 i/SG-120

ISM

METTLER TOLEDO Thornton offers pH and ORP sensors designed specifically for water treatment. The inclusion of ISM technology allows Plug and Measure capabilities, easier maintenance and convenient calibration. A variety of housings ensure a wide range of installation requirements can be met. The solution ground feature enables ORP measurement and ISM sensor diagnostics, and prevents measurement errors due to ground potentials.

Specifications

General	
Measuring electrode	Glass pH, platinum ORP/solution ground
Reference electrode	Silver-silver chloride with double junction or equivalent
Temperature compensator	NTC included in all sensors
pH range	0 – 14 pH, except InPro 4010 which is 2 – 12 pH
Maximum flow	3 m/s (10 ft/s)
Max. cable lengths	80 m (262.4 ft)

For electrode ratings see table "Ordering Information" on the next page.
For housings see pages 172 – 173.

Features Overview

– Convenient electrical and process connections for easy maintenance and calibration
– Advanced METTLER TOLEDO sensor technology for high performance and long life
– Integral temperature sensing for accurate measurement and compensation
– On-line pH sensor diagnostics for assurance of process surveillance

Typical Applications

– Wastewater neutralization
– Pharmaceutical water treatment
– Power and steam generation cycle chemistry and scrubbers
– Semiconductor ultrapure water treatment

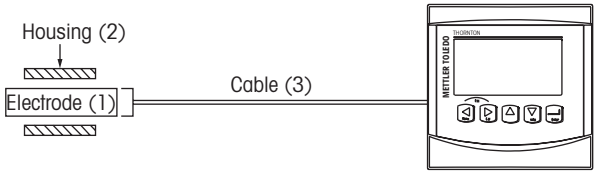
* For use with moderately pure waters (conductivity 5 to 50 µS/cm) use 53 300 021 housing in ¾" NPT(M) earth-grounded metal pipe tee with flow < 100 ml/min and discharge to open drain. For higher purity and/or higher accuracy in pure water see pHure Sensor, page 180–183.
* All new installations require an electrode, housing and cable.



A complete pH or ORP installation requires an electrode (1), a housing (2) and a VP or AS9 cable (3). For suitable housings consult the table on page 200. For suitable cables see table pages 148–149 for analog or page 233 for ISM installations. Each installation requires a transmitter.

For pH/ORP sensors recommended services, see page 183.

pHure Sensor with ISM

Reliable pH Measurement in Pure Waters

The METTLER TOLEDO Thornton pHure Sensor® uses a special internally-pressurized gel electrolyte reference electrode to produce results similar to a flowing junction but with much more convenient installation and maintenance. The electrode also includes a low resistance pH glass membrane, an integral, fast-responding RTD, and AK9 connection. All components of the pHure Sensor have been optimized for performance and value and conform to ASTM Standard D5128. The inclusion of ISM technology allows Plug and Measure capabilities, easier maintenance and convenient calibration. Various lengths of cable can be selected to provide flexibility in locating the sensor.

Specifications

Wetted materials	pH Glass
Process connections	¼" NPT(F) in/out
Flow housing volume	5 ml with electrode in place
Maximum pressure	Atmospheric pressure for optimum stability; operational 0 to 2.5 bar(g) (0 to 35 psig); can safely withstand 7 bar(g) (100 psig)
Sample temperature	0 to 80 °C (32 to 176 °F); short term to 100 °C (212 °F)
Sample pH	1 – 11 pH
Sample flowrate	50 to 150 ml/min
Sample conductivity	> 1.5 µS/cm for highest accuracy
Connection	AK9 or VP cable from sensor to instrument

ISM

Features Overview

– Pressurized gel electrolyte
– Accurate, fast responding temperature compensator
– Low resistance glass membrane
– Low volume 316 stainless steel flow housing

Typical Applications

– Reverse osmosis – pH adjustment of clean recycle water or between membranes in two pass systems to optimize rejection rates
– Power plant cycle chemistry
– Monitoring and controlling pH levels to comply with guidelines and minimize corrosion and scaling

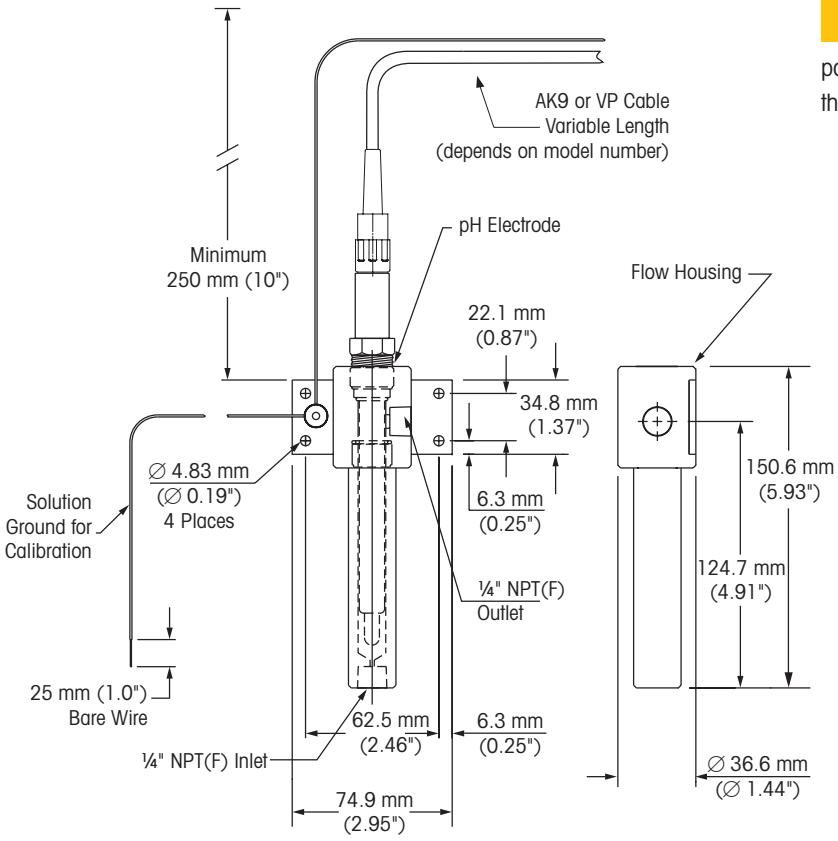
pHure Sensor dimensions



Did You Know

The small volume and high sample velocity of the pHure Sensor ensures fast response by preventing power plant corrosion products from accumulating around the electrode membrane.

For pH/ORP sensors recommended services, see page 183.

pHure Sensor LE with ISM

Reliable pH Measurement in Pure Waters

The METTLER TOLEDO Thornton pHure Sensor LE uses a free-flowing junction to provide the most accurate pH measurement available in low conductivity water. The electrode includes a special pH glass membrane, an integral, fast-responding temperature sensor, and VP or AK9 connection. All components of the pHure Sensor LE have been optimized for performance and value and conform to ASTM Standard D5128. The inclusion of ISM technology allows Plug and Measure capabilities, easier maintenance and convenient calibration. Various lengths of cable can be selected to provide flexibility in locating the sensor.

Specifications

Wetted materials	pH Glass, platinum solution ground/ORP
Process connections	¼" NPT(F) in/out
Flow housing volume	5 ml with electrode in place
Maximum pressure	Atmospheric pressure for measurement; can safely withstand 7 bar(g) (100 psig)
Sample temperature	0 to 100 °C (32 to 212 °F)
Sample pH	1 – 12 pH
Sample flowrate	50 to 150 ml/min
Sample conductivity	> 0.3 µS/cm for highest accuracy
Connection	AK9 or VP cable from sensor to instrument
Reference electrode	3M KCl

Features Overview

– Free-flowing junction/diaphragm
– Simultaneous pH & ORP measurements
– Accurate, fast responding temperature compensator
– Low resistance glass membrane
– Low volume 316 stainless steel flow housing
– Easily refillable electrolyte chamber

ISM

Typical Applications

pH/ORP Housings

Flexibility in Meeting Process Requirements

58 084 002

53 300 021

58 084 014

METTLER TOLEDO Thornton housings provide a fixed NPT or solvent weld process connection. For easy access to the electrode for cleaning, calibration or replacement, they have internal O-ring seals with hand-tightened mounting nut. The compact METTLER TOLEDO electrode design includes measuring, reference and fast-responding temperature compensator functions so only a single process connection is ever needed.

Housings should be mounted to orient the tip of the electrode at least 15° below horizontal to ensure reliable contact of internal electrolyte with the measuring membrane. They should not be mounted horizontally or upside-down.

Oxygen Measurement Systems
High Reliability and Wide Application Coverage

METTLER TOLEDO provides sensors to measure dissolved oxygen (DO) in demanding low ppb-level applications.

Measurement of dissolved oxygen
Proper oxygen levels are important in many processes involving the use of pure and ultrapure water. Control of dissolved oxygen will minimize corrosion, reduce costs or provide maximum semiconductor product yield.

The optical dissolved oxygen sensor
with its durable OptoCap sensing element ensures fast response time, highly accurate measurement, very low maintenance, and no dissolved hydrogen interference.

Electrochemical oxygen sensors
The Thornton high-performance sensors have been designed for in-line measurements of dissolved oxygen in the low ppb-range in power plant cycle chemistry and in ultrapure water applications of the semiconductor industry.

Professional service and validation
Sensor service includes rebuilding, cleaning, testing, and recertification of your Thornton sensor, done quickly and efficiently to minimize downtime.

Optical DO Sensor

High Performance
DO Sensor

Ozone Measurement Systems

Provide Accurate Response and Excellent Sensitivity

METTLER TOLEDO Thornton's dissolved ozone measurement systems show rapid and accurate response to ozone concentrations. The excellent sensitivity gives positive detection of zero ozone after destruction by UV light.

Measuring principles
Ozone passes through a gas-permeable reinforced membrane of exceptional durability producing an electrochemical reaction and current flow in direct proportion. Behind the membrane is the platinum cathode where ozone reacts to produce the measurement signal. The electrochemical reaction is completed at the silver anode. Full temperature compensation accounts for effects of both membrane permeability and solubility of ozone in water.

Important features
- Rapid, accurate response
- Positive zero detection
- Low maintenance with drop-in modular membrane

Ozone sanitization of pharmaceutical water systems
Complete sanitization is achieved by controlling ozonation downstream of the storage tank. A second ozone measurement guarantees the removal of all ozone downstream of UV destruction.

Ozone sanitization of semiconductor ultrapure water
Ozone sanitization can be controlled by monitoring the ozone concentration downstream of the ozonator and UPW storage tank. To be sure all ozone has been decomposed after UV lights, a second ozone measurement can confirm a zero level.

Ozone sanitization of bottled water
Continuous measurement and control to proper ozone levels of bottled water is a required quality practice that promotes consistent good taste and long shelf life.

Ozone sanitization of beverage systems
Ozonated water is used in place of chemicals for CIP operations when changing between flavors. Ozone provides cleaning and disinfection without risk of objectionable residuals or byproducts.

pureO_3 Dissolved Ozone Sensor

Pure Water Optical DO Sensor

Fast Response, Reduced Maintenance

ISM

METTLER TOLEDO Thornton's Optical DO Sensor provides high accuracy, fast response and increased stability in demanding low ppb-level applications. The outstanding measurement performance with low detection limit, minimum drift and shorter response time improves oxygen monitoring. The proprietary OptoCap design allows highly accurate measurement of dissolved oxygen without susceptibility to hydrogen interference in power generation. The easy maintenance without liquid handling and polarization increases the availability of the measuring system. Easy maintenance, without liquid handling and sensor polarization increases the convenience of the measuring system. Predictive maintenance with ISM permits easy maintenance planning, reducing downtime.

Specifications	
Operating range	0–5000 ppb
System accuracy	±2 % of reading or 2 ppb, whichever is greater
Response time at 25 °C (77°F) (Air_N_2)	98 % of final value in < 20 s
Sampling rate	Adjustable between 1 and 60 seconds
Sample flow rate	50–800 ml/min
Temperature compensation	Automatic
Measuring temperature range	0–50 °C (50–122 °F) for DO measure
Environmental temperature range	0 to 121 °C (32 to 250 °F)
Operating pressure	0.2 to 12 bar (2.9 to 174 psi absolute)
Design pressure	Maximum 12 bar (174 psi absolute)
Sample connections	¼" NPT(F)
Wetted materials	Stainless steel, silicone, EPDM O-ring
Cable length	2–50 m (6.6–164.0 ft)
Components needed	Optical DO probe, housing and cable
Construction	
Measuring principle	Fluorescence quenching
Cable connection	5-pin
Connector design	Straight
Sensor body	316 L stainless steel
Membrane material	Silicone
O-ring material	EPDM (FDA-positive listed)
Sensor diameter	12 mm

Features Overview

– High accuracy
– Fast response
– Enhanced stability and reliability
– Reduced maintenance and downtime
– No dissolved hydrogen interference
– No flow sensitivity

Typical Applications

– Power plant cycle chemistry monitoring
– Generator stator cooling
– Semiconductor ultrapure water
– Pure water treatment systems

M800*, DP Water 2-channel	½-DIN	2	58 000 806
M800*, Water 4-channel	½-DIN	2	58 000 804

*The M800 Pulse Flow Adapter (part number 58 080 116) allows an M800 ISM channel to be used with a pulse flow sensor to expand the number of flow sensors per M800 transmitter. The pulse output of the flow sensor is converted to a digital signal at the adapter and transmitted to the M800's ISM channel. By using the adapters, you can now connect up to four pulse flow sensors to a 2-channel M800 (2 ISM channels + 2 pulse channels) or six flow sensors to a 4-channel M800 (4 ISM channels + 2 pulse channels).

