

Thermostatic Control Valves From Fluid Power Energy:

A Superior Choice For Boiler Protection.

Fluid Power Energy (FPE), an ISO 9001-2000 Certified Company, was established in 1975 with one goal in mind: To provide high quality, economically-priced Thermostatic Control Valves for the Industrial Equipment, Industrial Engine, Industrial Compressor and HVAC Markets. With more than 30 years of experience in the industry, FPE has established itself as a leader in its field.

Thermostatic Control Valves from FPE are the effective solution for boiler protection. Our three-way valves used in the mixing application will provide the temperature control on the return water needed to avoid the damage caused by condensation and thermal shock.

FPE valves feature a temperature control element pre-set to the desired temperature at the factory, eliminating both the need of setting the temperature at installation as well as eliminating tampering after installation. Our valves are inexpensive, responsive, effective, consistent and durable. They also feature low pressure drop, no electrical hook-up and are tamper-proof.

Features

**Wide Range of
Temperatures**

Heavy-Duty

Self-Contained

Replaceable Element

Non-Adjustable

Rugged Construction

Tamper-Proof

Operate in Any Position

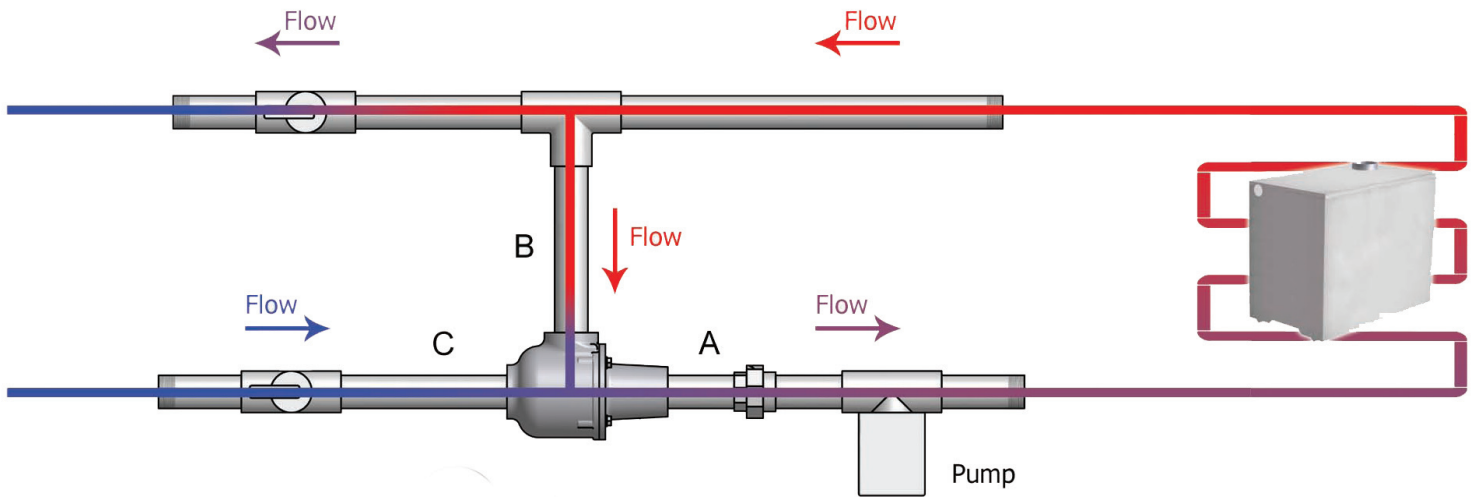

Compact