See p. 225 for full flow capabilities.

High Performance Dissolved Oxygen Sensors with ISM

Fast, Accurate Response

ISM

METTLER TOLEDO Thornton's high performance ppb-level dissolved oxygen measurement capability excels in demanding low ppb-level applications. It provides a precise zero and a highly accurate response over the entire range of measurement. This allows it to perform well at any level as well as providing very fast response to changes from one level to another. The inclusion of ISM technology allows Plug and Measure capabilities, easier maintenance and convenient calibration.

Specifications

Sample flow rate	50 to 1,000 ml/min
Sample temperature	0 to 60 °C (32 to 140 °F) for temperature compensation; can tolerate 100 °C (212 °F)
Sample pressure	0 to 5 bar(g) (0 to 72 psig)
Sample connections	¼" NPT(M)
Wetted materials	Polyacetal flow housing, polyphenylene sulfide probe body, PTFE membrane reinforced with stainless steel and silicone rubber, Viton® and silicone rubber O-rings
Cable length	Probe to instrument: 1 to 80 m (3.3 to 262.4 ft)
Weight	1 kg (2 lb) with flow housing
Response time	98 % of final value in 90 s
Operating range	0 – 10,000 ppb (µg/L)
System accuracy	± 1 % of reading or 1 ppb, whichever is greater; ± 0.5 °C

Features Overview

– High accuracy
– Simple maintenance with drop-in modular membrane
– Excellent long-term stability
– Temperature compensation for membrane permeability and oxygen solubility effects

Typical Applications

– Power plant cycle chemistry monitoring
– Semiconductor ultrapure water
– Pure water treatment systems

pureO_3 Dissolved Ozone Sensor with ISM

For Reliable Process Control

ISM

The pureO_3™ dissolved ozone sensor uses proven technology along with ISM for rapid and accurate response to a wide range of ozone concentrations. pureO_3 provides reliable ozone measurement in conjunction with many transmitters including various M800, M400, M300 and M200 ISM models.
Intelligent sensor data is stored in memory, providing Plug and Measure simplicity with enhanced diagnostics capabilities. Robust sensor construction is coupled with a membrane cartridge which allows exceptionally fast and easy replacement of electrolyte and membrane when necessary.

Specifications

Sample flow rate	200 to 500 ml/min with housing; 0.15 to 1 m/s (0.5 to 3 ft/s) without housing
Sample temperature	5 to 50 °C (41 to 122 °F) for compensation; probe can withstand 100 °C (212 °F)
Sample pressure	Normal operation, atmospheric; can withstand 0.8 to 3 bar absolute (0 to 45 psig)
Sample connections	¼" NPT(F)
Wetted materials	Polycarbonate or 316 stainless steel flow housing, 316L/1.4404 stainless steel probe, silicone rubber membrane, FKM O-rings
Cable lengths	1 to 80 m (3.3 to 262.4 ft)
Weight	0.5 lb (227 g)
Response time	90 % response in 30 s
Operating range	0–5,000 ppb (mg/L); 0–5.0 ppm (mg/L) short term; 0–500 ppb (mg/L); 0–0.5 ppm (mg/L) continuous
System accuracy	±1 % of reading or 0.4 ppb, whichever is greater

Features Overview

- Reinforced silicone membrane for exceptional durability
- Full temperature compensation accounts for effects of both membrane permeability and solubility of ozone in water
- Membrane cartridge provides easy replacement of electrolyte and membrane
- 21CFR Part 11 Data Integrity option when paired with an M800 Transmitter and RecordLOC software (see page 235)

Applications

- **Pharmaceutical water systems**
  Monitors sanitization levels and ensures removal of all ozone to satisfy the "no added substance" requirement, plus data integrity.
- **Semiconductor ultrapure water systems**
  Monitors ozone concentration downstream of the ozonator and UPW storage tank
- **Bottled water systems**
  Continuous ozone measurement is a key quality practice to provide good, consistent taste and long product shelf life
- **Beverage systems**
  Ozone replaces caustic chemicals for clean-in-place operations, providing disinfection without objectionable byproducts

Vortex Flowmeters

Maintenance Free, All-Plastic Construction

The ultimate solution for measuring the flow rates of ultrapure water and chemicals. The vortex flow sensors consist of a molded unibody and are available in PFA, PVC or PVDF. With no moving parts, any potential for fluid contamination is eliminated by the corrosive-resistant, all-plastic construction.

Specifications

PFA Version	
Display	4-digit LED plus high & low alarm indicators
Connections	Straight tube ends or Flaretek
Straight tube requirements	10 x diameter upstream and 2 x diameter downstream
Wetted materials	PFA Perfluoroalkoxy
Temperature	0 – 100 °C (32 – 212°F)
Viscosity	For liquids more viscous than water, consult Thornton
Electrical connections	2 m (6.5 ft) cable may be extended with 22 gauge 6-conductor shielded cable up to 100 m (325 ft) for pulse input only
Enclosure	NEMA 4X, IP65
Power supply	One external 12 - 24 VDC isolated power supply is required for one or two pulse input sensor
Certificate	CE rated, certificate of accuracy included

Sanitary Flow Sensors
High Quality, Precision

The sanitary turbine flow sensors are designed and manufactured to be compliant with the ASME Bioprocessing Equipment Standard BPE-2014 for measurement of process liquids where high sanitary standards are required. ASME-BPE-2014 is the leading standard on how to design and build equipment used in the production of biopharmaceuticals. This series includes 11 sizes, ¼" to 3" with standard Tri-Clamp™ fittings, covering flow rates of 0.75 to 400 GPM.

Specifications

Wetted Parts	Body 316 SS, Ra 32 microinch (0.8 micrometer) finish; 17– 4PH SS rotor; PH 15 – 7 Mo SS retaining rings; hard carbon composite bearings.
Certification	3A Rated, manufacturers calibration and materials certificates included.
Electrical connections	Wiring may be run up to 610 m (2,000 ft) with 3 conductor, 20 gauge, shielded cable, such as Belden 9364.
Process connections	To achieve optimum performance, maintain 3A certification and to protect the bearings from excess turbulance and damage, a minimum of 10 pipe diameters upstream and 5 pipe diameters downstream of turbine size pipe must be used.
Linearity	± 0.5 % of reading*
Repeatability	± 0.1 % of reading*
Temperature Range	**–40 °F to +325 °F, process fluid with std. magnetic pickup coil**

* Based on manufacturer's calibration in water at 70 °C

M800*, Water 4-channel	½-DIN	2	58 000 804

*The M800 Pulse Flow Adapter (part number 58 080 116) allows an M800 ISM channel to be used with a pulse flow sensor to expand the number of flow sensors per M800 transmitter. The pulse output of the flow sensor is converted to a digital signal at the adapter and transmitted to the M800's ISM channel. By using the adapters, you can now connect up to four pulse flow sensors to a 2-channel M800 (2 ISM channels + 2 pulse channels) or six flow sensors to a 4-channel M800 (4 ISM channels + 2 pulse channels).

See p. 225 for full flow capabilities.

Total Organic Carbon (TOC)
ISM Technology

Introduction to ISM Technology
The 6000TOC i Sensor uses Intelligent Sensor Management technology interfacing with the M800 Multi-parameter Analyzer/Transmitter. This technology allows the M800 to recognize the configuration and sensor parameters when connected. The M800 instrument will allow up to two or four 6000TOC i Sensors to be connected to any of the four input channels. Any remaining channels are available for use with any other ISM Sensors. The M800 also provides two pulse input channels for additional flow measurements.

The Sensor connects directly to the M800 instrument using standard patch cables. The 6000TOC i Sensor is designed to meet the requirements of today's industrial facilities with its CE and UL ratings. Combined with the M800 instrument it provides the most versatile and flexible TOC measurement platform available.

Measurement technology UV Oxidation/Differential Conductivity
Thornton 6000TOC i, 4000TOCe and 450TOC products use proven ultraviolet oxidation with differential conductivity (see Figure 1) as the method to effectively determine TOC concentrations.

High performance digital conductivity sensors provide continuous conductivity measurement before and after sample oxidation. This is accomplished using a continuous flow-through spiral quartz tube design that allows the sample to flow continuously through the sensor. This design maximizes exposure to the 185 nanometer UV light, while minimizing measurement response time and providing complete oxidation. This simple and effective design requires no reagents or chemicals and has no moving mechanical components.

The formation of hydroxyl radicals in the water during UV exposure produces a mechanism through which bonds in non-ionic organic compounds are broken and oxidization occurs to form products such as carbon dioxide and water. The carbon dioxide dissolves in the water and forms carbonic acid, which dissociates into ionic-conductive species. This change in conductivity is associated with TOC (see Figure 2).

USP/EP and SST
In the Pharmaceutical Water production process, System Suitability Testing (SST) is an essential activity to verify the performance of a Total Organic Carbon monitoring system and to ensure its adequacy for TOC analysis.

USP and EP Requirements
In the requirements for TOC measurement, the United States Pharmacopoeia and European Pharmacopoeia have established specific Total Organic Carbon (TOC) tests as described in USP General Chapter <643> and EP Chapter 2.2.44, respectively.

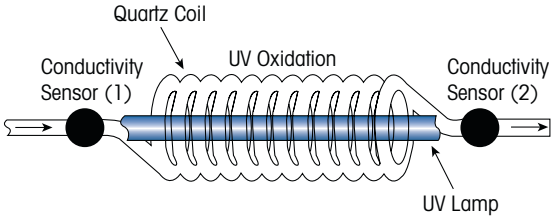

Figure 1

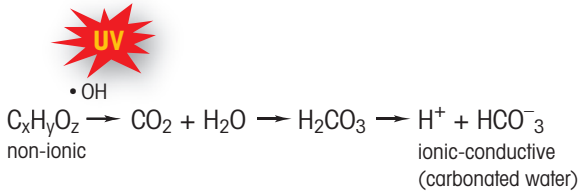

Figure 2

A TOC sensor model to meet your exact needs

6000TOCi

The 6000TOCi on-line sensor delivers true continuous measurement for the detection of organic contamination. With an extremely rapid response to TOC changes, the 6000TOCi is ideal for all pure water applications where real-time monitoring is critical.

6000TOCi Low PPB

The 6000TOCi low ppb on-line sensor delivers rapid response and trace sensitivity to organics at sub-ppb concentrations to meet the semiconductor application demand of achieving ever-narrowing line widths. The sensor's real-time response reveals swift changes in TOC levels, ensuring greater process control over UPW purification.

4000TOCe

The on-line 4000TOCe total organic carbon sensor provides real-time monitoring of TOC levels for pure and ultrapure water applications, from reverse osmosis post-treatment to point-of-use. The 4000TOCe sensor, combined with the menu-driven M300 transmitter, provides an easy-to-use analytical package that enhances operational performance and offers extensive system diagnostics.

450TOC Portable

The 450TOC total organic carbon analyzer offers the fastest response available in an easily transportable TOC system. Its robust, portable design and convenient multi-point sampling ability make the 450TOC a valuable tool for periodic sampling and water system diagnostics.

4000TOCe

Easy to Use On-line Measurement

The enhanced 4000TOCe Sensor provides continuous on-line measurement of Total Organic Carbon in a low maintenance industrial package. In addition to using proven UV oxidation with differential conductivity to determine TOC concentration, the 4000TOCe model now features automatic flow control to ensure consistent water flow through the system.

Features/Benefits

- On-line continuous measurement for fastest response
- Advanced UV lamp design extends stability and wavelength emission over lamp life
- Sample Conditioning Coil (included) can prevent CO_2 permeation into the water sample and will stabilize inlet flow, pressure and temperature irregularities
- Local LED Sensor status indication
- Continuous flow design provides rapid detection of system changes
- No gases or reagents to handle, store or replace and no moving parts minimize routine maintenance and service intervals
- Plug and measure sensor design reduces installation and setup time
- Real-time continuous monitoring for precise data trending and better process control
- Wide dynamic operating range meets the needs of pure and ultrapure water applications
- Meets USP <643>, <645>, EP 2.2.44, Ch.P and JP requirements for the Pharmaceutical Industry

Applications

- Pure and Ultrapure water
- Pharmaceutical-grade water
- Recycle and reclaim
- Power generation

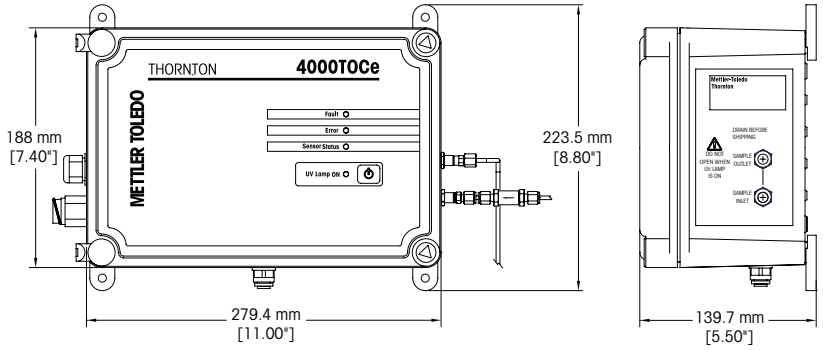
Repeatability	±0.05 ppb C < 5 ppb, ± 1.0 % > 5 ppb
Resolution	0.001 ppbC (µgC/L)
Analysis time	Continuous
Initial response time	< 60 s
Limit of detection	0.025 ppbC
Conductivity Sensor	
Conductivity accuracy	± 2%, 0.02-20 µS/cm; Constant Sensor [a]
Cell constant accuracy	±2 %
Temperature sensor	Pt 1000 RTD, Class A
Temperature accuracy	±0.25 °C
Sample Water Requirements	
Temperature	0 to 100 °C [b]
Particle size	<100 micron
Minimum water quality	≥0.5 MΩ-cm (≤ 2 µS/cm), pH < 7.5 [c]
Flow rate	≥20 mL/min
Pressure	0.3 bar(g) to 6.9 bar(g) (4 to 100 psig) at sample inlet connection [d]
General Specifications	
Case dimensions	280 mm (11") W × 188 mm (7.4") H × 133 mm (5.25") D
Weight	2.3 kg (5.0 lb)
Enclosure material	Polycarbonate plastic, flame retardant, UV and chemical resistant
Ambient temperature / Humidity rating	5 to 50 °C (41 to 122 °F) / 5 to 80 % Humidity, non-condensing
Power requirements	100 – 130 VAC or 200 – 240 VAC, 50/60 Hz, 25 W Maximum
Local indicators	Four LED lights for Fault, Error, Sensor Status and UV Lamp ON
Ratings/approvals	CE Compliant, UL and cUL (CSA Standards) listed, Conductivity and temperature sensors traceable to NIST, ASTM D1125 and D5391. Meets ASTM D5173 Standard Test Method for On-line Monitoring of Carbon Compounds in Water by UV Light Oxidation
Sample Connections	
Inlet connection	3 mm (0.125") O.D. (2 m (6") FDA compliant PTFE tubing supplied)
Outlet connection	6 mm (0.25") O.D. Barb connection (1.5 m (5") flexible tubing provided)
Inlet filter	316 SS, in-line 60 micron
Wetted parts	316 SS/Quartz/PEEK/Titanium/PTFE/EPDM/FFKM
Wall mount	Standard, mounting tabs provided
Pipe mount	Optional, with pipe-mount bracket accessory for nominal pipe sizes 2.5 cm (1")
Maximum sensor distance	91 m (300')

a Readout in equivalent S/m ranges selectable at M300TOC.
b Temperature above 70°C requires Sample Conditioning Coil (included).
c For power plant cycle chemistry samples, pH may be adjusted by measurement after cation exchange.
d Process pressure above 5.9 bar(g) (85 psig) requires optional High Pressure Regulator p/n 58 091 552.

For TOC sensors recommended services, see page 209.

Dimensions



6000TOCi
On-line, Fast and Continuous

The 6000TOCi total organic carbon sensor provides true continuous measurement, refreshing every second, for immediate detection of organic contamination. It's dependable and reliable design uses proven UV oxidation technology for real-time TOC monitoring of your critical water systems. Easily and efficiently monitor TOC levels from post RO waters to point-of-use so you will never miss an excursion. Constructed with the user in mind, its intuitive interface and flexible Plug and Measure design requires no reagents or chemicals for operation.

Features/Benefits
- On-line continuous measurement
- Meets USP <643>, <645>, EP 2.2.44, Ch.P and JP requirements for the Pharmaceutical Industry
- Semi-automated Calibration and System Suitability Test
- Intelligent Sensor Management (ISM) Interface
- Intelligent diagnostics with iMonitor
- Peak, Average and Rate-of-Change TOC measurement for compliance monitoring
- Compatible with M800 multi-parameter transmitter
- Install up to four TOC sensors to one M800 transmitter
- USB printer capable
- USB for data logging
- Automated flow control
- At-a-glance LED status
- Universal Power Ballast
- 21CFR Part 11 Data Integrity option when paired with an M800 Transmitter and RecordLOC software (see page 235)

True Continuous Measurement
With an initial response rate of less than a minute and measurement updates every second, the 6000TOCi is ideal in all pure water applications where rapid detection of TOC changes is critical.

Stable and reliable analysis
With highly stable and reproducible TOC measurements, you can be confident that you have the control over your water system that is required to meet regulatory and internal water quality specifications.

Verifiable system performance Intelligent Sensor Management (ISM) advanced diagnostics help ensure your sensor performs optimally at all times.

Supports regulatory compliance
For regulated industries, the 6000TOCi Sensor and M800 Transmitter provide the tools necessary to be compliant. They satisfy the requirements of all major global pharmacopeias for TOC instrumentation, including USP, EP, JP, ChP and IP. ALCOA-compliant audit trail for data integrity when paired with an M800 Water 2-channel RecordLOC transmitter and RecordLOC software (see page 235).

Did You Know

The sample conditioning coil optimizes the 6000TOCi sensor performance under adverse conditions such as:

– High sample temperature
– A highly humid environment
– Varying inlet pressure

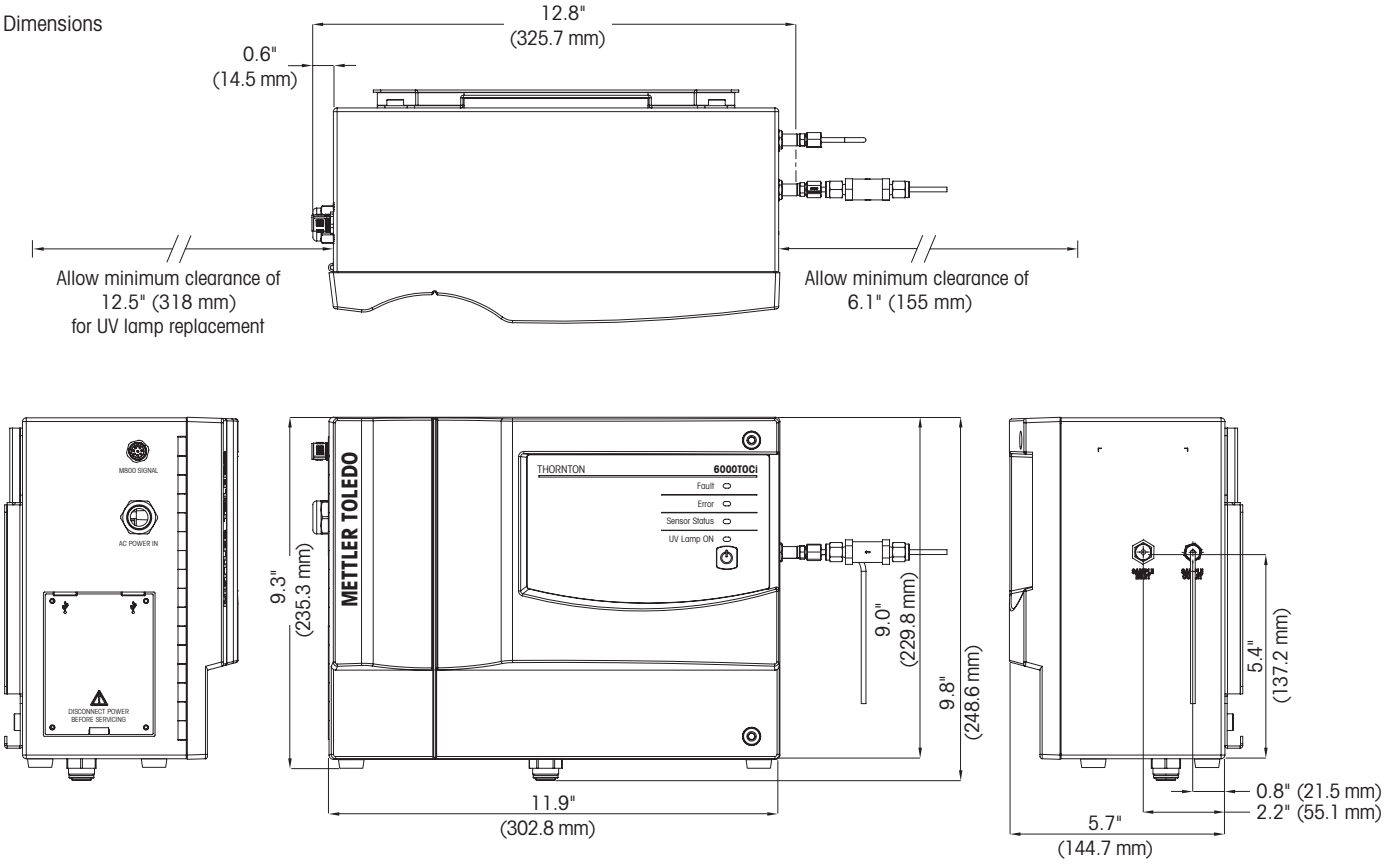
It also prevents CO_2 ingress into the sample.

System Suitability Testing

Since the 6000TOCi sensor provides continuous monitoring, the system suitability test can be performed far faster than other TOC measurement technologies which rely on lengthy batch measurement or laboratory analysis. During the System Suitability Test, the operation of the instrument is identical to normal operating conditions with no extra oxidation cycle times. The solutions are easily introduced into the system, and results are available in minutes.

The system suitability test kit from Thornton provides the equipment needed to perform a system suitability test on the 6000TOCi Sensor. The system suitability test kit is designed for use with the system suitability standards solutions kit available from Thornton. The Solutions Kit includes one bottle of 500 ppb sucrose, one bottle of 500 ppb1,4-benzoquinone and two bottles of reagent TOC water. The solutions are produced from USP Reference Standards for assured consistency, quality and compliance.

Dimensions



6000TOCi Low ppb

Rapid detection of TOC changes

Features Overview

- On-line continuous measurement
- Semi-automated Calibration
- Intelligent Sensor Management (ISM) Interface
- Intelligent diagnostics with iMonitor
- Peak, Average and Rate-of-Change TOC measurement for compliance monitoring
- Compatible with M800 multi-parameter transmitter
- Install up to four TOC sensors to one M800 transmitter
- USB printer capable
- USB for data logging
- Automated flow control
- At-a-glance LED status
- Universal Power Ballast
- On-site, high precision calibration at low ppb concentrations with certificate of compliance provided

Real-time Total Organic Carbon Control.
The 6000TOCi online sensor delivers true continuous measurement for the detection of organic contamination. With an extremely rapid response to TOC changes, the 6000TOCi is ideal for all pure water applications where rapid detection of TOC changes is critical.

Real-Time Transparency of TOC Levels
Achieve clear control of your water system with the fastest response time available and measurement updates every second for continuous TOC analysis.

Conclusive Data to Support Compliance
The 6000TOCi uses proven UV oxidation technology and highly accurate conductivity sensors to deliver consistent and accurate determination of organic material.

Verifiable System Performance
Using advanced sensor diagnostics, the 6000TOCi gives you the insight needed to ensure your TOC system is always measuring effectively.

Features/Benefits

Measuring range	0.05–2000 ppbC (µgC/L)
Measurement Range	0.05 ppb–2,000 ppb
Response Time	60 s
Detection limit	0.025 ppb
Pressure Range	0.3 bar–13.6 bar (4 psi–200 psi)
Temperature accuracy (±)	± 0.25 °C
Analysis Time	Continuous
Limit of Detection	0.025 ppbC
Flow rate	> 8.5 mL/min
Maintenance	6 mo UV replacement
Weight	6 kg (11.0 lb)
Repeatability	± 0.05 ppbC < 5 ppbC, ±1.0 % > 5 ppbC
Temperature Sensor	Pt1000 RTD, Class A
Dimensions W×H×D	302.75 mm × 229.8 mm × 144.7 mm 11.9" × 9" × 5.7"
Online or Portable	Online
Enclosure Material	Powder-coated aluminum back enclosure and polystyrene resin front enclosure.
Initial Response Time	< 60 seconds
Resolution	0.001 ppbC (µgC/L)
Operating Range (Temp.)	0 °C–100 °C
Conductivity Accuracy	± 2 %, 0.02–20 µS/cm ± 3 %, 20–100 µS/cm
Cell Constant (accuracy)	± 2 %
Intelligent Sensor Management (ISM™)	Yes

450TOC
Portable TOC Measurement

The 450TOC Total Organic Carbon analyzer from METTLER TOLEDO Thornton offers the fastest response to TOC changes available in a portable TOC system. With its robust, portable design the 450TOC is an ideal tool for multi-point TOC measurement for point-of-use monitoring, water system diagnostics, and maintenance verification.

Portable, Real-time TOC Measurement

- Reduce system and component verification time by 80 % with portable, real-time total organic carbon analysis
- Ensure 100 % system compliance with fast, simple and easy point-of- use monitoring
- Reduce system diagnostics time by 80 % with fast, on-the-spot test results for TOC and conductivity
- Quickly capture and analyze results with on-board USB stick data collection and simple export to spreadsheet programs
- Eliminate costly sampling errors by bringing the measurement directly to the sampling point

Other Highlights
- Continuous measurement technology for superior system profiling and performance trending
- USB printer support for hard-copy record keeping
- Compliant with USP, EP, Ch P and JP

TOC Pump Module

Valveless Design, Drift-Free Performance

The Pump Module uses a precision, positive displacement pump to provide a highly stable, metered flow of process water to the TOC sensor to ensure reliable and consistent TOC measurement performance. This accessory is recommended for applications where system pressure is either too low to provide adequate flow through the TOC sensor, or for low pressure applications where system pressure may vary routinely during operation. The Pump Module is ideally suited for applications such as distillation, RO permeate, CIP and pharmaceutical washing.

Features Overview

– Positive displacement pumping mechanism
– Flow rate independent of supply pressure
– Requires only a wetted-suction for operation
– Flow pre-set for 20 ml/min or 8.5 ml/min
– Universal AC supply

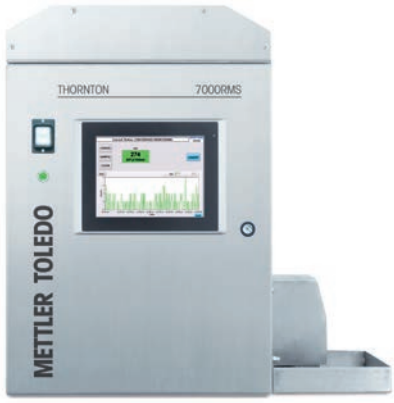
7000RMS Microbial Detection Analyzer

Continuous, At-line and Dependable



Modbus

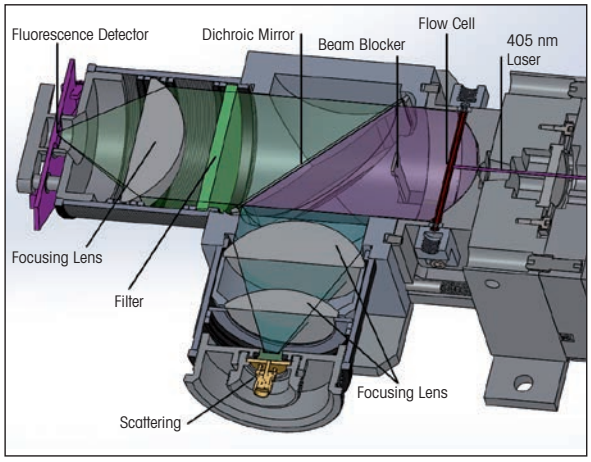
CE cULus LISTED

METTLER TOLEDO Thornton's 7000RMS™ (Real-time Microbial System) is an at-line analyzer for real-time measurement of microbial contamination (bioburden) in Pharmaceutical Waters. Advanced, laser-induced fluorescence and Mie scattering measurement technology provides immediate detection and quantification of microorganisms. The compact analyzer overcomes limitations of growth-based technologies that are dependent on incubation conditions, growth media, reagents and time.

The 7000RMS enables risk reduction and greater process control, and offers significant costs savings from the combined decrease in laboratory testing and false-positive results.

Features/Benefits

– Continuous results every 2 seconds, no incubation or preparation needed
– Laser-induced fluorescence allows for the measurement of AFU
– Detection is not based on organisms forming a colony
– Increase process control by monitoring/reacting to water system trends prior to an out-of-specification event
– Reduce risk of releasing contaminated water
– Convenient touchscreen display with intuitive user interface
– Monitor at-line
– Alarms for alert, action and breach limits
– SCADA connectivity, analog output, Ethernet and Modbus compatible



Cross-section drawing of the optical detection system

Typical Applications

Continuous monitoring of PW, WFI and UPW
– Distribution loops
– Sub loops
– Return loops
– Recirculating storage tanks
– Post purification before storage
– Sampling points

Laser Certifications

– The 7000RMS analyzer is certified as a Class 1 laser product.
– The 7000RMS unit contains a Class 3B Laser System, as specified by IEC 60825-1 Ed.3 (2014).

Specifications

General Specifications	
Flow rate	30 mL/min
Detection limit	1 AFU (Auto Fluorescent Units)
Minimum detection size	≥0.3 µm
Response time	2 seconds (1 mL)
Data communication	– Ethernet - standard RJ45/Wi-Fi capable – SCADA connectivity via Modbus TCP – Analog output channels; 4–20 mA standard, with configurable output ranges – USB
Water Requirements	
Temperature (non-condensing)	5–90 °C (41–194 °F)*
Inlet pressure	2–5.5 bar(g) (20–80 psig)**[1]
Type/Quality	Purified Water (PW), Ultrapure Water (UPW), Water for Injection (WFI)
Power/Installation/Enclosure	
Power requirements	100–240 VAC, 50–60 Hz, 5A Use the power cord included with the instrument 2.5 m (8.2 ft) cord length provided standard
Ambient temperature (non-condensing)	0–37 °C (32–98.6 °F)*
Inlet connection; Outlet connection	3 mm (0.125") O.D.; 3 mm (0.125") O.D.
Wall mount	Anti-vibration shelf required (P/N 58 079 700)
Enclosure material	Stainless steel
Physical dimensions (W × H × D)	56.4 cm × 61.6 cm × 30.5 cm (22.2" × 24.25" × 12")
Weight	33.3 kg (73.4 lbs)
Environmental Conditions	
Altitude	Up to 2000 m (6562 ft)
Environmental Temperature	5–35 °C (41–95 °F)
Environment	Pollution degree 2
Humidity (non-condensing)	80% maximum relative humidity up to 31 °C (87.8 °F) decreasing linearly to 50% relative humidity at 40 °C (104 °F)
Voltage	MAINS supply voltage fluctuations up to ±10% of the nominal voltage of 100–240 VAC 50–60 Hz TRANSIENT OVERVOLTAGES: up to levels of OVERVOLTAGE CATEGORY II TEMPORARY OVERVOLTAGES occurring on the MAINS SUPPLY

* Temperature below 15 °C or above 45 °C requires Sample Conditioning Coil (included)

** Process pressure above 80 psig (5.5 bar(g)) requires optional High Pressure Regulator (P/N 58 091 552). For Process inlet pressure below 2 bar (20 psig use the 7000RMS Pump Module Accessory (P/N 30 616 889) [Min pressure ≥5psig (0.34 bar(g)); Max pressure ≤50psig (3.44 bar(g))]

[1] Calibration, cleaning and grab sample requires sample pressure of 0 psig (0 bar(g))

2300Na Sodium Analyzer

High Sensitivity, Low Maintenance

The METTLER TOLEDO Thornton 2300Na Sodium Analyzer offers a new approach for a traditional measurement in pure/ultrapure water treatment and power cycle chemistry monitoring. This analyzer provides assurance of water purity to minimize corrosion and maximize water production during power generation. It also ensures water purity in microelectronics production through early detection of breakthrough in cation resin during ultrapure water treatment. Early detection of trace contamination is enabled with minimal operator supervision.

Features/Benefits

– Fully automatic, unattended calibration: ensures reliable operation while saving technician time
– Reagent addition confirmation by pH: ensures reliable measurement results
– Convenient grab sample measurement: for additional samples and QC checks for other areas of the plant
– Slow and complete reagent consumption: saves reagent costs and eliminates waste disposal issues
– Simultaneous display of sodium, adjusted pH, temperature and calibration progress: provides convenient analyzer and sample status at a glance, saving operator time
– Automated electrode conditioning with each calibration: minimizes the need for electrode etching
– Choice of two enclosures: full locking door for dirty plant environments or with controls conveniently accessible for clean sample rooms
– Four analog outputs for sodium, pH and temperature with choice of scaling: enables full integration into data acquisition or control systems

Typical Applications

– Ultrapure water monitoring at sub-ppb sodium levels
– Cation exchange monitoring in pure water treatment detects the first breakthrough of sodium
– Power steam quality monitoring protects turbines from sodium attack
– Power condensate monitoring detects small leaks early to allow time to plan corrective action

Specifications

Measurements	
Response time (90 %)	5 min
Update rate	Once per second
Reagent consumption	Diisopropylamine, DIPA, or Ammonium Hydroxide, approximately 0.7 L filling per 2 months; more at higher temperatures and for cation exchange samples
Sample pH	2.5 – 12
Sample flow rate	> 40 mL/min (> 20 mL/min for cation exchange samples), excess to drain
Sample temperature	5 – 50 °C (41 – 122 °F)
Sample pressure	0.3 – 7 bar(g) (5 – 100 psig)
Calibration	Automatic, unattended 3-point known addition; manual 1- or 2-point
Electrode conditioning	Part of auto-cal sequence
Grab sample measurement	Included
Range, temperature	0 – 100 °C (32 – 212 °F)
Outputs	
Analog outputs	For sodium, conditioned pH, temperature; four powered 0/4 – 20 mA, 22 mA alarm, 500 ohm max load, not for use with externally powered circuits
Analog output scaling	Linear, bi-linear, logarithmic (1,2,3 or 4 decades) or auto ranging
Analog output accuracy	± 0.05 mA
Relay contacts	Two unpowered, SPDT, 250 VAC/30 VDC, 3 A resistive freely assignable to setpoints for sodium, pH, temperature; other relays used for auto-cal
Installation/Power/Enclosure	
Operator interface	4-line backlit LCD, 5 tactile keys; simultaneous display of sodium, conditioned pH, auto-cal status (temperature optional)
Connections	Sample inlet: 1/4" or 6 mm OD tube SS compression fitting Drain hose: 19 × 25.4 mm (¾ × 1"), 2 m (6 ft) length included
Power	100 – 240 VAC, 50 – 60 Hz, 25 W; on power loss all settings are retained without batteries
Dimensions HWD	Enclosures: 900 × 450 × 190 mm (35.4 × 17.7 × 7.5")
Weight	27 kg (60 lbs)
Ambient operating temperature	10 – 45 °C (50 – 113 °F)
Humidity	10 – 90 % non-condensing
Ratings/approvals	CE, cULus

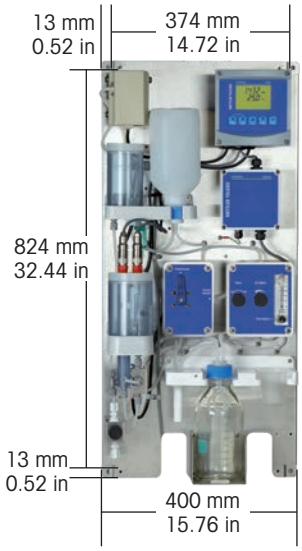
2301Na Sodium Analyzer

Accurate and Reliable Measurement, Solid Value

The METTLER TOLEDO 2301Na Sodium Analyzer offers an open panel-mounted design for pure water treatment projects. This analyzer features a measurement range starting at 0.01 ppb for trace measurement applications. This low-maintenance analyzer has a manual calibration process to ensure accurate measurements and to help you identify cation resin breakthrough during pure water treatment. This analyzer offers add-on features to enhance capabilities according to your project's needs.

Features / Benefits

- Wide measurement range: 0.01ppb-100,000ppb assures early detection of trace contamination
- Choice of reagent, DIPA or Ammonium Hydroxide to better comply with plant safety requirements
- pH check verifies reagent delivery assuring reliability of measurement
- Two models available, a panel-mounted assembly or lockable full-door enclosure
- Controlled, efficient reagent consumption eliminates waste disposal issues
- Low maintenance ensures low cost of ownership
- Grab sample capability is available as an add-on option for testing samples in multiple areas of the plant



Specifications

Measurements	
Range, sodium	0.01 – 100,000 ppb or equivalent ppm, auto ranging
Resolution, sodium	4 digits with decimal, auto ranging; 0.001 ppb in lowest range
Accuracy, sodium	± 10 % of reading ± 0.1 ppb, typical; using DIPA as reagent ± 10 % of reading ± 1 ppb, typical; using ammonium hydroxide as reagent
Response time (90 %)	5 min
Update rate	Once per second
Reagent consumption	Diisopropylamine (DIPA), or ammonium hydroxide, approximately 0.7 L fillings per 2 months; more at higher temperatures and for cation exchange samples
Sample pH	2.5 – 12

Ammonium Hydroxide 30 %	58 091 114

Key Power Applications

- **Make Up Water:** Detects cation breakthroughs of sodium ions signaling exhaustion of cation resin.
- **Condenser and Polisher:** Warns of cation breakthrough and condenser leakage.
- **Economizer:** Detects sodium carryover into inlet water before it enters the boiler.
- **Superheater:** Detects sodium carryover into steam to protect turbines.

For Analyzers recommended services, see page 221.

Did You Know

SQ144 and SQ148 Sequencers offer the capability to measure up to 8 sample streams with a single sodium, silica, chloride/sulfate analyzer. Please speak with your METTLER TOLEDO representative to learn more.

2850Si Silica Analyzer
Intelligent, Flexible, Compact

The METTLER TOLEDO Thornton 2850Si Silica Analyzer is a compact and reliable on-line analyzer designed for measuring silica in pure/ultrapure water treatment and power cycle chemistry monitoring. It supports early detection of trace contamination with minimal operator supervision, proactively monitors reagent usage and reports time to maintenance. This analyzer offers optional built-in sequencing to support multiple sample streams and phosphate monitoring to ensure sufficient levels are maintained for optimal boiler water treatment.

Features/Benefits

– Automatic, unattended calibration provides excellent repeatability and saves operator time
– Automatic zeroing with every measurement ensures measurement stability
– Convenient grab sampling allows quality testing of remote samples
– Intelligent internal analytics ensure peak performance and minimal downtime
– Configurable simultaneous display of parameters including silica/phosphate levels and measurement timing
– Analog output with choice of scaling for integration into data acquisition system
– Available as panel assembly or with full enclosure that protects reagent containers and components from plant environment
– Small footprint simplifies upgrades and saves valuable panel space
– Lightweight, compact, simple-to-maintain design supports up to four sample streams

Typical Applications

– Anion exchange monitoring in pure water treatment detects the first breakthrough at very low ppb levels of silica to trigger regeneration and ensure contaminated water can be diverted before it reaches critical areas.
– Power steam quality monitoring protects turbines from silica deposition and resulting imbalance, loss of capacity and reduced efficiency. Silica measurement and control may also be needed to meet turbine manufacturer warranty requirements.
– At larger plants, monitoring silica levels at the economizer provides a final feedwater quality check before the pre-heated water enters the stream drum.
– When treating boiler water with phosphate, monitoring ppm levels is important for maintaining appropriate concentrations to control scale and protect against caustic corrosion.

Specifications

Measurements	
Silica measurement range	0.5 – 5,000 ppb
Phosphate measurement range	0.3 – 10 ppm
Silica measurement accuracy	± 5 % of reading or ± 1 ppb, whichever is greater
Phosphate measurement accuracy	± 10 % of reading or ± 0.3 ppb, whichever is greater
Resolution	4 digits with decimal, auto ranging; 0.001 ppb in lowest range
Measurement cycle time	Adjustable ≥ 10 min; 20 min typical
Reagent consumption	Approx. 500 mL each per 3 months with 20 min measurement cycle time
Sample flow rate	50 – 250 mL/min
Sample temperature	5 – 60 °C (41 – 140 °F)
Sample pressure	0.3 – 7 bar (5 – 100 psig)
Zero calibration	Automatic, every measurement cycle
Span calibration	Automatic per schedule; once per month, typical
Grab sample measurement	500 mL capacity
Outputs	
Analog output	8 powered 0/4 – 20 mA, 22 mA alarm, 500 ohm max load, not for use with externally powered circuit
Analog output accuracy	± 0.05 mA
Analog output scaling	Linear, bi-linear, logarithmic (1,2,3,4 decades), auto ranging
Relay contacts	4-SPST mechanical rated at 250 VAC, 3 A; 4-SPST Type Reed 250 VAC or DC, 0.5 A
Digital input	Remote start/stop of measurement cycle
Communication	PROFIBUS DP
Installation/Power/Enclosure	
Operator interface	TFT color touchscreen; simultaneous display of silica/phosphate concentration and measurement or auto-cal status
Process connections	Sample inlet: 6 mm or 1/4" OD tube SS compression fitting Drain hose: 19 × 25.4 mm (¾ × 1"), 2 m (6 ft) length included
Power supply	100 – 240 VAC, 50 – 60 Hz, 65 W; all settings retained on power loss
Dimensions HWD	Enclosure: 543 × 396 × 300 mm (21.4" × 15.6" × 11.8")
Weight	18 kg (40 lbs)
Ambient operating temperature	10 – 50 °C (50 – 122 °F)
Humidity	10 – 90 % non-condensing
Ingress protection	IP 66/NEMA 4X (Electronics); IP 55 (Enclosure)
Ratings/approvals	CE, cULus, UKCA

Specifications subject to change.

3000CS Chloride & Sulfate Analyzer

High Sensitivity, On-line Measurement

The METTLER TOLEDO Thornton 3000CS Analyzer is a reliable on-line instrument designed to directly measure chlorides and sulfates in pure water and power cycle chemistry. This analyzer enables monitoring of these highly corrosive contaminants to assist in corrosion control and minimizing damage to critical plant equipment. Early, unambiguous detection of trace levels of these contaminants is enabled with minimal operator supervision.

Features/Benefits

– Intuitive touchscreen interface: allows display of trendlines for each measurement
– Simultaneous display of ion concentrations and measurement timing: provides convenient analyzer status at a glance, saving operator time
– Convenient grab sample capability: allows measurement of additional samples or for QC checks
– Full enclosure: protects internal reagent containers and components from plant environment

Typical Applications

– Steam quality monitoring at turbine inlet to ensure chloride and sulfate levels are under acceptable limits.
– Condensate monitoring at condensate polisher, to detect breakthrough or deterioration of sulfonated cation resin.
– Boiler feedwater monitoring, to activate boiler blowdown if needed to control contaminant levels.
– Makeup water quality.

Service Description	Order Number
Setup and Configuration Provides fast and reliable setup and standard configuration to ensure the analyzer is ready for use in your application.	S39905182
ExtendedCare Ensure peace of mind and maximize uptime with this full coverage service contract over the first 24 months of your equipment's life. With preventive maintenance right from the start, you minimize possible long term impacts on your equipment too.	B39950001
ComprehensiveCare Continue maximized uptime beyond your analyzer's first 24 months with this comprehensive service offering. Avoid risk and protect your equipment against downtime, performance issues and unexpected repair labor and material cost.	B39910001
BasicCare Service contract provides a faster response time with priority scheduling. It includes full preventive maintenance which covers calibration, inspection, cleaning and operational testing to catch any out-of-specification performance issues.	B39910003

Transmitters for All Parameters
Your Access to Water Analytics

Whether you require a multi-parameter, multi-channel, parameter specific or portable unit, METTLER TOLEDO's wide portfolio of globally-approved transmitters includes the right solution for you.

Constant information
Transmitters are the components that communicate to the user and translate sensor readings into displayed measurements for indication and control. METTLER TOLEDO provides tailorable transmitter solutions to meet the needs of a wide range of applications and functional requirements. Intelligent diagnostics keep users informed of sensor "health".

Single- or multi-channel?
For simpler processes where only a single parameter requires measurement, a single-channel transmitter is the obvious choice, but for processes where more than one parameter must be monitored, multi-channel, multi-parameter transmitters offer significant advantages and value. METTLER TOLEDO multi-channel transmitters combine operating flexibility with ease of use.

Communication
We offer transmitters for most common communication protocols for easy interface with your DCS or PLC. Intelligent Sensor Management (ISM) diagnostics data can also be accessed on control systems to provide an overview of the performance of all measurement systems from one point.

OK

The way forward

Use of digital sensors is becoming increasingly common in the process industries. Many of our transmitters accept traditional analog as well as ISM digital sensors, providing a future oriented investment in your plant.

Our latest transmitter developments include the M800 multi-parameter, multi-channel unit. Its large touchscreen display and intuitive menus save operating time, while predictive maintenance ensures reliability and reduced maintenance. The M300 is flexible, price competitive and offers single and dual channel measurements with ISM or analog sensors. The M200 has been designed around one central requirement: ease-of-use. From system selection to commissioning, operation and maintenance, all M200 system components are narrowly tailored to include only necessary functions. METTLER TOLEDO Thornton transmitters provide reliable performance for measuring conductivity, total organic carbon (TOC), pH, ORP, dissolved oxygen, dissolved ozone and flow.

M200: Convenient and Reliable
For Basic Water Applications

The METTLER TOLEDO M200 transmitter line provides an exceptional ease-of-use interface for digital conductivity, pH, ORP, dissolved oxygen and ozone measurement. From system selection to commissioning, operation and maintenance, all system components are designed to eliminate any unnecessary functions. Plug and Measure provides maximum compatibility and easy operation for digital sensor operation. Simply connect selected digital ISM or unique to M200 digital easySense sensors and the transmitter does the rest.

Specifications

Enclosure/Power	
Operator interface	4 line backlit LCD; 5 tactile keys
Material	Polycarbonate
Weight, ¼ DIN models	0.7 kg (1.5 lb)
Weight, ½ DIN models	1 kg (2.2 lb)
UL electrical environment	Installation (overvoltage) Category II
Ratings/approvals	UL (US & Canada), CE compliant; ¼ DIN: IP 65 (front); ½ DIN: IP 65/UL 4X
EMC emissions	EN61226-1:2013 Class A
Power	Universal 100–240 VAC, 50–60 Hz or 20–30 VDC; 5 W
Outputs	
Analog outputs (as specified for individual models)	Powered 0/4–20 mA, 22 mA alarm, 500 Ω maximum load; not for use with externally powered circuits
Analog output accuracy	±0.05 mA
Analog output scaling	Linear, bi-linear, logarithmic (1,2,3 or 4 decades), auto ranging
Relays (as specified for individual models)	All contacts are potential free, with adjustable hysteresis and time delay
Flow models only	SPDT, SPST NO, SPST NC: 250 VAC/30 VDC, 3 A, resistive SPST reed: 300 VDC, 0.5 A, 10 W
Service interface	USB, type B connector, for remote configuration and commissioning
Discrete input (as specified individual models)	Accepts dry contact closure for remote flow totalizer reset or for remote PID control auto/manual selection

Other Highlights
- Digital easySense and ISM sensor compatibility
- Quick setup mode for fast installation
- Digital, backlit, high contrast display

Features Overview
- Multi-parameter allows up to two user-configurable channels with pre-calibrated sensors
- Selectable conductivity temperature compensation on/off and USP alarm capabilities
- Multi-level password protection against accident accidental changes
- Transmitter Configuration Tool (TCT) software included, for fast, simple and consistent transmitter programming via USB port

M300 Water: Versatile and User-Friendly

For a Wide Range of Applications and Industries

The multi-parameter M300 Water transmitter line for digital or analog conductivity/resistivity, pH/ORP, dissolved oxygen and ozone measurements offers exceptional measurement performance with excellent user ergonomics.
The high contrast black and white touchscreen display together with the harmonized menu structure for all parameters provides clear indication, with trending capabilities, facilitates navigation while ensuring easy, user-friendly operation.
On-line diagnostics information, such as the Dynamic Lifetime Indicator, allows operators to schedule sensor maintenance or replacement. The clearly visible diagnostic information tells you when it's time to do maintenance or calibration of sensors with Intelligent Sensor Management (ISM) technology.
The integrated USB interface allows for data logging or storage of the configuration on a USB flash drive.

Specifications

Power supply	80 to 255 VAC, or 20 to 30 VDC, 10 VA
Frequency for AC	50 to 60 Hz
Current output	2 × 0/4 to 20 mA (4× for dual channel), 22 mA alarm (according to Namur NE43)
Display	4.0" b/w touchscreen, 320 × 240 pixel
Languages	9 (English, German, French, Italian, Spanish, Portuguese, Russian, Japanese and Chinese)
Ambient temperature	–10 to 50 °C (14 to 122 °F)
Relative humidity	0 to 95% non-condensing
Rating	¼ DIN: IP65 (front) ½ DIN: IP65
PID controller	Yes
Control input (Hold)	1 or 2 (dual channel version)
Relays	2× SPST, 2× reed
Approvals and certificates	cULus, CE
USB interface	1× USB Host: Data logging and configuration storage on USB flash drive 1× USB Device: Software update interface

Other Highlights

– Mixed-mode functionality allows the connection of analog or digital ISM sensors
– Full ISM diagnostics available (for ISM sensors)

Features Overview

– 4.0" touchscreen interface/display
– Multi-parameter transmitter for conductivity/resistivity, pH/ORP, dissolved oxygen, and ozone
– Available as single-channel or dual-channel transmitters
– PID controller with pulse length, pulse frequency or analog control
– User management available

Accuracy	± 0.5 % of reading or 0.5 Ω, whichever is greater (analog only)		
Concentration ranges of HCl, NaOH, H_2SO_4	0–20 %, 0–15 %, 0–20 %		
TDS ranges ($CaCO_3$ and NaCl)	Cover equivalent conductivity ranges		
Calculated parameters (2-channel)	% Rejection, power plant calculations of pH based on specific and cation conductivity, and CO_2 based on cation and degassed conductivity		
Temperature compensation	Selectable as: Std (standard high purity Thornton/Light), Light 84, Std referenced to 75 °C, linear %/°C, 50 % glycol, 100 % glycol, cation, ammonia, isopropyl alcohol, none		
pH			
pH, ORP ranges	–1.00 to 15.00 pH, –1500 to 1500 mV		
Temperature range	–30 to 100 °C (–22 to 212 °F)		
Accuracy	±0.03 pH, ±2 mV		
Temperature compensation	Automatic/manual for electrode output, plus adjustable solution temperature coefficient for solution ionization effects		
Calibration	1- or 2-point, with auto buffer recognition		
Diagnostics	Selectable continuous checking of membrane resistance and reference diaphragm/junction resistance (with solution ground sensors)		
Dissolved Oxygen			
Ranges	0–20,000 ppb; 0–20 ppm, 0–200 % saturation; resolution 0.1 ppb		
Temperature compensation	Automatic, for membrane permeability and oxygen solubility		
Accuracy	±1 % of reading or ±1 ppb, system accuracy		
Dissolved Ozone			
Ranges	0–5,000 ppb, 0–5 ppm; resolution 0.1 ppb		
Temperature compensation	Automatic, for membrane permeability and ozone solubility		
Accuracy	±2 % of reading or ±3 ppb, system accuracy		
Temperature			
Range	–40 to 200 °C (–40 to 392 °F); resolution 0.1°		
Accuracy	±0.25 °C (±0.45 °F)		
Resolution	0.01 °C for conductivity; 0.1 °C for all other parameters		
PID Control			
Display	Auto/manual status and %–output on bottom line of display		
Settings	Auto/manual, setpoint, deadband, non-linear corner points, control limits, proportional gain, integral reset time (min), derivative rate time (min)		
Manual station	Controlled by up/down arrow keys in manual mode; remote auto/manual selection by discrete input		
Control output types	One or two analog signals, relays-pulse frequency, or relays-pulse length		

* stainless steel sensors 0.02 to 3,000 µS/cm

M800 Multi-Parameter, Multi-Channel Transmitter
Touch the Future

The M800 transmitter series features premium Intelligent Sensor Management (ISM) technology measuring conductivity/resistivity, TOC, pH/ORP, optical and amperometric, dissolved oxygen, dissolved ozone. The multi-parameter transmitter accepts any compatible combination of ISM sensors. Up to four channels of process measurement plus two pulse flow measurements provides immediate Plug and Measure installation and operation, predictive sensor maintenance and dynamic lifetime status. The color touchscreen ensures intuitive operation, with user selectable control and alarm management. One model available with PROFIBUS-DP digital communications. ALCOA-compliant data integrity option available (M800 Water 2-channel RecordLOC).

Features Overview
- Color touchscreen
- Intuitive operation
- Premium ISM functionality
- Multi-parameter measurement
- 2-channel/4-channel versions
- iMonitor predictive diagnostics
- User management and logbook
- Trend display
- Data Integrity option

Other Highlights
- 8 current outputs, 8 output relays
- Traffic light coded sensor status
- 2 PID process controller
- Ethernet/IP model
- PROFINET model
- PROFIBUS-DP model
- IP66 rated, cULus Type 4X

Specifications

Performance	
Measurement parameters	Conductivity/resistivity, TOC, pH/ORP, dissolved oxygen, ozone, temperature and flow
ISM	Advanced diagnostics (Dynamic Lifetime Indicator, Adaptive Calibration Timer, CIP/SIP counter etc.) iMonitor
Conductivity/Resistivity	
Conductivity ranges (C = cell constant)	**2-electrode sensor:** C = 0.1: 0.01 to 50,000 µS/cm (20 Ω × cm to 50 MΩ × cm) C = 0.1 sanitary: 0.01 to 3,000 µS/cm (333 Ω × cm to 50 MΩ × cm) C = 0.01: 0.001 to 500 µS/cm (2,000 Ω × cm to 500 MΩ × cm) **4-electrode sensor:** 0.01 to 1,000 mS/cm (1.0 Ω × cm to 0.1 MΩ × cm)
Temperature measuring range	–40 to 200 °C (–40 to 392 °F)
Temperature compensation	Auto/selectable as: Std. (standard high purity water Thornton/Light), Light 84, Std. pure water referenced to 75 °C, linear %/°C (adjustable), 50 % glycol, 100 % glycol, cation, ammonia, isopropyl alcohol, none
TOC	
Measurement range	0.05–2000 ppbC (µgC/L)
pH	
pH range	–1 to 15
ORP input range	–1500 to 1500 mV
pH resolution	Auto/0.001/0.01/0.1/1 (can be selected)
Temperature measuring range	–30 to 150 °C (–22 to 302 °F)
Temperature compensation	Auto/manual/STC
Oxygen	
Range (amperometric)	0 to 10,000 ppb (µg/L)
Range (optical)	0 to 5,000 ppb (µg/L)
Oxygen resolution	Auto/0.001/0.01/0.1/1 (can be selected)
Temperature compensation	Auto
Ozone	
Operating range	0–5,000 ppb (µg/L); 0–5.0 ppm (mg/L) short term; 0–500 ppb (µg/L); 0–0.5 ppm (mg/L) continuous

General Specifications

Power supply	100 to 240 VAC, or 20 to 30 VDC, 12 VA
AC frequency	50 to 60 Hz
Current (analog) outputs	8 × 0/4 to 20 mA, 22 mA alarm
Bus communications	Ethernet/IP, PROFINET, PROFIBUS-DP
User interface	Color touchscreen 5.7", Resolution 320 × 240 px, 256 colors
Languages	10 (English, German, French, Italian, Spanish, Portuguese, Russian, Japanese, Korean and Chinese)
Ambient temperature	–20 to 50 °C (–4 to 122 °F)
Relative humidity	0 to 95 %, non-condensing
Rating	IP 66 (when back cover is attached), cULus Type 4X
PID process controller	2
Hold input	Yes
Control input	Yes
Alarm contact	Yes (alarm delay 0 to 999 s)
Relays	Mechanical rated at 250 VAC, 3 Amps (Relay 1 NC, Relay 2 to 4 NO); 4 – SPDT Type Reed 250 VAC or DC, 0.5 Amps (Relay 5 to 8)
Setpoints	High, low, between, outside, USP, EP

21CFR RecordLOC

Multi-parameter Data Integrity for Electronic Records

21CFR | **RecordLOC™**

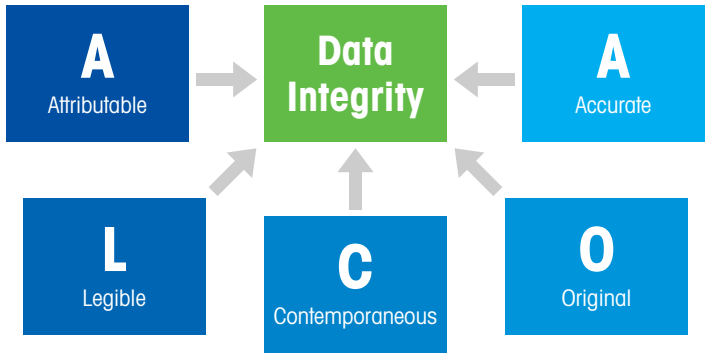
RecordLOC™ is the METTLER TOLEDO solution for ALCOA-compliant electronic records with data integrity for TOC, conductivity and ozone. Paired with an M800 Water 2-channel RecordLOC transmitter and any of the above mentioned sensors, RecordLOC provides audit trail controlled data integrity to your water system.

Features/Benefits

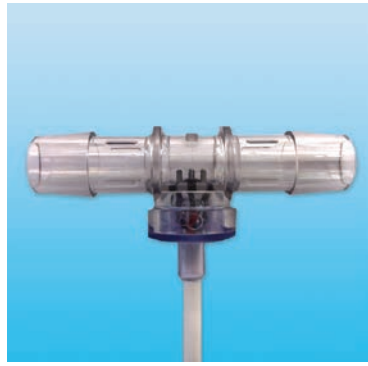
– Easy to install and maintain on a PC
– Provides ALCOA-compliant data integrity
– Three-level user accounts including Super User, Admin and User
– Encrypted and password protected audit trail
– Data is stored on a local PC, not on the transmitter for ease of access
– Multi-language support for your global organization

Requires M800 Water 2-channel RecordLOC transmitter (30 656 182) and any of the supported sensors including 6000TOCi, PureO_3 and UniCond.

To download RecordLOC for free, visit:
www.mt.com/RecordLOC



ALCOA is used in regulated industries as a framework to ensure that data is reliable and accurate.



Downstream Process Analytics

for Biopharmaceutical Applications

Single-Use Pressure Sensor

Simplify Your Pressure Measurements

Pendotech has developed a line of Single-Use Pressure Sensors that offer an accurate and cost-effective solution for measuring pressure in biopharmaceutical processes.

Reliable Cost-effective Pressure Measurement
Single-Use Pressure Sensors measure static and dynamic pressure of gases and liquids in your biopharmaceutical processes – accurately and cost effectively.

Simplified Maintenance
Robust enough to be repeatedly cleaned and inexpensive enough to be utilized in single-use applications, our Single-Use Pressure Sensors deliver a dependable alternative to stainless steel pressure transducers.

High Measurement Stability
The sensors feature Pendotech High Accuracy Pressure (MEMS-HAP) Chips and are perfect for filtration and chromatography processes as well as monitoring of single-use bioreactors, filling operations and more. They are available in caustic-resistant polysulfone to withstand sanitization processes.

Versatile
Single-Use pressure sensors, which are qualified for use up to 5.17 bar (75 psi), are compatible with PressureMAT monitor/transmitter, Process Control Systems or other pre-qualified third-party monitors.

PREPS-N-050

PREPS-N-1-1

PressureMAT Monitor

Application	Description
Filtration system pressure monitoring	Single-Use Pressure Sensors can be used to monitor the TMP pressure in filtration systems to detect filter plugging and automatically adjust flow rates.
Chromatography system pressure monitoring	Single-Use Pressure Sensors can be used to monitor the pressure in chromatography systems, which is important to detect over pressurization and ensure optimal performance of the column.
Filling operations pressure monitoring	Single-Use Pressure Sensors can be used to monitor the pressure in filling operations, which is important for ensuring that the filling process is operating effectively.
Bioreactor pressure monitoring	Single-Use Pressure Sensors are crucial for monitoring pressure in bioreactors. They help detect over-pressurization due to plugged vent filters which can lead to hazardous situations and loss of product.
Other bioprocess applications	Single-Use Pressure Sensors can also be used in other bioprocess applications, such as centrifugation, virus inactivation and diafiltration.

Transmitter selection
Pendotech PressureMAT™ transmitters are available to work with our Single-Use Pressure Sensors including the Pressure Sensor Transmitter (known as the PT card).

Sensor selection:

Hose barb connections
These connections are quick and easy to make, making them a good choice for applications where frequent connections and disconnections are required. They are also recommended for pre-assembled, pre-sterilized, single-use tubing and bag assemblies.

Sanitary flange connections
These connections are more secure than hose-barb connections, and they are less likely to leak. They are also easier to clean and sterilize, which is important in the biopharmaceutical industry. However, they are more expensive and time-consuming to install.

Luer connections
These connections are the smallest and most compact of the three types. They are often used in applications where space is limited. However, they are not as secure as other types of connection.

Validation
100 % tested for accuracy and leaks during manufacturing. Available in polycarbonate or caustic resistant polysulfone materials. Certificate of Quality included with lot certification; individual NIST Certificates are optional.

Integration flexibility
The Single-Use Pressure Sensors can be integrated with a variety of systems, including: The PressureMAT monitor/ transmitterm Process Control Systems and third-party monitors.

Single-Use Pressure Sensors come in a variety of sizes starting at 1/8 inch hose barb to 1 ½ inch sanitary flange

Single-Use Pressure Sensor

Simplify Your Pressure Measurements

The Single-Use pressure sensors measure static and dynamic pressure of gases and liquids in your processes accurately and cost effectively. They are perfect for filtration and chromatography processes, monitoring of gases and single-use bioreactors, filling operations and more. They feature the High Accuracy Pressure (MEMS-HAP) chips inside. The sensors connect to monitors via an integral connector. Suitable transmitters include PressureMAT monitor/transmitter, a Process Control System, or other pre-qualified third-party monitors. They can be non-invasively tested in-place with the Pendotech PressureChecker. They are the alternative cost effective solution for use with tubing to the existing stainless steel pressure transducers on the market.

Specifications

Accuracy	Positive Range	Specification
	0 to 0.41 bar (0 to 6 psi)	±2 % of reading
	0.41 to 2.07 bar (6 to 30 psi)	±3 % of reading
	2.07 to 4.14 bar (30 to 60 psi)	±5 % of reading
	Vacuum Range	Specification
	0 to – 0.48 bar (0 to –7 psi)	±3 % of reading
	– 0.48 to – 69 bar (–7 to –10 psi)	±5 % of reading
Pressure Range	0.79 to 5.2 bar (– 11.5 to 75 psi)	
Biocompatibility	All materials in contact with product fluid path meet USP Class VI requirements, both pre and post irradiation	
Regulatory and Compliance Testing	• USP Class VI	• USP 661
	• ISO 10993-5	• Bioburden
	• ADCF	• REACH Compliant
	• Particulates	• Endotoxin
	• Bacteriostatis and Fungistatis (B&F)	• RoHs Compliant
Manufacturing Environment	ISO 9001 certified facility, Class 7 clean room	
Gamma Irradiation	Up to 50 kiloGrays	
X-ray Irradiation	Up to 50 kiloGrays	
Operating Temperature	2 °C to 40 °C (5.6 °F to 104 °F) other ranges with process qualification	
Storage Temperature	– 25 °C to 65 °C (– 13 °F to 149 °F)	
Input/Output Impedence	270 Ohms to 400 Ohms	
Excitation Voltage	2.5 to 10 volts DC (for best long term stability, use a lower excitation voltage)	
Sensor Output	0.2584 mV/Volt/psi	
Connector	Rating: IP67 when connected to reusable cable	
Shelf Life	5 years	
Packaging	White Tyvek and clear pouch with easy-open chevron seal; box of 25 sensors in polyethylene bags (except sterile sensors are not in polybags)	

Features Overview

- Available in hose-barb connections, sanitary flange & luer connections
- Can be cleaned and re-used
- Unobstructed flow path provide reduced hold-up volume
- Available in polycarbonate or caustic resistant polysulfone materials
- Certificate of Quality included with lot certification; individual NIST Certificates are optional
- Can be non-invasively tested in-place via test port

Luer Sensor

Did You Know

The Pressure Sensors are 100 % tested for critical quality attributes.

- Each sensor is leak tested on the liquid side at 60 psi to confirm integral assembly
- Sensors with a test port are leak tested on the test port side to confirm proper atmospheric reference
- Each sensor is tested electrically to confirm proper electrical performance
- Each sensor is tested to be accurate at 4.14 bar (60 psi) within ±5 % of reading (±0.21bar/-3.0 psi)

PressureMAT Sensor Transmitter

Designed for Single-Use Pressure Sensors

RoHS CE UKCA

Features Overview

– Portable and lightweight
– Interfaces with pumps, valves, and PCs
– Displays Delta-Pressure or TMP (PMAT3 and PMAT4)
– Measures total flow volume (PressureMAT PLUS)
– Interfaces with other sensors with a 4–20 mA output (PressureMAT PLUS)
– Transmitter function delivers a 4–20 mA output signal
– RS-232 data output for data collection

Other Highlights

– Perfect for use with filtration and chromatography processes, as well as bioreactor pressure monitoring
– Data output capability to a PC or control system
– User configurable min/max set-points with alarm output signal Panel mount option with IP66 NEMA4X Front Panel
– High Resolution (HR) model available for low pressure applications that achieves 10× the accuracy of the standard unit
– IQ/OQ Protocol available

www.pendotech.com/pressuremat

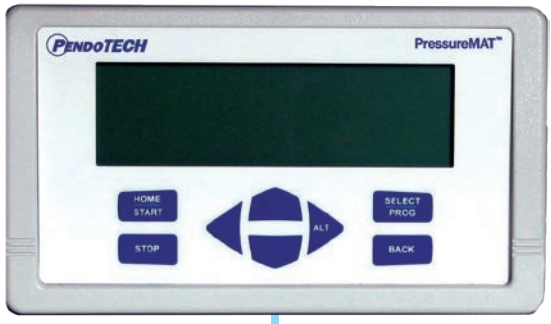
The PressureMAT (PMAT) and the PressureMAT PLUS are both monitor, alarm, and transmitter units designed for use with the Single-Use Pressure Sensors. These lightweight, portable units can easily be moved around a lab or pilot plant to the location where pressure measurement is required. The transmitters use state of the art, solid state electronics, which require no calibration or maintenance. The output options simplify integration to PCs or higher level control systems, and a relay switch enables interfacing with pumps and valves. Options include models with up to four pressure sensor inputs. The PMAT3 and PMAT4 models can optionally display Delta-Pressure of P1-P2 or trans-membrane pressure (TMP) for filtration processes. These calculated values can also have alarm set-points and the values can be transmitted.

The PressureMAT PLUS system is comprised of the monitor with user interface, and connectors on the back panel where input and output components can be interfaced. It has the ability to measure total flow volume in addition to flow rate. The models with an analog input can be used to interface other sensors with a 4–20 mA output, such as temperature, UV, conductivity, pH and turbidity.

Both systems have an alarm function where minimum and maximum values are entered on the key pad and if the process value goes below the minimum setting or above the maximum setting, the system will go into an alarm state. The alarm state may be tied to the relay output to help safeguard the integrity of a process. The transmitter function delivers a 4–20 milliamp output signal corresponding to the process values on the display. The RS-232 data output to a PC is available for data collection to the PMAT Data Acquisition Software.

There are numerous applications in biopharmaceutical production processes where these units can be used to monitor pressure, including filtration, chromatography, bioreactor monitoring, perfusion, and fill finish operations.

PressureMAT



PressureMAT PLUS

Connect up to 4 Pressure Sensors

- **4–20 mA** → Control System
- **RS-232** → PC
- **Relay** → Pump, valve or alarm

Up to 4 Pressure Sensors | **Temperature Sensor** | **UV Absorbance Sensor** | **Flow Meter** | **Turbidity Sensor**

- **4–20 mA** → Control System
- **4–20 mA Inputs**
- **Relay** → Pump, valve or alarm
- **RS-232** → PC

Did You Know

The PressureMAT-S is a portable monitor, alarm, and transmitter ideal for applications which are space limited and require for only 1 sensor. The PressureMAT-S also provides the option for remote tare.

Did You Know

PressureMAT Sensor Transmitter, with a DIN rail mounting design, connects to the Single-Use Pressure sensor and produces a 4–20mA signal linear with pressure, offering five options for optimal performance based on pressure range.

Specifications

Enclosure (PMAT)	WXDXH 19.96 × 11.35 × 5.72 cm (7.86 × 4.47 × 2.25 in) Approx Weight: 0.65 kg (1.3 lbs) Material: ABS Plastic IP66/NEMA 4X front panel; panel and wall mount optional
Enclosure (PMAT-S)	11.94 × 11.94 × 5.72 cm (4.70 × 4.70 × 2.25 in) Approx Weight: 0.39 kg (0.86 lbs)
Keypad	8 button keypad with LEXAN® overlay
Display	8 line LCD backlit blue, pressure displayed as X.XX bar/X.X psi; PMAT2HR & PMAT-SHR X.XXX bar/X.XXX psi
Power Inlet	2.5 mm (0.04 in) Circular Power Jack (center post positive) or D9 12–24 VDC, 4 watts (powered by wall supply)
Pressure Sensors Input (s) Models offered with 1-4 inputs	Range of –0.793 bar to 5.171 bar (–11.5 to 75.0 psi) PMAT2HR & PMAT-SHR -0.0483 bar to 0.510 bar (–0.7 to 7.5 psi) Configured for Single-Use Pressure Sensors, Connector: DA15 (includes 3.657 m (12 ft) reusable cables)
Relay Outputs(s) [Up to 4 outputs available as a combination of Relay and Analog outputs]	Specifications for relay used for the alarm output: • Normally CLOSED or OPEN via wiring • 28 Volt AC/DC Maximum • 1 amp closure, 2 amps maximum current • 20 millisec max turn on/off time Configured for Single-Use Pressure Sensors, Connector: DA15 (includes 3.657 m (12 ft) reusable cables)
Analog Output(s) [4-20 mA] [Up to 4 outputs available as a combination of Relay and Analog outputs]	Screw terminal connector 4–20 mA Range: –0.689 bar to 5.171 bar (–10 to 75 psi) PMAT2HR & PMAT-SHR –0.069 bar to 0.207 bar (–1 to 3 psi) Accuracy: 0.1 % of full scale Sourcing with Maximum Load: 400 ohms Load Impedance: Zero Ohm minimum resistance, 22 mA maximum output
RS232 Output	Data output to a PC at frequency up to approx every 2 seconds Optional Internal Data Logger: Part# PDKTP-DLOG (logger not available with PMAT-S)
Regulatory Compliances	CE Mark EN61326-1:2013; EN61010-1:2010; EN/ISO13489-1:2009; EN60204-1:2009 FCC Part 15 Class B verified FCC Part 68 5TUUSA-23969-DT-E RoHS and REACH Compliant UL Listed

Single-Use Conductivity Sensor

Simple, Accurate, Reliable

Features Overview

– Pre-determined cell constant
– Optional one-point calibration
– Range: 0.1 to 100 mS/cm
– Accuracy: ±0.1 mS/cm from 0.1 to 2 mS/cm
– Built-in temperature compensation
– Easy to use and maintain
– Affordable and cost-effective

Efficient and Affordable Conductivity Measurement

Single-Use Conductivity Sensors provide precise and cost effective measurement of the conductivity of liquids in your biopharmaceutical processes.

Ease of Maintenance

Our Single-Use Conductivity Sensors are sturdy enough to withstand repeated cleaning, yet affordable enough to be used in single-use applications. They offer a reliable alternative to stainless steel conductivity sensors, simplifying maintenance and reducing costs.

Measurement

No calibration required because of predetermined cell constant and also optional one-point calibration by user

Compatibility and Resistance

Measure conductivity and temperature.
Fluid path materials
– Gamma & X-ray irradiation compatible
– NaOH resistant
– USP Class VI

Calibration-Free Conductivity

The Single-Use Conductivity Sensor is a reliable and accurate tool for measuring conductivity in a variety of applications. It is designed for single-use, which eliminates the need for calibration and maintenance. This makes it a cost-effective and convenient solution for biopharmaceutical manufacturing and chemical processing.

The sensor has a pre-determined cell constant, which means that it is ready to use immediately. It also has an optional one-point calibration feature, which allows users to calibrate the sensor for specific applications. The sensor has a range of 0.1 to 100 mS/cm and an accuracy of ±0.1 mS/cm from 0.1 to 2 mS/cm. It also has built-in temperature compensation to ensure accurate readings over a wide range of temperatures.

The sensor is easy to install and use, even in harsh or corrosive environments. It is also durable and sterile, making it ideal for use in biopharmaceutical and other sterile applications. The sensor is also affordable, making it a cost-effective solution for a variety of applications.

www.pendotech.com/conductivity

Application	Description
Buffer Preparation	Monitor the conductivity to ensure that the final buffer solution meets specification.
Chromatography	Monitoring buffer conductivity prior to the chromatography column to protect the product by diverting out of specification product.
UF/DF	Monitor the diafiltration process to ensure buffer exchange endpoints are met.

Did You Know

The CT-2 Conductivity Sensor Transmitter is a DIN rail mounted device that connects to a Single-Use Conductivity Sensor and produces a 4–20 milliamp signal that is linear with conductivity. It calculates the normalized value at 25 °C (77°F) and transmits it via the 4–20 mA signal in the range of 0–150 mS.

Sensor Specifications

Accuracy	From 0.1 to 2mS/cm ±0.1mS/cm; 2 to 50mS/cm ±5 % of reading; 50 to 100mS/cm typically ±5 % of reading
Pressure Range	75 psi max
Biocompatibility	All materials in contact with product fluid path meet USP Class VI requirements, both pre and post gamma exposure
Manufacturing Environment	ISO 9001 certified facility; Class 5
Operating Temperature	2 °C to 50 °C (35.6 °F to 122 °F) - other ranges with process qualification because thermistor reads to 70 °C (158°F)
Temperature Accuracy	Better than 0.2 °C (0.36 °F) - typical better than 0.1 °C (0.18 °F)
Temperature Element	Thermistor with resistance @ 25 °C (77 °F) of 2252 ohm
Gamma Irradiation	Up to 50 kiloGrays
X-ray Irradiation	Up to 50 kiloGrays
ADCF Status	All fluid path materials are animal derived component free
Connector	Custom molded water-tight 4 pin connector Rating: IP67 when connected to reusable cable and dust cover
Shelf life	3 years
Packaging	Sealed in vapor barrier bag inside polybag

Single-Use In-line pH Sensor

Hassle-free pH measurement

1/4 inch Hose barb

¾ inch Sanitary Flange

In downstream bioprocessing operations, monitoring and controlling the pH of a solution is critical to maintaining the stability and efficacy of large biomolecules. A pH sensor is a valuable tool used to determine the acidity or alkalinity of a solution. The electrochemical pH probe is a widely used method for measuring pH in these types of operations.

The PendoTECH Single-Use In-line pH Sensor is a cutting-edge device that is designed for both Good Manufacturing Practice (GMP) operations and process development applications. This sensor comes pre-calibrated with values for slope offset and zero point constant, eliminating the need for process calibration. It is designed for applications where in-line sensing is necessary and is compatible with gamma irradiation. The sensor also has full traceability on materials and qualification of biocompatibility. It combines METTLER TOLEDO InSUS 307 pH probe technology with a single-use flow cell designed by PendoTECH.

Available in two sizes as a pre-assembled product, it is an ideal choice for downstream processing applications where real-time, in-line measurements are necessary.

Sensor Performance Specifications

pH Range	pH 3 to pH 10
Slope (pH 7 to pH 4 buffer)	Min –57.8 mV/pH (98 %)
Zero-point (In pH 7 buffer)	7.20 ± 0.25pH
Accuracy under defined laboratory conditions	± 0.10 pH for ± 1.50 pH units around the calibration point after 1-point process calibration (adjustment of inline reading to an offline pH measurement of a grab sample)
Response Time	t90 % < 20s between pH 4 to 7
Operating Temperature Range	5 to 60 °C (41 to 140°F)
Operating Pressure Range	4 Barg at 25 °C (77 °F)* 2 Barg at 40 °C (104 °F)** 1 Barg at 60 °C (140 °F)**
Membrane Glass Resistance	300…900 MOhm
Glass Type	pH-Sensitive glass membrane
Temperature Compensation (T.C.)	Via built-in Pt 1000
Shelf life	12 months PT-PH-S-5-5, PT-PH-S-025 24 months with available coating on the reference system PT-PH-L-5-5, PT-PH-L-025

Features Overview

Single-use pH sensor combining METTLER TOLEDO InSUS 307 pH probe technology with single-use flow cell designed by Pendotech

– Designed for applications where in-line sensing is necessary
– Compatible with gamma irradiation
– No process calibration required
– Designed for use with existing METTLER TOLEDO transmitters

* This specification was determined and validated by Pendotech. Testing and validation data regarding this claim are on file.

**This specification is provided by the original manufacturer (PT-PH1 pH Sensor).

www.pendotech.com/ph

Benefits

- Provides accurate and reliable pH measurement in downstream bioprocessing operations
- Real-time measurement of pH helps to maintain stability of large biomolecules in a specific pH range
- Rapid response time helps to capture rapid shifts in pH due to process changes
- Calibration values printed on probe for easy entry into pH monitor, eliminating need for calibration with buffers
- Closed system operation is not impacted, as there is no need to expose pH sensor to buffer standards
- It may be re-used, however, in applications where cross contamination is to be avoided.

The sensor/flow cell combination is designed specifically and optimized for in-line measurements:

- It is ideal for processes where cleaning the probe is not practical post use
- Has a rapid response to change in pH conditions

Application	Description
Upstream processing	Monitoring and control of pH in fermentation and cell culture processes, viral inactivation, and media/buffer preparation.
Downstream processing	Monitoring and control of pH in purification and product recovery processes, viral inactivation, buffer preparation, and protein refolding.
Quality control	Testing of the final product to ensure that it meets pH specifications.
Research and development	Development of new biopharmaceutical products and processes.

Single-Use UV Flow Cells & PM2 Photometer

Ensuring Accuracy, One Measurement at a Time

The PM2 Photometer is a versatile tool for both lab and process applications, available in benchtop and panel mount versions for easy integration into various systems. It comes with seven factory-configurable wavelength combinations, including 260nm, 280nm, 300nm, 880nm, 260–280nm, 280–300nm, and 280–880nm.

Designed to work with a monitor possessing data acquisition capabilities, the PM2 Photometer can be used with Pendotech solutions like PressureMAT PLUS models for data logging via a PC, or Process Control Systems.

The photometer provides two 4–20mA signals spanning 0 to 3AUs as output, allowing for continuous monitoring. It also features a local display for direct reading. The output signals can be connected to other data acquisition devices or higher-level control systems like PLCs and HMIs for data collection and integration into larger control systems.

The PM2 Photometer supports digital communication protocols such as Modbus over RS485 and Modbus-TCP over Ethernet for device monitoring, control, and network communication. This makes the PM2 Photometer a flexible solution for bioprocess monitoring due to its adaptability and compatibility with various systems.

Features Overview

- Dual functionality for lab and panel mount
- Versatile instrument for lab and process applications
- Factory configured with seven different wavelength combinations
- Designed to be integrated into a monitor with data acquisition capability
- Two 4–20mA output signals spanning 0 to 3AUs
- Local display for viewing readings directly from the instrument
- Compatible with a variety of data acquisition devices and control systems
- Supports digital communication protocols

Photometer Specifications

Optical Configuration	LED light source
Optical Connectivity	SMA-905
Mechanical	10.2 cm (4 in) W × 10.2 cm (4 in) L× 6.4cm (2.5 in) H Weight: ~0.68kg (~1.5 lbs)
Max. supply voltage fluctuations	±10 % of DC supply voltage
Overvoltage Category	Category I
Power Requirement	24VDC nominal, 2.7W max power
Output	4-20mA (Active/sourcing) spanned 0-3AU
Analog Loop Resistance	500ohms at 24VDC
Alarm Relay	Max. 48VDC, Max. 1A
Operating Temperature	5 to 50 °C (41 to 122 °F)
Storage Temperature	–20 to 50 °C (–4 to 122 °F)
Operating Altitude	Max. 5000m above sea level
Humidity	20–80 % relative humidity, non-condensing
Measurement Range	0.000–3.00AU
Response Time	1 second
Maximum Zero Shift	±0.1 % full scale (±0.002AU)
Accuracy*	0-2AU ±1 %FS (±0.03AU) ; 2–3AU ±2 %FS (±0.06AU)
Long Term Output Drift	±0.1 % full scale (±0.002AU)
Precision/Repeatability	±0.5 % full scale (±0.015AU)
LED Lifetime	> 5 years
Emission Range	240–1000 nm
Regulatory	RoHS3, REACH, CE, UKCA

* Accuracy is dependent on system arrangement and proper tare

www.pendotech.com/uv

Flow Cell Shown ½ inch hosebarb with 1 cm path length

Flow Cell Installed with Tubing

Optical Couplers Installed to Flow Cell

6.5 cm Single-Use Turbidity Flow Cell

Other Highlights

– Non-invasive measurement
– Real-time monitoring
– Cost-effective
– Durable
– Versatile
– Easy to use

Pendotech's Single-Use Flow Cells allow non-invasive measurements using a unique silica glass lens. The fluid to be measured flows between the lenses via tubing attached to the flow cell ports. They come in various sizes and path lengths, with the largest recommended for turbidity applications. The 6.5 cm flow cell is ideal for turbidity measurements below 400 NTU, while the 1cm flow cell is suitable for applications above 400 NTU. These low-cost flow cells are perfect for single-use applications but can be cleaned and reused. They meet USP Class VI standards and can be gamma and x-ray irradiated up to 50KGy and autoclaved up to 121 °C (249°F).

UV Absorbance

In bioprocess operations, UV absorbance is used to detect specific molecules, typically at 280 nm, using a spectrophotometer or photometer. The Single-Use UV Flow Cell and UV PM2 Photometer offer a non-invasive method for this. The flow cell, connected to the PM2 system with fiber optic cables, uses special silica glass lenses to pass light through the sample. The sample flows between the lenses via tubing attached to the flow cell. This low-cost flow cell is ideal for single-use applications but can also be cleaned and reused.

Turbidity

Turbidity, the relative clarity of a liquid, is caused by suspended solids scattering light. It is measured by the difference in light emitted from a source and received by a detector, typically using near-infrared light at 880 nm. The standard unit is the Nephelometric Turbidity Unit (NTU). In bioprocess operations, turbidity post-filtration indicates filter performance on unclarified material from a bioreactor. The Turbidity System, which includes a photometer, flow cells, and cables, can measure turbidity online. The Single-Use Flow Cell eliminates the need for cleaning.

Single-Use Flow Cell Specifications

Material	Polysulfone and fused silica with silicone O-ring
Pressure range	Rated for pressure up to 5 bar (75 psi)
Biocompatibility	All materials in contact with product fluid path meet USP Class VI requirements
Manufacturing Environment	ISO 7 clean room
Gamma Irradiation	Up to 50 kiloGrays
X-ray Irradiation	Up to 50 kiloGrays
Operating temperature	2 °C to 50 °C (35.6 °F to 122 °F) (other ranges with process qualification)
Storage temperature	-25 °C to 65 °C (–13 °F to 149 °F)
Shelf Life	>5 years

Single-Use Temperature Sensors
Accurate Temperature Measurement

Pendotech Single-Use Temperature Sensors measure temperature in your processes accurately and cost effectively. They are low cost for single-use applications where elimination of cross-contamination is required yet robust enough to be repeatedly cleaned and re-used. They are designed for in-line use and perfect for filtration and chromatography processes, filling operations, and general process monitoring. These sensors connect to monitors via a re-usable cable. Suitable monitors include the handheld unit TEMP-340, a Process Control System, or other pre-qualified third-party monitors. Also, a stand-alone transmitter is available with a 4 to 20mA analog output. They are the alternative solution for use with tubing to the existing temperature measurements devices on the market.

Specifications

Accuracy	Hose-barb and flange sensors: Better than ±0.2 °C (0.36 °F) (typical better than 0.1 °C (0.18 °F) Luer: Better than ±0.4 °C (0.72 °F) (typical better than 0.2 °C (0.36 °F)
Temperature range	0 to 70 °C (0 to 158 °F)
Biocompatibility	Hose-barb and flange sensors: all polymeric materials in contact with product fluid path meet USP Class VI requirements
Manufacturing environment	ISO 9001 certified facility; Class 5
Gamma irradiation	Up to 50 kiloGrays^
X-ray irradiation	Up to 50 kiloGrays^
Resistance @ 25 °C	2252ohm
Connector	Custom molded 2 contact connector (different versions for luer and hose-barb versions)l
Pressure range	Up to 5.2 bar (75 psi)
Shelf life	5 years
Monitor Cable	Hose-barb: 3 m (10 ft) with 0.64 cm (¼ in) headphone plug to connect to monitor receptacle

^ At this gamma dose there is a shift in the accuracy in the range of 0 to 2 °C to ±0.5 °C and in the range of 50 to 70 °C to ±0.5 °C.

Features Overview

– Adaptable fittings
– No obstruction
– Luer fitting
– Temperature sensing element
– No calibration required

www.pendotech.com/temperature

Sensor Features

To optimally adapt to tubing, the sensors are available with either a hose-barb fitting , a 1 inch sanitary flange, or a luer fitting. The hose-barb and flange sensor designs imparts no obstruction on the fluid path that can cause a pressure drop. There is no dead-leg at the point where the temperature is measured. The luer fitting can be connected to a variety of fittings that can securely adapt to tubing or other devices. The temperature sensing element is a thermistor. No calibration is required because the temperature versus resistance for the thermistor element is well-defined within the specified accuracy range. Within the electrical instrument, the measured resistance is converted to the temperature. A disposable dip probe is also available to measure temperature within a vessel.

TEMP-340 Handheld Monitor

Connection to Monitors

The hose-barb and flange sensors and dip probe connect to the monitor via a 3 m (10 ft) long re-usable cable. One end has a molded connector to connect to the sensor connector and the other end has a ¼ inch headphone plug commonly used by many commercially available monitors. The luer sensor has a custom molded connector on the 2.1 m (7 ft) long re-usable monitor cable that is quickly secured to the temperature sensor. There is an alignment guide on the sensor that prevents it from being connected improperly. Disconnection of the cable connector from the sensors is quick and easy and the monitor indicates the sensor has been disconnected.

Ordering Information

Sensor	Order Number
Single-use temperature sensor, non-sterile, polysulfone, stainless steel sensor, 0.318 cm (1/8 in) hose barb	TEMPS-N-012
Single-use temperature sensor, non-sterile, polysulfone, stainless steel sensor, 0.64 cm (¼ in) hose barb	TEMPS-N-025
Single-use temperature sensor, non-sterile, polysulfone, stainless steel sensor, 0.95 cm (3/8 in) hose barb	TEMPS-N-038
Single-use temperature sensor, non-sterile, polysulfone, stainless steel sensor, 1.28 cm (½ in) hose barb	TEMPS-N-050
Single-use temperature sensor, non-sterile, polysulfone, stainless steel sensor, 1.90 cm (¾ in) hose barb	TEMPS-N-075
Single-use temperature sensor, non-sterile, polysulfone, 2.54 cm (1 in) sanitary flange	TEMPS-N-1-1
Single-use temperature sensor with luer fitting	TEMPC-N-999
Accessories for Sensors	
3 m (10 ft) re-usable temperature sensor cable with ¼ phone jack term. for hose barb sensors	PDKT-650-TEMPB
2.1 m (7 ft) re-usable temperature sensor cable with ¼ phone jack term. for luer sensors	PDKT-650-TEMPL
30.48 cm (12 in) re-usable temperature sensor cable with M8 termination for hose barb sensors	PDKT-TEMPB-PNL
Temperature sensor monitor for 1 sensor with built-in data logger and RS-232 data output	TM-TEMP-340
Temperature Sensor Transmitter	TT1
Temperature Sensor Transmitter DIN Rail Mounting Kit	TT1-DR
Temperature Sensor Benchtop Transmitter with 4–20mA output in ABS plastic box with 24 VDC wall supply (for 1 sensor)	PDKT-TT1
Temperature Sensor Benchtop Transmitter with 4–20mA output in ABS plastic box with 24 VDC wall supply (for 2 sensors)	PDKT-TT2
Temperature Sensor Benchtop Transmitter with 4–20mA output in ABS plastic box with 24 VDC wall supply (for 4 sensors)	PDKT-TT4
Cable from PDKT-TT1 temperature transmitter to PressureMAT analog input, 2 m (6 ft)	PDKT-TT1-PMAT
Cable from PDKT-TT2 temperature transmitter to PressureMAT analog input (2×), 2 m (6 ft)	PDKT-TT2-PMAT
Analog display with 4 inputs with alarm inputs and serial port for data collection	PMAT-DAQ
Analog display with 4 inputs, 4 analog outputs, alarms, and serial port for data collection	PMAT-DAQ-A
Cable from PDKT-TT4 to PMAT-DAQ, 4 analog signals, 1.2 m (4 ft)	PDKT-TT4-PDAQ
0.64 x 0.64 cm (¼ in × ¼ in) polycarbonate straight connector with luer port	PDKT-103-03
0.95 x 0.95 cm (3/8 in × 3/8 in) polycarbonate straight connector with luer port	PDKT-104-03
1.27 x 1.27 cm (½ in × ½ in) polycarbonate straight connector with luer port	PDKT-105-03
Male x female x female luer tee, polycarbonate	PDKT-000-03
Male x female x female luer tee, polypropylene	PDKT-000-04

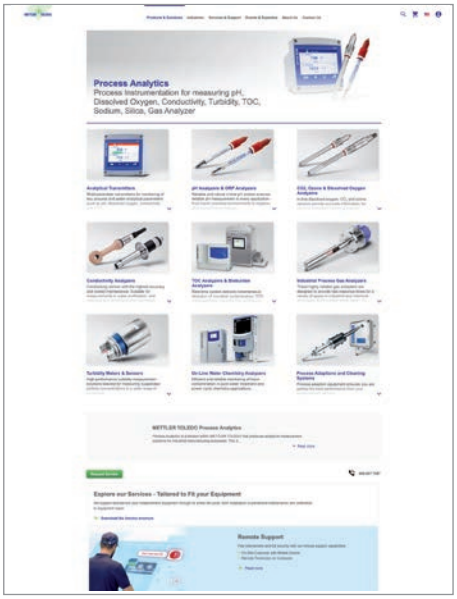
The Information You Want
is at www.mt.com/pro

The METTLER TOLEDO Process Analytics website contains a vast amount of up-to-date information on all our products and services. Content is localized for your country and tailored to suit your selections. Simple layout allows you to quickly find the information and features you are looking for.



Visit our website for fast and competent information.

- Learn about our most recent product developments
- Register for free webinars
- Request further information on products and services
- Obtain a quote quickly and easily
- Download our latest white papers
- Read case studies relevant to your industry
- Access buffer and electrolyte solution certificates
